Why not? Because it is a disgusting, filthy, and wrong approach. A normal
person cannot bear to consider the thought of buggery. It is SICK!

3. Charge NiMH inside VR-120D - here's how

Newsgroup: rec.radio.scanner
Date: 2003-08-01 04:01:51 UTC
From: scosgt@worldnet.att.net

Source record: 27604

OK, the VR-120D has an internal charging circuit hooked up to the charger base. BUT, it is only intended to charge the proprietary Yaesu battery pack.
Inside the battery compartment, there is a metal tab, which connects to the NEGATIVE charging terminal on the bottom of the case, and to a post on the Yaseu battery pack.
After checking the theory with a voltmeter, I simply ran a VERY short jumper from the metal tab to the negative battery terminal spring (less than 1/4")
no soldering - just pop the battery back in to hold it together.
VOILA
Red light on charger lights up, batterys charge!
Don't care if I ruin some batterys, been buying 1800 NiMH for $40.00 for 50 batterys!
AND
So far I have run a 120 for days on these between charges, and the batterys NEVER run down!
While the radio can be run from the optional AC adaptor, it can not be run from the charger - get all kinds of noise on the programmed freqs, makes scanning impossible.
The manual DOES say you can run from the AC adaptor, is silent on the subject about the charging base. So I guess now we know.

Sleeping with the enemy
Joe Conason - The New York Observer

07.30.03 - Now that America knows who was responsible for those 16 misleading words about African uranium -- namely anybody except the man who uttered them -- perhaps the time has come to move on to other pertinent issues of war and terror. Now, perhaps, we should inquire about another dubious premise underlying the pre-emptive invasion of Iraq: the insistence by the President and his associates that Saddam Hussein's regime provided support to Al Qaeda and conspired with Osama bin Laden against the United States.

That incendiary charge is again under scrutiny, following the partial release of the report prepared by the House and Senate intelligence committees after last year's joint investigation of the Sept. 11 attacks. While the government censored critical portions of the Congressional report, leaks did emerge about the redacted section concerning "foreign support" for the hijackers. Those leaks indicate that such support came from officials and "businessmen" linked to the kingdom of Saudi Arabia -- and not from Iraq.

Such a finding might be expected to perturb the citizens who accepted White House insinuations about the supposed connection between Iraq and Islamist terror. Polls indicate that this accusation thoroughly pervaded public consciousness; many if not most Americans even believed that the hijackers were of Iraqi origin. Nearly all were Saudis, of course.

Nevertheless, the President and members of his cabinet repeatedly warned that Saddam Hussein would someday provide Al Qaeda with the most deadly weapons ever made, creating the imminent threat of an immense atrocity far worse than Sept. 11.

As Mr. Bush put it, "Iraq could decide on any given day to provide a biological or chemical weapon to a terrorist group or individual terrorists. Alliance with terrorists could allow the Iraqi regime to attack America without leaving any fingerprints." In his famous Oct. 7, 2002, speech in Cincinnati, the President stated: "We've learned that Iraq has trained Al Qaeda members in bomb-making and poisons and deadly gases."

Was any of that terrifying rhetoric based in truth? Leaving aside the fact that American and British forces have so far discovered no poisons or deadly gases in occupied Iraq, let alone nuclear weapons, the available evidence offers no solid proof of a conspiracy between Iraq and Al Qaeda. Moreover, the President and his aides had every reason to know that they were misleading us on this question.

Classified material in the National Intelligence Estimate prepared by the C.I.A. last year cast doubt on the ties between Al Qaeda and Iraq, and also noted how unlikely it was that Saddam Hussein would deliver his most lethal weapons to terrorists. According to C.I.A. director George Tenet, the consensus reflected in the National Intelligence Estimate was that Saddam Hussein would foment a terrorist strike only as an "extreme" final act of revenge for an American invasion. So the White House kept Mr. Tenet's full report in the top-secret file, where the doubts expressed by the C.I.A. director couldn't interfere with the drive toward war.

The urge to conceal embarrassing secrets never abates. So last week, when the joint Congressional committee released its report on Sept. 11, the chapter on foreign support for the terrorists was blacked out at the insistence of the White House. The ostensible reason was to prevent worsening relations with Saudi Arabia, since the report examined financial and other ties between the kingdom's agents and two of the hijackers.

According to sources quoted widely in the mainstream media, the Congressional probers discussed the activities of Saudi nationals residing here who assisted hijackers Khalid Almihdhar and Nawaf Alhazmi. One of the suspect Saudis was an employee of the kingdom's civil-aviation authority named Omar Al-Bayoumi. Suspected by the F.B.I. of terrorist ties as early as 1998, Mr. Bayoumi had paid the security deposit on the hijackers' San Diego apartment and found them an English translator. Another Saudi national with connections to a Saudi charity is suspected of providing financial aid to the conspirators. The report's declassified sections quote U.S. officials complaining about the kingdom's lack of cooperation with investigations of the hijackers.

Imagine what the President would have said -- or would say now -- if the C.I.A. or the F.B.I. had discovered such intimate connections between the hijackers and agents of Iraq.

Apparently, there were so few clues to Iraqi links with the Sept. 11 hijackers that the Congressional report doesn't even mention the subject. Yet we're supposed to believe that the deposed regime of Saddam Hussein was deeply involved with Al Qaeda -- and that the kingdom of Saudi Arabia is our friend and ally.

On July 29, Mr. Bush refused the Saudi foreign minister's request to declassify the 28 pages of the Congressional report that pertain to the kingdom. The President said he doesn't want to "compromise" the ongoing investigation of the terror attacks. Full disclosure might also compromise other important interests -- including his own political future.

Editorial: Bait and switch / The neocon case for war in Iraq

Published July 31, 2003 ED31

In an appearance Tuesday before a skeptical Senate Foreign Relations Committee, Deputy Defense Secretary Paul Wolfowitz declared that "the peace in Iraq is now the central battle in the war on terror." That same refrain has begun to pop up in statements by President Bush and Vice President Dick Cheney -- as well as the neoconservative thinkers and writers who provide the intellectual framework for this administration's approach to foreign and defense policies. It begins to get down to the bedrock rationale for going to war in Iraq.

Strands of that rationale have been around for years, but they weren't given public emphasis -- not in the 2000 presidential campaign and not in the prewar debate about whether to invade Iraq. If you piece together those strands, the rationale, prewar, went like this:

Saddam Hussein is a brutal tyrant who routinely thumbs his nose at the United States. His interest in weapons of mass destruction -- if not his possession of them -- is well-established, meaning he may become a threat to the United States and its friends at some point. Moreover, he is in violation of numerous U.N. Security Council resolutions. The United States can make a case for ousting him by military force -- a case that can't be made for any other Middle East leader. So Saddam's the guy.

Removing Saddam will do a number of positive things. In his place the United States and friends can build a peaceful, prosperous, democratic, secular state in Iraq. That in turn will be a powerful catalyst for promoting change and reform throughout the Islamic world. Oppressive, corrupt regimes will become vulnerable because people across the region will want what the Iraqi people now have. And Islamic reform is key to removing the conditions that breed terrorism.

There's also what is called the "flypaper" or "magnet" effect, to which Bush spoke with his famous "Bring 'em on" statement. The idea is that the presence of tens of thousands of American military personnel on the ground in Iraq will make them a magnet for terrorists from around the world. It will pull terrorists away from Israel and the United States to Iraq, where U.S. forces can safely engage them in full-fledged combat and defeat them.

Those American forces also are likely to embolden reformist elements next door in Iran, threatening the rule of the oppressive, America-hating mullahs. On the other side of Iraq, in Syria, terrorist groups such as

Hezbollah are likely also to get the message that they'd best behave, lest they too get whacked by the Americans.

That's the neocon theory, and there is evidence that pieces of it are indeed working. But pieces are not: Witness the warning that also came Tuesday of a new airliner hijacking threat in the United States and overseas. Note also that in his appearance before the Senate committee, Wolfowitz and others declined repeated efforts by frustrated Democrats and Republicans to estimate the cost of occupying Iraq, how long it might take or even how many troops it might require.

"Oh, come on now," responded Sen. Joseph Biden, D-Del., the ranking Democrat. "Does anyone here at the table think we're going to be down below 100,000 forces in the next calendar year? When are you guys starting to be honest with us?"

The larger question is why those guys weren't honest with Congress and the American people before the war started. Why did they focus almost exclusively on the supposedly imminent threat posed by Saddam Hussein's weapons of mass destruction? Why not lay out their far more nuanced, ambitious neocon theory about projecting American values into the Middle East and thus beginning a regional transformation? Wolfowitz has said the WMD rationale was chosen for "bureaucratic" reasons; it was the one factor everyone could agree on.

But other neocon writers hint it was for a different reason: They knew they couldn't sell their vision -- not to traditional conservatives, as George Will has made clear; not to most liberals, and not to the nonideological middle which would balk at the cost in dollars and human life. So they gussied up the "imminent threat" posed by Iraq's WMD programs and rode that argument into war.

The neocon theory is interesting and complex. It's like a new theory for solving a scientific question. New theories need grueling examination by peers who try to knock holes in them before they are accepted as the basis for action. They also need to be explained, patiently and with precision, so the public can know what it is being asked to purchase with the lives if its kids and its money.

The neocon foreign policy agenda got neither a thorough vetting nor public explication -- because its authors apparently thought the American people wouldn't understand it or wouldn't buy it. Instead, the neocons pulled a classic, and very arrogant, bait and switch. Sooner or later, they're going to pay for it.

Leaders of Iraq Weapons Search Brief Senators
Thu July 31, 2003 11:50 AM ET
By Tabassum Zakaria

WASHINGTON (Reuters) - U.S.-led experts have not found any weapons of mass destruction in Iraq but have uncovered documents pointing to a program to develop such weapons, U.S. officials said, as the two men leading the hunt on Thursday briefed senators on their efforts.

Former U.N. weapons inspector David Kay and Army Maj. Gen. Keith Dayton were testifying at closed-door hearings of the Senate Armed Services Committee and the Senate Intelligence Committee.

Kay was sent by the CIA to Iraq as a special advisor to develop a strategy for finding alleged weapons of mass destruction. Dayton, director of operations for the Pentagon's Defense Intelligence Agency, heads the Iraq Survey Group searching for evidence of chemical, biological and nuclear weapons in Iraq.

U.S. officials, speaking on condition of anonymity, said Kay and Dayton had not come up with a "smoking gun" in the search for such weapons even after investigators spoke with key Iraqi scientists, but have found evidence of weapons programs.

The United States went to war in March saying Iraq posed an imminent threat because it possessed large amounts of weapons of mass destruction. No such weapons have been found since the government of Saddam Hussein was toppled in April.

A defense official said members of the Iraq Survey Group "have come across information of a variety of types -- through interrogation of people, conversations with people, (and) documents that have been recovered that clearly point to a WMD program."

"One document will lead us to someplace else, or name people. Then we'll try to go find those people," the official said.

Some of the information from some of the lower-level Iraqis "has proved very fruitful -- not led us to any buried 'smoking gun,' so to speak, but certainly has given a lot of insight into how they moved things around and when they did," the official added.

Sen. Bob Graham, a Florida Democrat and 2004 presidential candidate, said at a news conference he hoped evidence of Iraqi weapons programs would be

found.

"If we do not find weapons of mass destruction and we do not find that they were positioned in a way for imminent use, the credibility of the United States government abroad and the credibility of the United States government with its own people here in the United States will be significantly eroded," Graham said.

The Iraq Survey Group, with roughly 1,500 personnel, is staffed mostly by Americans, but with some British and Australians, the official said. It took over the search for such weapons in June.

The Australians are leading the document-reviewing effort, the official said, while British military officer John Deverell serves as Dayton's deputy.

The official said members of the group are speaking with Iraqis knowledgeable about Iraq's weapons programs, including numerous scientists.

"Certainly the case is being built that, no doubt in anybody's mind, they had a program," the official said. "We have good documents. We have come across documentation of their program."

But the past existence of Iraq chemical and biological weapons is not in dispute. The Iraqis used chemical weapons in the 1980s against Iranian troops and against Iraqi Kurdish civilians. And Iraqi officials admitted to the United Nations in 1995 the existence of a biological arms program.

Ex-Diplomat Joseph Wilson: Bush May Start Another War in 2004 To Win The Election
Wednesday, July 30th, 2003

http://www.democracynow.org/article.pl?sid=03/07/30/1513221
Former U.S. Ambassador to Iraq Joseph Wilson predicts the situation in Iraq will deteriorate so much over the next year Bush may resort to start another war in order to win the 2004 election. Wilson is the retired diplomat who visited Niger in a CIA-sponsored trip last year during which he determined the alleged Iraq-Niger uranium deal was bogus. His conclusion was ignored by the Bush White House.

Retired U.S. diplomat Joseph Wilson is accusing the White House of orchestrating a smear attack against him and his wife. Wilson gained headlines earlier this month when he revealed that he had personally traveled to Niger in 2002 in a CIA-financed trip to investigate any nuclear link between the African nation and Iraq. Wilson set off a firestorm of debate when he told the media, the White House and CIA were both warned in 2002 of his findings.

Wilson now says the White House deliberately leaked to the press that his wife, Valerie Plame, is a covert CIA operative thus damaging her career and compromising past missions.

Writing on the Nation website, David Corn points out that whoever within the Bush administration outted Wilson's wife may have committed treason. Disclosing information that identifies covert agents violates the Intelligence Identities Protection Act of 1982. Plame's identify was first revealed in a column by conservative Robert Novak who said government officials leaked him the information.

The Best Democracy Money Can Buy: Part I
Greg Palast - GregPalast.com

07.24.03 - "The guts for Michael Moore's opening screed on how Bush 'stole' the 2000 election," writes the Village Voice, "came from investigative reporter Greg Palast, whose own book, The Best Democracy Money Can Buy, has fast become a cult fave among progressives." Now, WorkingForChange brings you an exclusive serialization from Palast's New York Times bestseller. Over the next two weeks, you can get your daily dose of Palast's opening chapter, "Jim Crow in Cyberspace" -- which we will interrupt only to bring you BBC reporter Palast's latest comments -- on Liberia, on Iraq and on the economic wars at home.

This series is part of the WorkingForChange campaign, in cooperation with Martin Luther King III of the Southern Christian Leadership Conference, to prevent the theft of the presidential election of 2004. With each excerpt we are including links to sign onto the WorkingForChange/King petition.

JIM CROW IN CYBERSPACE: The Unreported Story of How They Fixed the Vote in Florida

From the book, The Best Democracy Money Can Buy (Penguin 2003) by Greg Palast

In the days following the presidential election, there were so many stories of African Americans erased from voter rolls you might think they were targeted by some kind of racial computer program. They were.

I have a copy of it: two silvery CD-ROM disks right out of the office computers of Florida Secretary of State Katherine Harris. Once decoded and fed into a database, they make for interesting, if chilling, reading. They tell us how our president was elected-and it wasn't by the voters.

Stop the Florida-tion of the 2004 election!

Here's how it worked: Mostly, the disks contain data on Florida citizens-57,700 of them. In the months leading up to the November 2000 balloting, Florida Secretary of State Harris, in coordination with Governor Jeb Bush, ordered local elections supervisors to purge these 57,700 from voter registries. In Harris's computers, they are named as felons who have no right to vote in Florida.

Thomas Cooper is on the list: criminal scum, bad guy, felon, attempted voter. The Harris hit list says Cooper was convicted of a felony on January 30, 2007. 2007?

You may suspect something's wrong with the list. You'd be right. At least 90.2 percent of those on this "scrub" list, targeted to lose their civil rights, are innocent. Notably, over half-about 54 percent-are Black and Hispanic voters. Overwhelmingly, it is a list of Democrats.

Secretary of State Harris declared George W. Bush winner of Florida, and thereby president, by a plurality of 537 votes over Al Gore. Now do the arithmetic. Over 50,000 voters wrongly targeted by the purge, mostly Blacks. My BBC researchers reported that Gore lost at least 22,000 votes as a result of this smart little blackbox operation.

The first reports of this extraordinary discovery ran, as you'd expect, on page one of the country's leading paper. Unfortunately, it was in the wrong country: Britain. In the USA, it ran on page zero-the story was simply not covered in American newspapers. The theft of the presidential race in Florida also grabbed big television coverage. But again, it was the wrong continent: on BBC Television, broadcasting from London worldwide-everywhere, that is, but the USA.

Was this some off-the-wall story that the British press misreported? Hardly. The chief lawyer for the U.S. Civil Rights Commission called it the first hard evidence of a systematic attempt to disenfranchise Florida's Black voters. So why was this story investigated, reported and broadcast only in Europe, for God's sake? I'd like to know the answer. That way I could understand why a Southern California ho'daddy like me has to commute to England with his wife and kiddies to tell this and other stories about my country.

In this chapter, I take you along the path of the investigation, step by step, report by report, from false starts to unpretty conclusions. When I first broke the story, I had it wrong. Within weeks of the election, I said the Harris crew had tried to purge 8,000 voters. While that was enough to change the outcome of the election (and change history), I was way off. Now, after two years of peeling the Florida elections onion, we put the number of voters wrongly barred from voting at over 90,000, mostly Blacks and Hispanics, and by a wide majority, Democrats.

That will take us to the Big Question: Was it deliberate, this purge so fortunate for the Republicans? Or just an honest clerical error? Go back to the case of Thomas Cooper, Criminal of the Future. I counted 325 of these time-traveling bandits on one of Harris's scrub lists. Clerical error? I dug back into the computers, the e-mail traffic in the Florida Department of Elections, part of the secretary of state's office. And sure enough, the office clerks were screaming: They'd found a boatload like Mr. Cooper on the purge list, convicted in the future, in the next century, in the next millennium.

The jittery clerks wanted to know what to do. I thought I knew the answer. As a product of the Los Angeles school system, where I Pledged my Allegiance to the Flag every morning, I assumed that if someone was wrongly accused, the state would give them back their right to vote. But the Republican operatives had a better idea. They told the clerks to blank out the wacky conviction dates. That way, the county elections supervisors, already wary

of the list, would be none the wiser. The Florida purge lists have over 4,000 blank conviction dates.

You've seen barely a hair of any of this in the U.S. media. Why? How did 100,000 U.S. journalists sent to cover the election fail to get the vote theft story (and preferably before the election)?

The Best Democracy Money Can Buy: Part II
Greg Palast - GregPalast.com

07.25.03 - "The guts for Michael Moore's opening screed on how Bush 'stole' the 2000 election," writes the Village Voice, "came from investigative reporter Greg Palast, whose own book, The Best Democracy Money Can Buy, has fast become a cult fave among progressives." Now, WorkingForChange brings you an exclusive serialization from Palast's New York Times bestseller. Over the next two weeks, you can get your daily dose of Palast's opening chapter, "Jim Crow in Cyberspace" -- which we will interrupt only to bring you BBC reporter Palast's latest comments -- on Liberia, on Iraq and on the economic wars at home.

This series is part of the WorkingForChange campaign, in cooperation with Martin Luther King III of the Southern Christian Leadership Conference, to prevent the theft of the presidential election of 2004. With each excerpt we are including links to sign onto the WorkingForChange/King petition.

Silence of the Media Lambs: The Unreported Story of How They Fixed the Vote in Florida

Part 2, from the book, The Best Democracy Money Can Buy (Penguin 2003) by Greg Palast

[In the opening excerpt from Palast's book we learned that five months before the November 2000 election, Governor Jeb Bush of Florida and his Secretary of State, Katherine Harris, moved to purge 57,7000 people from the voter rolls, supposedly criminals not allowed to vote. Almost every one was innocent of crimes -- though the majority were guilty of being African American. BBC reporter Palast asks, "How did 100,000 US journalist sent to cover the election fail to get this vote theft story?"]

Investigative reports share three things: They are risky, they upset the wisdom of the established order and they are very expensive to produce. Do profit-conscious enterprises, whether media companies or widget firms, seek extra costs, extra risk and the opportunity to be attacked? Not in any business text I've ever read. I can't help but note that Britain's Guardian and Observer newspapers, the only papers to report this scandal when it broke just weeks after the 2000 election, are the world's only major newspapers owned by a not-for-profit corporation.

But if profit lust is the ultimate problem blocking significant investigative reportage, the more immediate cause of comatose coverage of the election and other issues is what is laughably called America's "journalistic culture." If the Rupert Murdochs of the globe are shepherds of

the New World Order, they owe their success to breeding a fiock of docile sheep -- snoozy editors and reporters content to munch on, digest, then reprint a diet of press releases and canned stories provided by government and corporate public-relations operations.

Take this story of the list of Florida's faux felons that cost Al Gore the presidential election. Shortly after the U.K. story hit the World Wide Web, I was contacted by a CBS TV network news producer eager to run a version of the story. The CBS hotshot was happy to pump me for information: names, phone numbers, all the items one needs for your typical quickie TV news report. I freely offered up to CBS this information: The office of the governor of Florida, Jeb Bush, brother of the Republican presidential candidate, had illegally ordered the removal of the names of felons from voter rolls -- real felons who had served time but obtained clemency, with the right to vote under Florida law. As a result, another 40,000 legal voters (in addition to the 57,700 on the purge list), almost all of them Democrats, could not vote.

Stop the Florida-tion of the 2004 election!

The only problem with this new hot info is that I was still in the midst of investigating it. Therefore, CBS would have to do some actual work -- reviewing documents and law, obtaining statements.

The next day I received a call from the producer, who said, "I'm sorry, but your story didn't hold up." And how do you think the multibillion-dollar CBS network determined this? Answer: "We called Jeb Bush's office." Oh.

I wasn't surprised by this type of "investigation." It is, in fact, standard operating procedure for the little lambs of American journalism. One good, slick explanation from a politician or corporate chieftain and it's case closed, investigation over. The story ran on television, but once again, in the wrong country: I reported it on the BBC's Newsnight. Notably, the BBC is a publicly owned network -- I mean a real public network, with no "funds generously provided by Archer Mobil Bigbucks."

Let's understand the pressures on the CBS TV producer that led her to kill the story simply because the target of the allegation said it ain't so. The story demanded massive and quick review of documents, dozens of phone calls and interviews -- hardly a winner in the slam-bam-thank-you-ma'am school of U.S. journalism. Most difficult, the revelations in the story required a reporter to stand up and say that the big-name politicians, their lawyers and their PR people were freaking liars.

It would be much easier, a heck of a lot cheaper and no risk at all to wait for the U.S. Civil Rights Commission to do the work, then cover the commission's report and press conference. No one ever lost their job writing canned statements from a press release. Wait! You've watched Murphy Brown so you think reporters hanker to uncover the big scandal. Bullshit. Remember, All the President's Men was so unusual they had to make a movie out of it.

The Election Fix Story Steals Into the States

In London the Guardian and Observer received about two thousand bless-you-Britain-for-telling-us-the-truth-about-our-elections letters from U.S. Internet readers circulating the samizdat presidential elections coverage. I also received a few like this:

You pansey brits seem to think that the average American is as undereducated and stupid as the average british subject..Well comrad [sic], I'm here to tell you . . . . . .which ended with some physically unfeasible suggestions of what to do with the Queen (figure 1.1).

My Observer report went to print within three weeks of the election. The vote count in Florida was still on. Watching the vote-count clock ticking, Joe Conason, the most determined of American investigative reporters, insisted to his editors at Salon.com, the Internet magazine, that they bring my story back to America. Salon posted "Florida's Ethnic Cleansing of the Voter Rolls" to the Net on December 4, 2000. It wasn't exactly "print," but at least it was American. Still, not one U.S. news editor called, not even from my "sister" paper, the Washington Post, with whom the Guardian shares material and prints an international weekly.

From a news perspective, not to mention the flood of site hits, this was Salon's biggest politics story ever -- and they named Part I their political story of the year. But where was Part II? On their Web site and on radio programs the magazine was announcing Part II would appear in two days... and in two days... and in two days... and nothing appeared. Part II was the story blown off by the CBS Evening News about an additional 40,000-plus voters whom Jeb Bush barred from voting. The fact that 90 percent of these 40,000 voters were Democrats should have made it news... because this maneuver alone more than accounted for Bush's victory.

I was going crazy: Gore had not yet conceded... the timing of Part II was crucial. Where the hell was it? Finally, an editor told me, "The story doesn 't check out. You see, we checked with Jeb Bush's office and they said..."

Argh! It was dï¿½jï¿½ vu all over again.

Another staffer added, as a kind of explanation, "The Washington Post would never run this story."

Well, he had me there. They hadn't, they didn't. Not yet. At least Salon helped me sneak the first report past the border patrols. So God bless America.

While waiting for the United States to awaken, I took my BBC film crew to Florida, having unearthed a smoking-gun document: I had a page marked "confidential" from the contract between the State of Florida and the private company that had purged the voter lists. The document contained cold evidence that Florida knew they were taking the vote away from thousands of innocent voters, most of them Black.

It was February. I took my camera crew into an agreed interview with Jeb Bush's director of the Florida Department of Elections. When I pulled out the confidential sheet, Bush's man ripped off the microphone and did a fifty-yard dash, locking himself in his office, all in front of our cameras.

It was killer television and wowed the British viewers. We even ran a confession from the company that was hired to carry out the purge operation. Newsworthy? Apparently not for the United States.

My program, BBC Newsnight, has a film-trading agreement with the ABC television network. A record twenty thousand Net-heads in the United States saw the BBC Webcast; and several banged on the door of ABC TV's Nightline to run our footage, or at least report what we found. Instead, Nightline sent its own crew down to Florida for a couple of days. They broadcast a story that ballots are complex and Blacks are not well educated about voting procedures. The gravamen of the story was, Blacks are too frigging dumb to figure out how to vote. No mention that in white Leon County, machines automatically kicked back faulty ballots for voter correction; whereas in Gadsden County, very Black, the same machines were programmed to eat mismarked ballots. That was in our story, too.

Why didn't ABC run the voter purge story? Don't look for some big Republican conspiracy. Remember the three elements of investigative reporting: risk, time, money. Our BBC/Guardian stories required all of those, in short supply in U.S. news operations.

Finally, in February, my Part II -- the report that was too scary and difficult for Dan Rather's show -- found asylum in the Nation magazine, that distant journalistic planet not always visible to the naked eye.

And then, mirabile dictu, the Washington Post ran the story of the voter purge on page one, including the part that "couldn't stand up" for CBS and Salon . . . and even gave me space for a bylined comment. Applause for the Post's courage! Would I be ungrateful if I suggested otherwise? The Post ran the story in June,though they had it at hand seven months earlier when the ballots were still being counted. They waited until they knew the findings of the U.S. Civil Rights Commission Report, which verified BBC's discoveries, so they could fire from behind that big safe rock of Official Imprimatur. In other words, the Post had the courage to charge out and shoot the wounded.

Part 3 next week: 'A Black-List Burning for Bush'

The Best Democracy Money Can Buy: Part III
Greg Palast - Greg Palast.com

07.28.03 - "The guts for Michael Moore's opening screed on how Bush 'stole' the 2000 election," writes the Village Voice, "came from investigative reporter Greg Palast, whose own book, The Best Democracy Money Can Buy, has fast become a cult fave among progressives." Now, WorkingForChange brings you an exclusive serialization from Palast's New York Times bestseller. Over the next two weeks, you can get your daily dose of Palast's opening chapter, "Jim Crow in Cyberspace" -- which we will interrupt only to bring you BBC reporter Palast's latest comments -- on Liberia, on Iraq and on the economic wars at home.

This series is part of the WorkingForChange campaign, in cooperation with Martin Luther King III of the Southern Christian Leadership Conference, to prevent the theft of the presidential election of 2004. With each excerpt we are including links to sign onto the WorkingForChange/King petition.

A Black-List Burning for Bush: The Unreported Story of How They Fixed the Vote in Florida

Part 3, from the book, The Best Democracy Money Can Buy (Penguin 2003) by Greg Palast

[In the opening excerpt from Palast's book we learned that five months before the November 2000 election, Governor Jeb Bush of Florida and his Secretary of State, Katherine Harris, moved to purge 57,7000 people from the voter rolls, supposedly criminals not allowed to vote. Almost every one was innocent of crimes -- though the majority were guilty of being African American. Palast's discovery of the ethnic cleansing of the voter rolls, which gave George Bush the White, was front page news in Britain, where Palast reports for the Guardian papers. But the report remained hidden from Americans.]

How did British newspapers smell the Florida story all the way across the Atlantic? At the time, I was digging into George Bush Sr.'s gold-mining business [Bush's gold mines? see Chapter 2 of The Best Democracy Money Can Buy>], when English newshound Solomon Hughes caught a note on the Mother Jones Internet bulletin board flagging a story in the Palm Beach Post printed months before the election. The Post's back pages mentioned that 8,000 voters had been removed from the voter rolls by mistake. That's one heck of a mistake. Given the Sturm und Drang in Florida, you'd think that an American journalist would pick up the story. Don't hold your breath. There were a couple of curious reporters, but they were easily waylaid by Florida's assurances that the "mistake" had been corrected, which the Post ran as

truth.

But what if the Florida press puppies had been wrong? What if they had stood on their hind legs and swallowed a biscuit of bullshit from state officials-and the "mistakes" had not been corrected?

It was worth a call.

From London, I contacted a statistician at the office of the county elections supervisor in Tampa. Such an expert technician would have no reason to lie to me. The question at the top of my list: "How many of the voters on the scrub list are BLACK?" And the statistician said, "You know, I 've been waiting for someone to ask me that." From his leads, I wrote "Black-Out in Florida" (The Observer, London, November 26, 2000:

Vice-President Al Gore would have strolled to victory in Florida if the state hadn't kicked up to 66,000 citizens off the voter registers five months ago as former felons. In fact, not all were ex-cons. Most were simply guilty of being African-American. A top-placed election official told me that the government had conducted a quiet review and found -- surprise! -- that the listing included far more African-Americans than would statistically have been expected, even accounting for the grievous gap between the conviction rates of Blacks and Whites in the U.S.

One list of 8,000 supposed felons was supplied by Texas. But these criminals from the Lone Star State had committed nothing more serious than misdemeanors such as drunk driving (like their governor, George W. Bush).

The source of this poisonous blacklist: Database Technologies, acting under the direction of Governor Jeb Bush's frothingly partisan secretary of state, Katherine Harris. DBT, a division of ChoicePoint, is under fire for misuse of personal data in state computers in Pennsylvania. ChoicePoint's board is loaded with Republican sugar daddies, including Ken Langone, finance chief for Rudy Giuliani's aborted Senate run against Hillary Clinton.

When the Observer report hit the streets (of London), Gore was still in the race. Columnist Joe Conason pushed his bosses at Salon.com to pick up my story and take it further. But that would not be easy. The Texas list error -- 8,000 names -- was corrected, said the state. That left the tougher question: What about the 57,700 other people named on that list?

The remaining names on the list were, in the majority, Black -- not unusual in a nation where half of all felony convictions are against African Americans. But as half the names were Black, and if this included even a tiny fraction of innocents, well, there was the election for Bush. The question was, then, whether the "corrected" list had in fact been corrected. Finding the answer would not be cheap for Salon. It meant big bucks; redirecting their entire political staff to the story and making hotshot reporters knuckle down to the drudgery of calling and visiting county elections offices all over Florida. But they agreed, and our Salon team came back with a mother lode of evidence proving that, by the most conservative analysis, Florida had purged enough innocent Black voters -- several thousand -- to snatch the presidency from Al Gore.

At that time the presidential race was wide open. Word was, Gore's camp was split, with warriors fighting the gray-heads of the Establishment who were pushing him to lie down and play dead, advice he'd ultimately follow. Just before we hit the electronic streets with it, someone called a key player in the White House and Gore's inner circle about the story Salon would soon break.

The Big Insider said, "That's fantastic! Who's the reporter?" The tipster said, "This American, he's a reporter in Britain, Greg Palast."

Mr. White House Insider replied, "Shit! We hate that guy." But that's another story.

On December 4, 2000, I wrote, "Florida's Ethnic Cleansing of the Voter Rolls," printed in Salon.com. It began:

If Vice President Al Gore is wondering where his Florida votes went, rather than sift through a pile of chads, he might want to look at a "scrub list" of 57,700 names targeted to be knocked off the Florida voter registry by a division of the office of Florida Secretary of State Katherine Harris. A close examination suggests thousands of voters may have lost their right to vote based on a flaw-ridden list of purported "felons" provided by a private firm with tight Republican ties.

How did we know the "felons" were innocent? We asked a county elections official, Linda Howell, of Madison County, Florida. In March 2000, Harris sent the supervisor a list of criminals -- and Ms. Howell's own name was on it.

"I was very upset," Howell said. "I know I'm not a felon." Howell, a white Republican, refused to remove her own name from the voter rolls and threw out the Harris list. In another county, an elections official restored the rights of one "felon" on the list -- a local judge.

But not everyone on the list was treated so delicately.

"We did run some number stats and the number of Blacks [on the list] was higher than expected for our population," says Chuck Smith, a statistician for Hillsborough County. Smith was concerned that African-Americans made up 54 percent of the people on the original felons list, though they constitute only 11.6 percent of the county's voting population. He challenged the state on this but was told by Harris' office that since most criminals are Black the figure was not surprising.

On the Hillsborough list, in hundreds of cases, names of felons and voters did not match, nor birthdates, nor even gender. Smith added that the ChoicePoint computer program automatically transformed various forms of a single name. In one case, a voter named "Christine" was identified as a felon based on the conviction of a "Christopher" with the same last name. Smith says ChoicePoint would not respond to queries about its proprietary methods. Nor would the company provide additional verification data to back its fingering certain individuals in the registry purge.

By the rules established by Harris' office, a voter is assumed guilty and convicted of a crime and conviction unless and until they provide documentation certifying their innocence. Some had been convicted of a misdemeanor and not a felony, others were felons who had had their rights restored and others were simply cases of mistaken identity. While there was much about the lists that bothered Hillsborough Elections Supervisor Iorio, she felt she didn't have a choice but to use them.

Of the 3,258 names on the original list, the county concluded that more than 15 percent were in error, and tried to restore as many as possible. If that ratio held statewide, no fewer than 7,000 voters were incorrectly targeted for removal from voting rosters. Gore lost by 537 votes.

Hillsborough County's attempt to do the right thing was rare. In rural Florida, the mostly-Black purge list met little opposition.

Etta Rosado, spokeswoman for the Volusia County Department of Elections, said the county essentially accepted the file at face value, did nothing to confirm the accuracy of it and doesn't inform citizens ahead of time that they have been dropped from the voter rolls.

"When we get the con felon list, we automatically start going through our rolls on the computer. If there's a name that says John Smith was convicted of a felony, then we enter a notation on our computer that says convicted felon -- we mark an 'f' for felon -- and the date that we received it," Rosado said.

"I don't think that it's up to us to tell them they're a convicted felon," Rosado said. "If he's on our rolls, we make a notation on there. If they show up at a polling place, we'll say, 'Wait a minute, you're a convicted felon, you can't vote.' Nine out of ten times when we repeat that to the person, they say 'Thank you' and walk away. They don't put up arguments." Rosado doesn't know how many people in Volusia were dropped from the list as a result of being identified as felons.

She failed to add that in the two cases of black voters who did raise a complaint, her office threatened them with arrest if they voted and were proven later ineligible.

Florida was the only state in the nation to contract the first stage of removal of voting rights to a private company. And that company, ChoicePoint Inc. of Atlanta, had big plans. "Given the outcome of our work in Florida," said their PR spokesman, "and with a new president in place, we think our services will expand across the country."

Especially with a President named "Bush." ChoicePoint's board, executive suite and consultant rosters are packed with Republican stars, including former New York Police Commissioner Howard Safir and former ultra-Right congressman Vin Weber, ChoicePoint's Washington lobbyist.

Stop the Florida-tion of the 2004 election!

Thursday, 2 a.m., December 7, 2000. On the other end of the line, heavy breathing, then a torrent of words too fast for me to catch it all. "Vile .

. . lying . . . inaccurate . . . pack of nonsense . . . riddled with errors . . ." click! This was not a ChoicePoint whistleblower telling me about the company's notorious list. It was Choice- Point's own media communications representative, Marty Fagan, communicating with me about my "sleazy disgusting journalism" in reporting on it.

Truth is, Fagan was returning my calls. I was curious about this company that chose the president for America's voters.

They had quite a pedigree for this solemn task. The company's Florida subsidiary, Database Technologies (now DBT Online), was founded by one Hank Asher. When U.S. law enforcement agencies alleged that he might have been associated with Bahamian drug dealers -- although no charges were brought -- the company lost its data management contract with the FBI. Hank and his friends left and so, in Florida's eyes, the past is forgiven.

Thursday, 3 a.m. A new, gentler voice gave me ChoicePoint's upbeat spin. "You say we got over 15 percent wrong -- we like to look at that as up to 85 percent right!" That's 7,000 votes-plus -- the bulk Democrats, not to mention the thousands on the faulty Texas list. (Gore lost the White House by 537 votes.)

I contacted San Francisco-based expert Mark Swedlund. "It's just fundamental industry practice that you don't roll out the list statewide until you have tested it and tested it again," he said. "Dershowitz is right: they had to know that this jeopardized thousands of people's registrations. And they would also know the [racial] profile of those voters."

"They" is Florida State, not ChoicePoint. Let's not get confused about where the blame lies. Harris's crew lit this database fuse, then acted surprised when it blew up. Swedlund says ChoicePoint had a professional responsibility to tell the state to test the list; ChoicePoint says the state should not have used its "raw" data.

Until Florida privatized its Big Brother powers, laws kept the process out in the open. Just before the election, when counties asked to see ChoicePoint's formulas and back-up for blacklisting voters, they refused -- these were commercial secrets.

So we'll never know how America's president was chosen.

That's not it at all. Anybody who wants to bugger anyone else
(consensually) doesn't bother me at all as long as it's in private.
The REAL problem is that if buggery is ordained "legal" by the
government, then, US TAXPAYERS will end up footing the bill because then the
buggers will have access to all sorts of government resources paid for by
TAXPAYERS (that's me) which are currently available to only male/female
married couples.
That my friend, is the reason for this big buggery push.
The nasty by-product of making buggery "unions" legal is that, religion
aside, we will be heading down the road to a degraded society where
historical values will be deemed unimportant and our US society will
eventually go the way of Rome. That is also the goal of progressives and
liberals with regard to political goals in general; buggery is just part of
their big picture.
And that, my friend, is why EVERYONE (whether they are religious or not)
must contact their representatives in Congress to STOP IT IN IT'S TRACKS!
Stay focused on the important aspects of this issue, not your personal
disgust of it (which I share).

Today I had 7 scanners setup, each scanner setup to scan a 25 MHz segment of the 225-400 MilAir band. Everything was going fine up until 1048 hrs EDT. 5 of the 7 scanners stopped with what sounded like a data signal. Here are the freqs which had the very same transmission:
225.0000
275.0000
300.0000
325.0000
375.0000

The transmission lasted for about 3 minutes and quit. Very strong signal on all 5 freqs. Iï¿½ve done many searches using 7 scanners before and never had anything like that happen. Anyone have any ideas of what this was?

He started taking his medication again.

He feels much better.

They even let him out of the rubber room to take walks now and then

funny thing about being sane again, you realize that usenet is mostly
a big waste of time arguing with knuckle dragging troglodites.

There is a nut on another group who actually thinks that usenet
postings are read by high level government policy makers. Then he
became furious with some posters who "didn't express the correct
opinion" and caused government agencies make bad decisions and waste
money. Looks like that guy is ready for some medication too.

As we used to in college: "you should wipe the dick prints off your
lips before saying that!"

Why do you focus on the 10 percent of a relationship that is sexual
and ignore the 90 percent that is filled with loyalty and commitment?
Perhaps because in modern society, loyalty and commitment seems to
have nothing to do with marriage anymore?

And if youre interested in denying medical insurance benifits and
other relationship "perks" to homosexuals then why don't we go all the
way back and once again deny freedom, education and decent jobs to
black people? According to the logic of some who post here, that is

also costing us way too much.

I say that President Bill Clinton had the best solution for our time:
Don't ask. Don't tell.

Does this guy understand the difference between an investigation and
an arrest?

Somehow I don't have a problem with the government knowing about
people who buy books on how to build bombs. Its still legal to read
about building bombs but the moment you start to build one its time
for you to go to prison.

Do a Google search on "Ralph Boyd" sometime, Skippy. He's a
Clinton-appointed Assistant Attorney General, who stayed on with the Bush
Administration, and was the one who investigated Palast's "fixed election"
in Florida.

Mr. Boyd, who FYI is himself black, found that Palast was, in fact, LYING.

George,

I know Novice are limited to 25 Watts (PEP) for CW, RTTY, Data, MCW, Test, SSB(Phone) and Image transmissions on freqs between 222.0 - 225.0 Mhz.

What about computer interference from a AMD K6 3D and Pentium II. They operation at 375.0 Mhz.

Consider this, System-B S-Channels and Systems-G H-Channels cover a frequency range from 230.0 to 470.0 Mhz FM. You might have detected a Amateur TV Test Signal or a Marker for video surveilance.

Think farther down the road, Dwight. Saddam was using the oil wealth to build weapons of all kinds, invade its neighbors, and kill its own citizens. The world is a safer place without the old Iraq. The oil wealth will now be used to help the Iraqi people. A specific detail of Iraq's WMD efforts might have been exaggerated but the overall threat is quite real. It seems as if the United States has saved a bus load of children from driving off a bridge and dying and you are complaining that they scratched the paint in the rescue. The United States has found tremendous success restructuring the last two great and vicious dictator states, Germany and Japan, after world war II. It only makes sense to try the same policy again. If it keeps working then the USA will probably keep doing it. Also keep an eye on NATO. The soviet threat has diminished, so has the reason for NATO to exist in its present form. Watch for a shift of resources from traditional NATO countries to Iraq. The basic idea is for Iraq to become the next Japan or Hongkong, substituting peace and prosperity for death, torture and destruction. The theory is that if the Iraqi people are peaceful and prosperous then the neighboring countries will want the same for themselves. Thus peace and prosperity will spread throughout the region.

No, Saddam didn't have anything to do with 9/11 but because of 9/11 the American People now know how serious the threat is. Saddam was a major threat and was on the top of the list because Iraq is in the middle of the world's most unstable region. North Korea is also a threat but they are isolated and surrounded by many stable prosperous governments that all agree to ban nuclear weapons in Korea. The era of murderous dictators is almost over. I for one am looking forward to it.

I don't think it was interference from within my house or I would have
this problem all the time. I do searches like this several times a week
and this was the first I received the same signal every 25 MHz.....

More likely the U.S. Government.

The market for RS scanners is probably poor since they tend to carry
U.S. versions. Other dealers in Canada have versions without the cell
blocking and are most likely getting most of the business.

Dave

Clarence Thomas is also African American and a poster child for
affirmative action, as is Dubbya, votes consistently for any issue
with a whiff of affirmative action, and, further, Thomas is widely
recognized for his lack of independent voice and "me too" voting with
Scalia.

You are proposing that Boyd's race means he would stand up for
disenfranchised voters in Florida? A specious argument. And further,
you assert Boyd's "findings" include direct evidence that Palast is
lying? Where are your sources?

Here is the most common assessment of Boyd:

"Ralph F. Boyd, assistant attorney general for civil rights, told the
Senate Judiciary Committee that there were "very few voters who
actually were prevented from voting." But that doesn't square with the
numbers of complaints filed by Floridians. For instance, the Justice
Department logged 11,000 complaints from mostly African-American
voters, yet determined only 14 warranted an investigation. "

GeorgeF <3F2A7FE4.40806@licensed4funREMOVEBEFOREFLIGHT.com>...

^ ... I had 7 scanners setup, each scanner setup to scan
^ a 25 MHz segment of the 225-400 MilAir band.
^ Everything was going fine up until 1048 hrs EDT.
^ 5 of the 7 scanners stopped with what sounded like a
^ data signal.

^ Here are the freqs which had the very same transmission:
^ 225.0000
^ 275.0000
^ 300.0000
^ 325.0000
^ 375.0000

^ The transmission lasted for about 3 minutes and quit.

Did the other two scanners cover 250.0 and 350.0?

Coincidentally, while I was reading your message (abt 1825Z) I heard a loud klaxon-like sound coming from one of my scanners. By time I got over to the scanner the sound had stopped but there was still a carrier holding one of my 39MHz frequencies open. The klaxon, which did sound like a data signal, only sounded three times for a total duration of about five seconds. It's probably not related to what you heard.

>
> Frank

Probably not related as my digital signal lasted several mintues and a
much higher frequency.

How I have my multi scanner search set up is like this:
Scanner 1 searches 225-250 MHz
Scanner 2 searches 250-275 MHz
Scanner 3 searches 275-300 MHz
Scanner 4 searches 300-325 MHz
Scanner 5 searches 325-350 MHz
Scanner 6 searches 350-375 MHz
Scanner 7 searches 375-400 MHz
I'll do this search using 25 KHz steps. If I tired to search the entire
225-400 range with one scanner it would take over 70 seconds to cover
the entire range (assuming a 100 ch/sec. search speed). by braking the
range up between 7 scanner I now can search the entire MilAir band in

just 10 seconds.

Now you now why there are 16 scanners in the shack all for MilAir coverage.....And I could always use more....

Well stated and amen to that. People who have the opinion that anybody
should be able to do anything they want are not long term thinkers, or even short term
thinkers for that matter, after all it takes effort to logically think about things. I work
in the medical field and see the outcome of this kind of behavior frequently. Its not
pretty nor is it cheap and someone has to eat the cost.

Speaking of connections.... <g> Here's the new MORON list updated.....

You keep changing your nym but you can never lose that stereotypical Jersey stupidity. It hangs over you like the stench of the North Jersey chemical
plants and swamps.

All I need to know about you I learned from reading:

http://groups.google.com/groups?hl=en&lr=&ie=UTF-8&threadm=2nSdnXlNKIKMoOCjXTWcqg%40comcast.com&rnum=6&prev=/groups%3Fq%3D%2522andy%2Band%2Bbarry%2522%26hl%3Den%26lr%3D%26ie%3DUTF-8%26sa%3DN%26tab%3Dwg

The following is a list of morons.
That's all. Just morons.If you search
Google for any of these morons you
will find that they are the same rude,
antagonistic, belittling, obnoxious person
who currently posts as CrazyTaxi to this
group.

The moron list: (Now in order of highest to lowest stupidity)

Hallo,
sorry for my terrible English.
I program to change (or to upgrade) my 7030 with 7030+.
Are there important differences between two?
I refer to the general quality of listening,
to the IP2&IP3, to the noise.
The greatest number of memories or the
alfatag characters doesn't interest me.
Has someone tried both side by side?
I ask this because I have read conflicting opinions.
Some say that are not differences and others
that 7030+ is very better.
Very thanks.

It's probably the same trick they use in the VR-500. If you trim off the thin plastic covering on the battery so that it exposes the metal casing at the location of the third terminal, you don't need the jumper. The outer metal casing is actually the negative terminal of the battery. Either way, it works exactly the same. The only downside of the jumper approach is that if you forget and install alkalines and plug in the charger, it might not be a good thing. Having a dedicated NiMH battery is safer...this is what I use in my VR-500. You can still use the modified battery in other equipment if you need to.

That is what digital signals sound like on an FM receiver (your
scanner). Here in Hudson NH, they use the same voice freq for these
occasional data transmissions to the mobile keyboard units (460.425).

Problem is TOO MANY LOVE TO TELL. I could care less about Gays. But I do not want it shoved down my throat. What goes on behind closed doors be it a man/woman, man/man, woman/woman, human/animal - whatever - SHOULD STAY there. WHY do they have to SHOUT IT to the world? WHO GIVES A SHIT? You want to suck dick, good, go for it, just quit advertising. As for love and commitment, hell, there is so little of that anymore it is pathetic. Look in the chat rooms, look at divorce records. Look at shows like Jerry Springer. This world (at least the US) is lacking seriously in that area.

^ > ^ 225.0000
^ > ^ 275.0000
^ > ^ 300.0000
^ > ^ 325.0000
^ > ^ 375.0000

So the bracketed frequencies all simultaneously received the same signal:

Scanner 1 [225]- 250 MHz
Scanner 2 250-[275] MHz
Scanner 3 [275]-[300] MHz
Scanner 4 [300]-[325] MHz
Scanner 5 [325]- 350 MHz
Scanner 6 350- 375 MHz
Scanner 7 [375]- 400 MHz

I'm guessing that the scanners were hit as follows:

Scanner 1 225 MHz
Scanner 3 275 MHz
Scanner 4 300 MHz
Scanner 5 325 MHz
Scanner 7 375 MHz

Each the first frequency in the set. It looks to me like something interfered internally with the scanners, but you said that the signal being received was data. So I don't know.

Frank

Yep you pretty much got it correct. Without question it was some type
of data. Also to elimite the possilblity of interference between
scanners I had turned all but one off and still got the interference on
that last scanner on 375.000. So I'm pretty sure it wasn't interference
between the multipul scanners. Plus I've run this same search, same
ranges, same antenna, same multicouplers, and same scanners and ever had
it happen before....just strange....

JOSH MARSHALL

Investigation? No, Bush should pick up the phone

Enough already. Enough excuse-making.

We know that two senior members of the Bush administration intentionally blew the cover of an undercover CIA officer whose job is combating weapons
of mass destruction (WMD) proliferation. And their motivation was pure politics.

The president should find out who they are, reprimand them or, preferably,
fire them. But instead of being outraged, he doesn't even seem to care.

In case you're not familiar with what I'm talking about, let me explain.

You know about Joe Wilson, the retired diplomat who traveled to Niger at the
request of the CIA last year to get to the bottom of those claims about uranium sales to Iraq. Wilson says the White House disregarded or ignored
his report debunking the allegations because it weakened their case that Saddam was rapidly rebuilding his nuclear weapons program.

After he went public with his charges in a New York Times op-ed article, the
White House did all it could discredit Wilson's mission by portraying him as
a small-time operator whose investigation amounted to little. That's no surprise, I guess. We're all adults in this town. And if Wilson was going to
hold the White House to account in public, he had to expect he'd get hit back.

But they didn't stop there. To get back at Wilson, they blew the cover of
his wife, Valerie Plame, a covert CIA operative specializing in tracking other countries' efforts to acquire WMD.

How do we know this? Because two weeks ago syndicated columnist Robert Novak
fingered Wilson's wife as an "Agency operative on weapons of mass

destruction" on the say-so of "two senior administration officials." They
told him Plame had suggested Wilson for the job.

Now, as it happens, it's not even clear that this charge - that Wilson's
wife got him the gig in Niger - is true. The more relevant point, however,
is that two senior administration officials publicized her identity which
they almost certainly knew only because of their access to government
secrets.

Consider what that means.

CIA agents work under different sorts of "cover." There's "official
cover" -
like when an agent is assigned to a U.S. embassy under the guise that
he or
she is a foreign service officer. Then there's "nonofficial" cover -
like
when your business cards say you're a manager at Acme Overseas Energy
Corporation, but you really work for the CIA.

Plame is in that latter category.

By telling the world who she really works for, those senior
administration
officials not only jeopardized her career, they also compromised
whatever
operations she may have worked on, whatever networks she may have
developed
or relationships she may have cultivated. According to one highly-
respected
retired CIA officer who I spoke to Monday, revealing the identity of
a "NOC"
like Plame could literally put the lives of those who cooperated with
her at
risk. To reveal her identity, he told me, was "grossly irresponsible."

Some of the White House's spinners have been putting out the word that
Plame
may not that been that covert an agent after all. So maybe broadcasting
her
identity wasn't such a big deal. This isn't that easy an argument to
refute
since, precisely because Plame is a covert agent, it's difficult to
find out
just what she does or precisely what her status is.

My sources tell me that Plame formerly worked abroad under nonofficial
cover
and has more recently worked stateside. Her position today may be less

sensitive than it was when she worked abroad. But she still works on WMD proliferation issues. And, at a minimum, any operation that she may once have been involved in is probably now fatally compromised, any company which
provided her cover is now exposed.

However that may be, though, just how deep undercover does a CIA operative
have to be before blowing her cover becomes a problem?

So far, the White House's reaction has been awfully weaselly. When pressed,
Scott McClellan told reporters: "I'm saying no one was certainly given any
authority to do anything of that nature, and I've seen no evidence to suggest there's any truth to it."

Frankly, I think Novak's column gives us plenty of evidence. But who cares
whether Andy Card signed off on it or not. It never should have happened at
all - not least of which because it probably violated federal law. No one at
the White House should think it's okay to use the privileged information vouchsafed to them for national security reasons to settle political scores.
And, after all, I thought WMD proliferation was something were concerned about.

To date, Sens. Dick Durbin (D-Ill.) and Charles Schumer (D-N.Y.) have called
for investigations and any number of other senators have told reporters that
some sort of inquiry is probably in order. But let's be honest. We don't really need any investigations, with all their depositions and fancy lawyers
and public grandstanding. If the president wanted to, he could wrap this up
with a few quick phone calls. So why doesn't he?

A few years back, this town sped into paroxysms over claims that the Clinton
White House had used FBI files to smear its critics. Even according to Ken
Starr, those charges turned out to be baseless. This outrage, on the other
hand, actually happened. And, when you think about it, that sort of makes it
worse.

I have a 90 foot vertical for 160 meters.

Yes, I have tried it on 60 meters. It seems to be
about equal to an inverted vee at 60 feet at long
distances. For short skip, as expected, the inverted
vee wins. It is over a VERY extensive ground screen.

A 90 foot vertical is the same as a 90 foot
dipole, except it is in a different orientation
and is fed at the end instead of in the middle.
Since the FCC rules do not address these distinctions,
AFAIK this is a regulation dipole into which
you can transmit 50 watts.

You are mixing apples and oranges a little bit as the ï¿½more memoriesï¿½
and ï¿½Alfa tagï¿½ is the result of the FPU7030 option.

Specifically the plus unit has added or improved:
IP2&IP3
Lower noise synthesizer
Improved antenna input transformer
Improved IF filters
Optical instead of mechanical encoder for the main tuning knob
Includes the FPU7030 option

If you were to do this I would also go for the NB7030 option. The auto
notch works real nice and the noise blanker sometimes helps.

I canï¿½t help you with a before and after as I bought the radio upgraded.

I am thinking down the road, Mark. If our nation's government can use false information as justification to invade a country, it can use false information as justification to invade ANY country. How can we ever know for sure our government is telling the truth when they make claims about threats in the future? For that matter, how can we know our government is telling the truth about the other things they say Saddam did (killing his own people, torture, and so on)? Sorry, I don't like what I see down THAT road.

MF,

For a while the was the concept of a registared "Domestic Partnership"
{A "Legal Arangement" between two persons.} That would provide
certain benefits and rights to the signatories. This had broader
public support then the concept of GAY Marriage that does not have
broad public support and generates hostility from many segments of
society.

> And if youre interested in denying medical insurance benifits and

> black people?

MF,

This may be your personal 'logic' (mind set) to lump "Black People"
(African-Americans) and "Gays" (Homosexuals) together but the same
general percentages of African-Americans view "Gay Marriage" as
objectionable as American Society as a whole. Hispanic-Americans and
Asian-Americans as groups also have simular percentages with respect
to "Gay Marriage".

The FCC does require that you be able to show your calculations or
measurements to confirm that it is equivalent to a dipole (i.e. no gain).

I have an AOR7030.....it isn't a bad unit, but after a few years, silly problems show up, such as.....switches that have debouncing problems, a cheap mechanical encoder that seems to have noise problems; this problem could have been cleaned up with an XOR function in the microcontroller. The performance of both of the units is pretty similar, otherwise, unless you are in a very strong signal area. AOR addressed the IP problem by switching to shielded leaded inductors in the front end filters, so IP3 in the transition region is slightly improved. The reason for the improvement is because the original inductors' cores saturated at high signal levels. This change didn't really make any real difference in the midband regions of the filters. I am not sure why they didn't go to bandpass filters the way the other manufacturers chose to do. AOR chose to remove the shielding from the synthesizer, so one of the prominent users (Dave Zantos) observed a problem with "white noise" superimposed on the received signal with the "Plus" model.
On a final note, you can't go wrong with either one. When I phoned one of the distributers, and asked them the differences between the two models, the person I spoke to merely parroted AOR's advertised specifications. In other words, they really didn't provide a satisfactory answer. If it were a choice between the two units, I would probably go for the "Plus" model, because it does use the optical encoder for the main tuning; still, they still use those cheap, failure-prone mechanical encoders for the other functions. It may sound like I have a very negative view of this receiver, but I really don't. I just think that for the price, it should be more reliable. There are two reasons that I am still keeping mine.....first of all, it was a Christmas gift from my wife, and secondly, it is really a fun receiver, with all of those menu functions.

The little AWOL/Deserter/Dictator stops payment to tortured POWs. Says money should be given to his corporate cronies to help rebuild Iraq.

http://www.philly.com/mld/inquirer/news/nation/6422371.htm

Judge lets U.S. keep Iraqi money from ex-POWs
By Sam Hananel
Associated Press

WASHINGTON - Reluctantly siding with the Bush administration, a federal judge ruled yesterday that the government can prevent 17 Americans detained during the 1991 Gulf War from collecting $653 million in damages from frozen Iraqi assets.

The former POWs, who won the compensatory damages this month, contended they were entitled to some of the money from Iraqi assets in a special Treasury Department bank account. Justice Department lawyers countered that President Bush has the authority to determine how the money is spent. Bush wants the funds to help pay for rebuilding Iraq.

U.S. District Judge Richard W. Roberts made clear he was uncomfortable supporting the government. He said its position that the POWs cannot "recover any portion of their judgment as requested, despite their sacrifice in the service of their country, seems extreme."

The former POWs, including Cherry Hill's Jeffrey Zaun, were beaten and tortured by their Iraqi captors. They sued under a federal law that allows victims who win damages against foreign governments that sponsor terrorism to pursue blocked assets.

A law passed in April allows Bush to prevent litigants from tapping Iraqi funds. He invoked the law in this case shortly before the Iraq war began.

Treasury Department spokesman Taylor Griffin said the decision validated a tough judgment call to use a limited pool of funds to rebuild Iraq.

Stephen Fennell, a lawyer for the former POWs, called the ruling "incredibly disappointing." He said Congress could not have intended "that Iraq would be rebuilt on the backs of these victims." Fennell said he had asked a higher court to block the decision while he appeals.

In their lawsuit, the former POWs also won $306 million in punitive damages. Federal law does not allow them to try collecting that amount from Iraqi assets in the United States.

The jobless rate slid to 6.2 percent last month from 6.4 percent, the
Labor Department said.

The decline was caused by an exodus of people from the labor force,
not by any surge in hiring.

The government said 556,000 departed the labor force

Big drops in the labor force can occur as job seekers become
discouraged and abandon their searches.

Unless they are actively searching for a job, workers are not counted
as unemployed.

There were also signs of weakness elsewhere as the worker hours were
cut back to 33.6 hours per week in July from 33.7 hours in June.

Factory hours fell to 40.1 hours a week from 40.3 hours in the prior
month.

From Reuters, 8/1/03:
http://story.news.yahoo.com/news?
tmpl=story&cid=568&ncid=749&e=1&u=/nm/20030801/bs_nm/economy_jobs_dc

Jobless Rate Drops but Payrolls Slump

WASHINGTON (Reuters) -

The U.S. unemployment rate fell in July for the first time in more
than a year but in a report on Friday that ran counter to other signs
of an economic strengthening, employers chopped 44,000 workers from
their payrolls.

The jobless rate slid to 6.2 percent last month from 6.4 percent, the
Labor Department said.

The decline was caused by an exodus of people from the labor force,
not by any surge in hiring.

Indeed, July's payroll drop marked the sixth month in a row the
economy has lost jobs.

It contrasted with the expectations of private economists that
payrolls would grow by 18,000.

U.S. Shifts Rhetoric On Its Goals in Iraq

New Emphasis: Middle East Stability

By Dana Milbank and Mike Allen
Washington Post Staff Writers

Friday, August 1, 2003; Page A14

As the search for illegal weapons in Iraq continues without success, the Bush administration has moved to emphasize a different rationale for the war against Saddam Hussein: using Iraq as the "linchpin" to transform the Middle East and thereby reduce the terrorist threat to the United States.

President Bush, who has mostly stopped talking about Iraq's weapons, said at a news conference Wednesday that "the rise of a free and peaceful Iraq is critical to the stability of the Middle East, and a stable Middle East is critical to the security of the American people."

In the run up to this year's Iraq war, conferences and studies commissioned by hawkish conservative think tanks in Washington debated and prepared models for privatization of the Iraqi oil industry with, of course, major U.S. participation.

Neo-conservative pundits with equal faith and fervor argued that Iraqi oil revenues would finance the country's own reconstruction after the war and that they could even be used to offset some U.S. military operating costs, surely a cheap price to pay for liberating the Iraqi people from the terrible yoke of President Saddam Hussein?

But it hasn't worked out that way.

The cost of the war itself exceed previous public projections from the office of the Secretary of Defense.

At an April 16 news conference, Pentagon comptroller Dov Zakheim acknowledged that the cost of the war to that point came to $10 billion-$12 billion.

But the cost of returning troops to base would be another $5 billion-$7 billion, plus another $9 billion for the 3-1/2 weeks of combat operations, bringing the total cost at that point to between $24 billion-$28 billion.

Since then, the continued cost of occupying Iraq and of the continued pacification and counter-guerrilla operations mounted there has been widely estimated at around $1 billion a week.

Combining these two figures -- the Pentagon's own admitted costs of the war and the generally accepted cost of occupation operations, the costofwar.com Web site has estimated the cost of the war for the fiscal year after it took place at $76 billion.

Costofwar.com also notes interest rates on the $1-billion-a-week occupation costs will make them $1.5 billion a week, or $78 billion per year.

And even that figure may prove optimistic, as it assumes larger numbers of U.S. troops will not be required and the current levels of violence against U.S. forces will not escalate either.

The federal budget deficit for the coming year has been projected by the Bush administration's own Office for the Management of the Budget at $455 billion: the largest in history.

That means the Iraq war and its consequences alone will comprise 15.5 percent of the annual federal deficit at a time when it is larger, and rising faster, than ever before.

Far from being a windfall to the U.S. economy, the Iraq war has already proven itself to be a ball and chain around the economy's neck.

What happened to the vast oil production bonanza that was going to flow from Iraq?

It hasn't happened and quite possibly never will.

No one doubts the oil is there.

But what the war planners and energy strategists never factored into their considerations was that, far from welcoming the U.S. Army and Marines as their liberators, the Iraqis -- Sunni and Shiite alike -- might resent any continued U.S. military occupation and very quickly make it too hot to handle, which is exactly what has happened.

The Pentagon hawks and their favorite energy strategists also turned out to have no strategy for rebuilding Iraq or maintaining security in the oil fields and pipelines running from them.

First, they assumed an almost bloodless march to Baghdad instead of three weeks of high-speed and utterly successful, but still heavy, fighting. Collateral damage to oil facilities was considerably greater than anticipated.

Second, and far more important, the grand strategy, insofar as there was one, anticipated an orderly takeover of occupation duties by an undersized U.S. military force that could rapidly be half evacuated.

This plan ignored the warnings of Army Chief of Staff Gen. Eric Shinseki that hundreds of thousands of U.S. troops would be needed to ensure security in Iraq, including the security necessary to rebuild and operate the country's oil industry.

Deputy Defense Secretary Paul Wolfowitz even hung Shinseki out to dry publicly for making this estimate.

But since then he has had to swallow crow.

Wolfowitz and even his gung-ho boss, Defense Secretary Donald Rumsfeld, have been forced to acknowledge that at least 200,000 U.S. troops, or more than a quarter of the standing strength of the U.S. Army, will be needed to occupy Iraq for the foreseeable future. And that kind of presence costs money: currently $1 billion a week.

So far, no significant amounts of Iraqi oil have been produced for world markets since the war ended.

Therefore Iraqi oil exports, which were running at 2.6 million to 2.8 million barrels per day before the war began in March, have now further dropped.

The complete failure of two successive U.S. administrators in Baghdad to restore security, order and basic services to Iraq is a major reason why this has not happened.

The administration, indeed, has been unable to even recruit any significant number of volunteers from conservative think tanks or the federal government to volunteer to work in Iraq for the next year or two, so the occupation administration there remains seriously undermanned.

But there is a second reason that is in large part a consequence of the first -- U.S. planners never anticipated the rapid emergence of nationwide guerrilla war against the U.S. occupation, which is already costing up to one U.S. soldier killed per day.

And as part of this guerrilla war, sabotage operations against oil pipelines are already widespread.

Even with 150,000 U.S. troops in Iraq, they are spread far too thinly to aggressively fight the guerrilla war, lock down Iraq's borders with Iran and Syria and protect the oil facilities and pipelines at the same time.

Furthermore, the troops currently deployed are not trained in police tactics.

Pentagon officers speaking on condition of anonymity to United Press International have said at least twice the current manpower -- 300,000 U.S. or allied troops -- may be necessary to do this.

In the meantime, the supposed "macro-economic" benefit of "liberating" Iraqi oil for the world market not only has not happened, precisely the opposite has occurred.

Iraq is now in far-worse position to export either crude or refined oil to the world markets.

As a result, the continuing effect of the war has been to strengthen the market position of the three leading global producers, Saudi Arabia, Russia and Iran, while keeping global energy prices relatively high and thereby adding a further burden to the U.S. annual balance of trade deficit, already by far the largest of any country in world history.

And even if Iraqi oil finally starts to flow under optimum conditions, the total amount of revenue realistically projected from it would do no more than balance the already horrendous costs of the U.S. occupation.

John Cassidy made the relevant calculations in the July 14 issue of The New Yorker.

He wrote:

"Assuming that oil prices hover around twenty-five dollars a barrel, which is in the middle of OPEC's target range (twenty-two to twenty-eight dollars a barrel), a resurgent Iraqi oil industry producing six million barrels of oil a day for export would generate about fifty-five billion dollars a year in revenues."

But the cost to the United States of occupying Iraq is already running at between $52 billion to $78 billion a year on the U.S. government's own projections.

Analysis: Soaring costs of 'rescuing' Iraq

By Martin Sieff
UPI Senior News Analyst

WASHINGTON, July 31 (UPI) --

The liberation of Iraq was to have been the war that paid for itself in spades, and gave U.S. corporations the inside track on the greatest energy bonanza of the 21st century.

Instead, it has become a fiscal nightmare, a monetary Vietnam that already accounts for around 15 percent of the U.S. annual budget deficit, a figure likely to only grow remorselessly into the unforeseeable future.

The unforeseen cost of the war is already attracting powerful and influential critics, most worryingly to U.S. President George W. Bush, from within the GOP itself.

On July 26, Republican Sen. Richard Lugar of Indiana, chairman of the Senate Foreign Relations Committee, told National Public Radio that rebuilding Iraq is certain to cost U.S. taxpayers tens of billions of dollars over the next few years.

He estimated the rebuilding costs alone at $30 billion.

"But they do not wish to discuss that," he said.

Pentagon goes to Congress as war costs mount

By Peter Spiegel, Defence Correspondent, in London

When Lawrence Lindsey, then the White House's chief economic adviser, said in a published interview almost a year ago that he believed that the war in Iraq could cost anywhere from $100bn to $200bn, he was quickly admonished by his colleagues in the Bush administration.

Mitch Daniels, then the budget director, just two days later called Mr Lindsey's estimate "likely very, very high", and subsequently said the war would probably cost between $50bn and $60bn.

Just two months after Mr Lindsey made his remarks he was out of a job, with White House officials speculating that his war estimate was a big reason why he had been replaced.

As the 2003 fiscal year approaches its end, however, Mr Lindsey's prediction is looking more and more prescient.

After securing a $79bn appropriation in April to fund both the military and reconstruction efforts in Iraq for this year, the Pentagon acknowledged this week that it would have to come back to Congress again for another round of Iraq-related spending, although officials furiously refused to estimate how much they might need.

But people who have been briefed on the Pentagon's budgeting process said that the Defense Department is burning through its funds so quickly - $3.9bn per month - that it will need a new supplemental appropriation as early as January. Indeed, in an interview with the Financial Times this week, Dov Zackheim, the Pentagon's comptroller, said the US military was expected to have spent $58bn of the $62bn it received in the April spending bill by the end of the year.

With such funds running short, experts who have studied Pentagon spending patterns believe that during the next round of budget requests the Bush administration could be asking for as much as they did just four months ago.

60. Hey, Georgie, where's Osama, and where are the jobs?

From The Berkshire Eagle, 8/1/03:
http://www.berkshireeagle.com/Stories/0,1413,101%7E6267%7E1545833,00.html

Where's Osama, where are the jobs?

President Bush, dragged out to the Rose Garden by his handlers for one of his rare news conferences Wednesday, dodged and weaved, rambled and obfuscated before a press contingent that was not quite as deferential as usual.

One of the few times he showed enthusiasm for the task at hand was when he declared "Just watch" in response to a question as to how he planned to spend $170 million on a primary campaign when he had no opponent.

If the president's enthusiasm for governing equaled his enthusiasm for fund-raising, the country might be in better shape today.

Unfortunately, that is not the case, and the president's failures, domestic and foreign, were cast in sharp relief Wednesday, which is one reason he rarely takes questions from the press.

Concerning the economy, the president described the current recession as "shallow," which may be true if you are not among the growing legion of unemployed, and while he said there were "hopeful signs" about the economy he didn't offer any examples of them.

Signs aside, here are some facts.

Since Mr. Bush took over from President Clinton, the nation's unemployment rate has risen from 4.1 percent to 6.4 percent and a budget surplus has been replaced by the largest budget deficit in the nation's history.

There are no signs to indicate the economic situation will improve soon.

On foreign affairs, the president returned often to the hunt for Saddam Hussein, whose capture or killing is of dubious relevance outside of its public relations value to the White House.

Of greater relevance are the questions of when will American troops, reduced to sitting duck status in Iraq, be joined by foreign forces and how can a nation so deeply in debt continue to bear the cost of its military occupation of Iraq?

Hemming and hawing passed for answers to these questions.

While we heard plenty about Saddam Hussein Wednesday we did not hear much about Osama bin Laden who, after all, is the man who ordered airplanes to be flown into the World Trade Center, not Mr. Hussein, who is or was a threat exclusively to Iraqis.

It is apparent that the administration has no clue as to the whereabouts of Mr. bin Laden and no idea how to predict or prevent al-Qaida's next attack, which is the reason the White House builds up Mr. Hussein as a bogeyman for Mr. bin Laden and substitutes the squashing of Iraq for the unsuccessful destruction of al-Qaida.

Now, with the trying business of talking to journalists, and by extension Americans, behind him for at least several more months, President Bush can return to what he does best and enjoys most -- raising funds from fat cats.

Just watch.

Green Bay workers gather to protest tax cuts

Demonstrators gather near Conger Industries to protest President Bush's economic policy.

They say the cuts aren't going to create new jobs
By Jessica La Plante
News-Chronicle
A bouquet of signs and chorus of protests greeted a busload of Cabinet officials who pulled into the parking lot of Conger Industries on Tuesday to promote the president's new 2003 Jobs and Growth Act.

A group of several dozen workers, union officials and students picketed in a parking lot near Conger to protest growth in the nation's unemployment rate.

Unlike most labor-related pickets, the messages displayed across the sea of brightly colored signs weren't directed at the usual corporate CEOs or vice presidents. The management decisions these picketers were protesting were none other than the fiscal policies of the United States government.

The list of policymakers on board included Treasury Secretary John Snow, Commerce Secretary Don Evans and Labor Secretary Elaine L. Chao. The trio stopped at the Green Bay company as part of a two-day public-relations campaign through the Midwest.

During the campaign, the officials are explaining how the president's new plan uses tax cuts as a tool for economic growth. The goal of the Jobs and Growth Act is to create 1.4 million new jobs by the end of 2004 by giving American business owners and families tax breaks that can be reinvested into the U.S. economy. The plan includes tax deductions of up to $100,000 for companies that purchase new equipment.

However, many local workers are skeptical the tax cuts will spark an economic renaissance and cure Green Bay's 4.6 percent unemployment rate.

Larry Marx, co-director of Wisconsin Citizen Action - the group that organized the Tuesday picket - said the WCA has planned its own statewide tour to educate the public about Bush's policy. The busload of activists will follow the secretaries on their tour to remind the officials of the economic hardships working families have suffered.

Standing in a parking lot near Cormier Road, a group of local activists, including 13 Green Bay residents, waited to board a bus sporting the sign, "Read Bush's Lips ... No New Jobs."

David Newman, WCA staff director, said the traveling protesters represent a cross section of Wisconsin residents who attribute their loss of work and financial security to the Bush administration's economic plan.

"They're college graduates who can't find a decent job to farmers who are taking second jobs just to make ends meet," Newman said. "We (also) have a number of struggling single parents who do not qualify for the child tax credit and are pretty upset."

Mary Goulding, president of the Greater Green Bay Labor Council, spoke out at the rally against Bush's legislation. She said the tax cuts won't make the financial burdens of working families any lighter.

"I would like to question a $400 rebate for a family who has one child ... how is that going to create a job?" Goulding said. "Look at how much CEOs or presidents get (under) these tax cuts; what kind of jobs have they created?"

Goulding said she feels workers' rights have taken a back seat under Bush's leadership. She said the bus tour is proof of that.

"I'm a public employee, and when we try to go and organize, they say the union is bad," Goudling said. "With the budget cuts that are affecting all of Wisconsin and the other 49 states, they're putting pressures on unions like they did in the 1930s ... It's going backwards and we need to go forward in this country."

Richard Salmon, a retired disabled worker from Bellevue, said he came to the rally because he fears for his family's job security.

"My son-in-law works at (a manufacturing) plant here and they're threatening the workers there with moving their plant to Brazil," Salmon said. "These are good union-paid jobs ... you can't find those jobs anymore and that's the reason I'm here."

Salmon said he fears any new jobs created by the tax cuts will be located in foreign countries, where workers demand cheaper wages.

More than calling Bush's new plan ineffective, some Green Bay leaders said they felt the tax cuts would actually harm the U.S. economy by contributing to the national debt.

"It's been three years and (Bush) has taken a huge surplus and turned it into the largest deficit in American history," said Rabbi Sidney Vineburg. "We have a president and administration that is cut off from what real people are going through and how it feels to have people lose their jobs.

"We've got to have someone in that office who's going to work for the betterment of the common people and not the corporate people."

The protesters weren't the only sight to greet the Cabinet tour on Tuesday. A small crowd of a half-dozen women and children gathered along Cormier Road, waving Bush-Cheney signs to greet the policy makers with a show of support.

Barbara Tuttle, the owner of a Green Bay advertising agency, said she believes the tax cuts will help get the nation's economy back on track after the 9-11 terrorist attack derailed consumer spending.

"I think we're going to see things move forward," Tuttle said.

^ > but you said that the signal being received was data.

GeorgeF:
^ Without question it was some type of data.

In my limited experience the only thing that fits this situation is jamming. I got to observe this being done by a very experienced jammer while my ship was off the coast of Vietnam. High power noise at regularly spaced intervals can jam an entire band.

A similar tactic is counter-jamming. I observed this same guy plug a teletype into a common circuit and transmit useless data at high power. When the North Vietnamese started jamming that frequency he transmitted the real data at low power on another circuit.

So my revised guess of what you heard is that it may have been part a large scale exercise in jamming tactics. Perhaps there was another unit involved that was suppose to practice counter-jamming at the same time. If all nearby frequencies were unusually quiet just before and just after the noise then I would expect that it was a scheduled exercise.

George,

I've been enjoying your posts on the groups and have visited your website quite a few times.

Sounds like you've run across a spread spectrum encrypted signal. I hear 'em here occasionally. I'm south of Washington DC near Quantico Marine Corps base, the CIA and a huge remote transmitter site used by the Pentagon. (It's also a 'numbers station' transmitter site, but they don't exist, do they?). As per typical CIA and Pentagon operations, they use any radio frequency they want to- the ham bands, shortwave broadcast bands, military bands and in between television channels a lot. I've been next to the remote Pentagon site with my OptoScout and my R-10 and had it come up anywhere between 200 and 500 MHz with two to ten channels spaced from five to forty MHz apart of what sounded like medium baudrate data or white noise or a strong dead carrier which lasted anywhere from a minute to ten minutes at a time and then went down.

Happy scanning!
RadioNerd

You made an initial claim. He asked you a valid question about that claim and you countered by ridiculing him which is typical of most of your
responses. Can you or can't you answer his question and provide sources for your claim that Palast is lying? Simple question. Can you answer it or
not? Thank you.

You are proposing that Boyd's race means he would stand up for
disenfranchised voters in Florida? A specious argument. And further,
you assert Boyd's "findings" include direct evidence that Palast is
lying? Where are your sources?

While being bored today I decided to put together a list of freqs and which I have for the Avon Park range located in Central Florida. Also to the information page Iï¿½ve put some maps with the various operation area within the Avon Park range.

For those who have to work during the day the Avon Park range would be a good target for you. Avon Park hosts many night time training missions as well as day time.

Iï¿½ve also included a list of frequencies and indicated the most active freqs for the range. For those who like to store freqs in spreadsheet or database programs Iï¿½ve included the frequency list in CSV format. This can be viewed at http://www.MilAirComms.com

I post the URL so that people can go back to the website at a later date
if they bookmark it. It makes it easier to go to a book mark than to
try to search USENET's for information months later.

Also many people don't appricate it when others copy information word
for word form a website and post it to a USENET. But then again I've
been finding my typos in some strange places such as Monitoring Times
magazine.....

What a rhetorical jerk you are, Mister Pineapple. Typical of many on
the I-know-best-for-you right, your ability to bluster with words is
more important than any underlying facts. You set up your own straw
dogs and then focus the attention there, rather than on anything I
actually said or quoted. I did not cook anything and never said I
did. I was correcting my own typo. And how could I "refuse" to cite
sources when they were not requested. It was you I asked for a
reference . . .

And as for my references, I assumed, based on your own noise, that you
were the Google-mister. Here is my reference:

http://www.progressive.org/Media%20Project%202/mpbj1102.html

Here's another exact quote from the article:

"The purging of eligible voters seems to be where most of the fraud
took place in Florida. For example, in an in-depth study by the Palm
Beach Post, at least 1,100 eligible voters, incorrectly listed as
felons, were prevented from casting their ballot. However, 1,100 votes
seems trivial compared to findings of a recently released book."

What about your reference, where Ralph E. Boyd "proves" that Greg
Palast lied?

You can't just cut and paste from someone elses website and post that on the USENET without the possiblity of getting into some legal problems.

Just think of the crap you would get from Monitoring Times if you went to their website, copied entire NASA frequency list and pasted it to the USENET, you would give Bob Grove a heartattack.

I bring this up because about a year ago this was a very "hot" topic on the MilCom email list......

This, of course, is the Pineapple King arguing with his own fantasies.
I am, indeed, deeply concerned for Pineapple's mental well-being. If
his delusions come from an external source, such as reading Ann
Coulter, then there is hope. If, however, and this is my real
concern, he is able to find "admissions" and "fears" in my writing,
then there is twisted torment in that poor soul, and he may be beyond
help.

My detailed reply is posted following his earlier playtime, where he
posed a personal attack of his fantasy of me, rather than the
substance of what I said.

My 780's both illuminate orange. I have seen the in green.
Can I toggle between green and orange?

Rumor has it that new ones shipped from the factory are going to be green (BC780, BC785, and BC250). If you bought a used one it more than likely will be orange. Also if you puchased one which has been sitting on a warehouse shelf for a few months it to probably will be orange.

Rumor has it that Uniden is switching over to Green because green displays require less current which translates into less internal heating.

About 2 months ago I bought 2 BC 785's and they both are orange, a few weeks ago I bought a BC 250, it too is orange. I have 7 of the BC 780's, again all orange.... Personally I like the orange displays better. I have some Radio Shack scanners which have green displays, I find the Uniden orange easier to see.

Actually it makes it two steps. Why not post the information AND the link at
the end.

Hello,

I am thinking of getting a hand held trunk scanner that I can connect to my PC to program. I don't think I need digital, because I dont think it's used in my area. But I know trunk systems are used in one large city I'd like to listen to.

Looking for something in the $150-$250 range, new or used.

Can anyone suggest models or brands I should look for?

Thanks,

Tommy

The British Intelligence report is an irrelevant strawman argument designed to distract people from the real issue. Our government claimed there were actual weapons of mass destruction in Iraq which posed an immediate threat to this country - a threat so severe this country had to go to war against Iraq. Attempted material purchases ten or twenty years ago didn't pose that immediate threat. Weapons programs didn't pose that immediate threat. Weapons that supposedly existed ten to twenty years ago didn't pose that immediate threat. Only actual real weapons existing in the months leading up to that war, with an intent to use them, posed a credible threat. Our president repeatedly said those weapons, and that intent, existed. I've seen nothing to suggest Iraq intended to use WMD against the United States, no such weapons were actually used as we invaded that country, and no such weapons have been found in Iraq since the invasion. At this point, it does appear our government lied to us and the world.

Library thwarts Patriot Act snooping

Boulder patrons' records purged

By Marcos Mocine-McQueen, Denver Post Staff Writer

BOULDER -

Librarians across the country have raised their voices in objection to the USA Patriot Act - and those in Boulder may have found an end-run around the law.

The law allows federal investigators to gain access to records from businesses, including libraries, while conducting investigations.

If a federal agent asks a Boulder librarian for a list of all the books checked out by John Q. Public in the last month, the answer will be "Records? What records?"

"People have a right to read what they want to read without other people looking over their shoulder," said Priscilla Hudson, manager of the Boulder Public Library's main branch.

The library has decided to almost completely stop recording what books patrons have checked out.

The library will keep tabs only while a book is checked out; when the book is returned, that record will be purged from the library's computers.

While officials for other library systems in Colorado say they examined the law, and do purge their records, Boulder's decision to delete records solely to keep them out of investigators' hands is unusual.

The library backs up all of its checkout data in case the main computer system should fail.

Before the decision was made to delete the information after books are returned, all files would be kept for weeks or even months.

Under the Patriot Act, libraries would have to make those records available to federal agents.

That possibility, Hudson said, troubled librarians and forced them to examine record keeping.

They found it could be tightened.

"We really don't want this information," Hudson said.

"It's of no use to us. We really could clean this up faster."

So now, the records are deleted several days each week.

Deleting those files has become a regularly scheduled duty, instead of an afterthought.

"I don't think it concerns anybody what books I check out," said Maria Taylor as she left the Boulder Public Library with books in arm.

"I appreciate what the library is doing."

The federal law has prompted libraries across the country to examine their record-keeping habits.

"It's something we're all talking about," Hudson said.

"We're looking at every record we keep and asking, 'What's the purpose of this? Do we need it?"'

The Denver Public Library has not changed its procedures but is looking at what steps, if any, it should take to protect patrons' privacy and still comply with the law.

In Santa Cruz, Calif., librarians were troubled not only by the obligation to turn over information but by the fact that the law prohibits librarians from telling patrons that their records have been turned over.

The library has posted signs at checkout desks that read:

"Although the Santa Cruz Library makes every effort to protect your privacy, under the federal USA Patriot Act, records of the books and other materials you borrow from this library may be obtained by federal agents. That federal law prohibits library workers from informing you if federal agents have obtained records about you. Questions about policy should be directed to: Attorney General John Ashcroft ..."

The Santa Cruz Public Library now shreds its records each day.

So do libraries in Berkeley, Calif., and Arlington Heights, Ill.

Agents wishing to get library records under the act go to the secretive court that administers the Federal Intelligence Surveillance Act.

But they can't get records that don't exist, as library officials point out.

"There are a lot of areas of the Patriot Act that no one's doing anything about," said Carl Rose, a Boulder Public Library patron.

"I think what the library is doing is one of the greatest things anyone's done in a long time."

In 2000, before the Patriot Act, the North Metro Drug Task Force sought records from the Tattered Cover bookstore to see what books a man accused of manufacturing methamphetamine had purchased.

The Tattered Cover took the case to the Colorado Supreme Court to battle a judge's order that it turn over the records, and was successful.

The Patriot Act may provide a little extra motivation for those who don't return their library books on time.

The Boulder Public Library will continue to keep records of late fees.

The records are needed in case disputes arise about whether or not such fees have been paid, Hudson said.

Bush Prefers Program to Weapons

By Pascal Riche
La Liberation

Friday 01 August 2003

Not finding an arsenal, the researchers now want to prove that Saddam was trying to constitute one.

Washington correspondence

The order has been given to the whole Bush administration: from now on, one must no longer speak of "Saddam Hussein's weapons of mass destruction", but simply of his "program".

During his Wednesday press conference, President George Bush used the new expression three times.

This semantic shift is not innocent: it's easier to discover a program than an arsenal.

Yesterday, David Kay, the American inspector charged by the CIA with leading the search for Iraqi weapons, was heard in closed session by two Senate Committees (Armed Services and Intelligence).

He was accompanied by General Keith Dayton, Director of the Pentagon's Intelligence Services, who co-directs the searches.

The 1,500 researchers working under their command have not, up till now, found the least trace of forbidden weapons, in spite of the numerous interviews they've had with Iraqi scientists.

On the other hand, Kay has brought together kilometers of documents, which, according to the Bush administration, clearly bring the existence to light of an "active" weapons program.

During a press conference, David Kay took stock of the "important progress" that he was making every day, mentioning the discovery of new "sensitive sites", the existence of which had been hidden from UN inspectors, and of illuminating testimony from scientists "whose cooperation keeps growing."

The Democratic opposition was not fooled.

The semantic displacement of arsenal to program represents "a clear defeat for the White House", reckons Democratic Senator Jay Rockefeller (West Virginia).

According to him, this is still very far from the "imminent threat" put forward by the government at the beginning of the year.

For the moment, Americans are divided. In an NBC-Wall Street Journal poll, 48 % of respondents thought that Bush had given overall fair information about the reality of the Iraqi threat, against 47 % who felt he had obscured the case.

Analysis: Bush's Iraq war

By Nicholas M. Horrock
UPI Chief White House Correspondent

WASHINGTON, Aug. 1 (UPI) --

Up through May 1, the Iraq war for President George W. Bush was going nearly perfectly.

Certainly as he pointed out to reporters in the White House Rose Garden Wednesday, the sandstorms and delay in the first week the United States drove into Iraq had been troubling.

But when Saddam Hussein's giant statue tumbled in the center of Baghdad on April 9, both Bush and the world felt the United States had triumphed.

A little more than a month later, danger signs of chaos and difficulty were clear at the White House, yet the plan to fly out to the USS Abraham Lincoln was already laid on and Bush went ahead with it, landing on the deck wearing a flight suit and declaring the major fighting in Iraq over.

The world read that as the "war is won!"

But now, as Bush heads to his ranch in Crawford, Texas, the war against Iraq cannot be said to be over and nor really even won.

The Iraq war has changed context for Bush, moving from a foreign policy decision, to a domestic issue; from a foreign adventure to one of two main issues that could control his re-election.

The wounding and killing of American soldiers is a major part of this problem.

Since Bush declared the major fighting over on May 1, 108 U.S. soldiers have died in action or accidents.

The deaths are neither glamorous nor sensible.

A rocket-propelled grenade, a shot in the dark, a land mine triggered under a moving truck.

The U.S. command correctly points out that the bulk of the attacks have come in the Sunni Muslim "triangle" of cities and towns stretching north and west from Baghdad to Tikrit, Saddam's birthplace.

But there have been other attacks, northeast of Baghdad and, in earlier weeks, south into the Shiite areas.

The first direct lesson for Bush was one learned by Presidents Lyndon Johnson and Ronald Reagan: technological Western military power can defeat technological Western military power, but it remains vulnerable to an individual with a weapon.

Take Thursday's deaths in Baghdad.

One soldier died and three were wounded when the armored-personnel carrier they were riding in struck an explosive device on the road between Baghdad and its international airport, despite the fact this road has been the scene for dozens of previous attacks.

That was in mid-day.

At 11:45 that same evening, nearly a hundred miles away, an American soldier was killed and two wounded in an attack on a military outpost.

Four attackers, news accounts reported, were wounded and captured.

There are about 25 million Iraqis, some 40 percent are Sunnis or about 10 million people who might approve of that attack and a lot of others who don't care.

Beyond the deaths, being all the more worrisome and painful for Americans coming as a surprise is the nature of the U.S. troops.

In the aftermath of the Vietnam War, Johnson was criticized for not calling up the National Guard and relying upon the draft to supply troops.

He had foresworn the Guard because it was a major domestic political entity.

Bush has no freedom to make such a choice.

A large part of the U.S. military's operations are now carried out by reserve units and Guard outfits.

In order to smooth out the occupation of Iraq over what he has now convinced could be as long as a year, the administration has notified 20,000 National Guardsman they may be called up.

A goodly number of the combat deaths in recent weeks have been of reservists serving in Iraq on short-term assignments.

From the day that Baghdad was entered by the U.S. Marines last April, it has become increasingly clear the United States had no adequate plans for the post war.

The first American assigned there to direct, Jay Garner, was replaced by L. Paul Bremer, a 60-year-old former ambassador, who faultlessly wears a business suit in the heat of Baghdad.

He came to Washington late last month to brief Bush on his plans.

The goals -- free elections, choosing a new government and U.S. withdrawal -- remained the targets, but the timetable has slipped if there ever was one.

Bremer said this week that elections might be held in the fall of 2004.

But other things must come first: water, telephone service, full electrical power, jobs and transportation.

Along with delays and dangers, the U.S. forces have been unable to find evidence of a weapons of mass destruction program with anything like the scope and immediacy that Bush sketched in the weeks before the war.

The United States began, as soon as the first troops went into the country, sending along biological, chemical and nuclear weapons units to search for the equipment.

They came up dry.

Delta Force units were also sent out and found nothing.

Bush has remained sort of cheerfully confident, meeting this week with David Kay, a former U.N. weapons inspector who then went to Capitol Hill and gave an encouraging report to Congress.

But there are holes in this donut: the British said Saddam could launch a chemical attack in 45 minutes and it issued a report about African uranium which ended up in Bush's State of the Union Address.

Not only are American congressional committees looking into the derivation of these reports, but a British commission studying the death of a man accused of leaking government information may get into it.

When Bush finishes his August vacation, he will have 14 months to re-election.

Analysis: Soaring costs of 'rescuing' Iraq

By Martin Sieff
UPI Senior News Analyst

WASHINGTON --

The liberation of Iraq was to have been the war that paid for itself in spades, and gave U.S. corporations the inside track on the greatest energy bonanza of the 21st century.

Instead, it has become a fiscal nightmare, a monetary Vietnam that already accounts for around 15 percent of the U.S. annual budget deficit, a figure likely to only grow remorselessly into the unforeseeable future.

The unforeseen cost of the war is already attracting powerful and influential critics, most worryingly to U.S. President George W. Bush, from within the GOP itself.

On July 26, Republican Sen. Richard Lugar of Indiana, chairman of the Senate Foreign Relations Committee, told National Public Radio that rebuilding Iraq is certain to cost U.S. taxpayers tens of billions of dollars over the next few years.

He estimated the rebuilding costs alone at $30 billion.

"But they do not wish to discuss that," he said.

7/28/03

By Josh Marshall

The trio of quotations listed below called attention to the growing popularity of what conservatives are now calling the "flypaper" theory of our presence in Iraq.

The thinking goes something like this.

These guerilla engagements we're seeing in Iraq may not be such a bad thing.

What we're doing is attracting all the terrorists to Iraq (i.e., like "flypaper") so that

a) they won't be attacking us in America and

b) we can fight them there on our own terms.

As Andrew Sullivan put it early this month, "Continued conflict in Iraq, in other words, needn't always be bad news.It may be a sign that we are drawing the terrorists out of the woodwork and tackling them in the open."

Now I can imagine a number of problems with this approach -- moral, tactical and strategic.

But isn't the main fallacy that there isn't some finite number of "terrorists" out there whom we can draw to one place, kill or arrest, and then be done with it?

I mean, let's be honest:

Is there really any shortage of these dudes?

Are they gonna run out?

Do you remember Afghanistan?

Not this 'Afghanistan', but the last 'Afghanistan.'

The US-Pakistan-backed jihad against the Soviets made Afghanistan into a sort of jihad Club-Med where young Saudis could go for a few weeks or months of firing guns and fighting for God.

(Of course, some stayed on rather longer.)

The idea is supposed to be to drain the swamp, not create a new swamp and spend all your time swatting all the mosquitoes that come to hang out and breed.

As a reader (Tom R.) wrote last night in an email to TPM, the "flypaper" theory makes about as much sense as a public health director saying "By creating a dirty hospital, we're going to create a place where we can fight the germs on our terms."

But doing it as the Bush administration now intends is something like going outside and giving a few good whacks to a hornets' nest because you want to get them out in the open and have it out with them once and for all.

"Practice to Deceive"
Joshua Micah Marshall
Washington Monthly
April 2003

Being based in Iraq helps us not only because of actual bases; but because the American presence there diverts terrorist attention away from elsewhere. By confronting them directly in Iraq, we get to engage them in a military setting that plays to our strengths rather than to theirs'. Continued conflict in Iraq, in other words, needn't always be bad news. It may be a sign that we are drawing the terrorists out of the woodwork and tackling them in the open.

"Bring Them On"
Andrew Sullivan
andrewsullivan.com
July 3rd, 2003

Separately, Gen. Ricardo S. Sanchez, commander of coalition ground forces, told CNN that "we still have a long way to go" before eliminating resistance.

Iraq had become "a terrorist magnet," drawing some anti-American extremists from abroad to "a target of opportunity."

"But this," General Sanchez added, "is exactly where we want to fight them."

106. Did Bush poodle Blair's defense ministry try to burn evidence? Cover-up?

Newsgroup: rec.radio.scanner
Date: 2003-08-03 11:46:18 UTC
From: Crazy Taxi <Jersey@burger.flipper>

From The BBC, 8/2/03:
http://news.bbc.co.uk/2/hi/uk_news/politics/3118625.stm

MoD denies trying to burn Kelly plan

The Ministry of Defence has denied newspaper suggestions that it sought to destroy a document relating to Dr David Kelly.

According to the Daily Telegraph, officials were preparing to incinerate a "media plan" about the government weapons expert when they were stopped by security guards.

It is alleged that three days after Dr Kelly was found dead, the document was placed in a sack of material due to be burnt.

The guards became aware of this and alerted the police.

On Saturday, MoD sources conceded to the BBC there had been a "security breach" on 20 July when a bag of confidential material due for incineration was left out overnight.

However the sources said they were not aware that any of the material in the bag, which was taken away by Thames Valley Police, related to Dr Kelly.

Blair evidence

The BBC's political correspondent Norman Smith said it seemed unavoidable that Lord Hutton, who is carrying out an inquiry into Dr Kelly's death, would want to know if the police still have the bag and if so whether it does contain any relevant material.

He said the allegation raises the spectre of a potential cover-up by government officials whose evidence is likely to form a key part of the inquiry.

Lord Hutton opened the inquiry on Friday, setting out its parameters and indicating that he would call the prime minister, Defence Secretary Geoff Hoon and BBC journalist Andrew Gilligan to give evidence.

Other witnesses would include Dr Kelly's widow, Janice, MoD officials, the BBC Chairman Gavyn Davies and the chair of the Foreign Affairs Select Committee, Donald Anderson.

The inquiry has been adjourned until 11 August, to avoid clashing with the scientist's funeral next Wednesday.

Dr Kelly was found dead in woods near his Oxfordshire home on 18 July, having apparently committed suicide by slitting his wrist.

Three days earlier, he had given evidence to the Foreign Affairs Select Committee after being named as the source for a BBC report that a government dossier on Iraq's weapons of mass destruction had been "sexed up".

http://www.gregpalast.com/detail.cfm?artid=253&row=0

by Greg Palast

Well, well, well. President George was in one hell of bind this week when it turned that that Saudi Arabia funded Al Qaeda, not Iraq.

Realizing we'd invaded the wrong country, Bush did the honorable thing: he's come out against gay marriages.

This caused some real confusion in my staff where a gay member of our investigations team announced he was changing his allegiance from Howard Dean to George Bush.

"Bush Saves Gays from Marriage! Bush Saves Gays!" he rushed around the office beaming.

"Gay people exempt from going to in-laws for Thanksgiving dinner! Gay-mericans exempt from PTA meetings and hiring divorce lawyers!"

But then I had to bring him down to earth.

('Had to' because, while Bush announced last month that our conquest of Iraq had made 'the world a safer place', our President mentioned THIS week there's now a 'real threat' of new Al Qaeda hijackings. So America is safer? As long as one stays indoors.)

But here's the real kick in the head.

Turns out that unlike the 18 minutes missing from the Nixon tape, the 28 pages missing from Congress' publicly released report on the September 11 attack has been found.

And it turns out to be a summary of Saudi Arabia's financing of terrorist fronts including the 'charities' supporting Al Qaeda.

And now, the New York Times tells us, the US Senate has been embarrassed into holding hearings on those Saudi charity fronts including one named WAMY.

Of course, this is ancient news to those who watched my report on WAMY and Saudi funding of terror -- broadcast on BBC's evening news on November 9, 2001.

(In the USA, that report earned me the title of 'conspiracy nut.' In America, a 'conspiracy nut' is defined as a journalist who reports the news two years before the New York Times.)

And here's the ugly little punchline to the story you WON'T read in the Times.

Why has the Bush Administration covered up for WAMY and the Saudi's other blood-soaked 'charity' operations?

For the answer, let me take you back to Midland, Texas, 1986.

A young old man, George W. Bush, seems to have trouble finding oil.

But he strikes it rich when his flailing drilling partnership is bought out by Harken Oil.

Despite the addition of the business acumen of Bush Jr., Harken faces collapse; but is pulled from the brink by a cash infusion from a Saudi, Sheik Bakhsh.

The money from Arabia has nothing to do, we must assume, with Dubya's daddy at the time holding the post of Vice-President of the Free World.

The Bakhsh booty continued a pattern of the young Bush being saved from his dire business decisions by a line of Sheik angels.

His first oil company, Arbusto, going bust-o, was aided by the American financial representative of the bin Ladin family.

And on BBC TV last month, I reported this: following the bombing of our embassies, the Clinton Administration sent two delegations to Saudi Arabia to tell their royal highnesses to stop giving money to the guys who are killing us.

But Mr. Bush, once in office, put the kibosh on unfriendly words to the Saudis.

Furthermore, in the summer of 2001, Mr. Bush disbanded the US intelligence unit tracking funding of Al Qaeda.

What is it our G-men were uncovering?

According to two separate sources speaking to BBC, the funders of Al Qaeda fronts include those who have previously funded Bush family business and political ventures.

Now that's a wee bit embarrassing.

Something you wouldn't want in a congressional report.

Something you may not want the FBI to dwell on.

(And you can unlock the womens and children: the BBC reports will NOT be broadcast on US television.)

And there's this: a document marked "Secret" and "199I" (meaning 'national security') which found its way out of the offices of the FBI in into the office of our BBC/Guardian newspaper team.

It indicates (and whistleblowers confirmed) that, prior to the September 11 attack, the Bush Administration held back agents of the FBI from tracking two members of the bin Laden family.

According to the buried FBI report, the bin Laden lads were operating in the USA for "a suspected terrorist organization", WAMY.

But we mustn't ask too many questions of the Bush Administration's blindfolding the FBI, nor, Heaven forbid, discomfit the Saudis over their contributions to Terror-R-Us.

After all, in BushWorld, Saudi Arabia and America have shared values: we want our boys to kill, not to kiss.

Bush 'Fit For Duty'

(CBS/AP)

President Bush had his annual medical checkup Saturday before getting a start on his month-long vacation at his Texas ranch.

The president spent about 3ï¿½ hours at the National Naval Medical Center for the physical exam, his third as president.

Afterwards, according to CBS News Correspondent Mark Knoller, doctors said the president is in "excellent health" and "fit for duty."

Courageous librarians, protecting America's libraries from the scourge of the Bush administration. I wonder though, if Bill Clinton was still president, would the librarians still have the balls to resist the administration if the same demands were made of them? Likely not! Just as those people who so vociferously demand equal rights for women were willing to look the other way when it came to Bill Boy's antics, the same must be construed about the latest inane gesture from the liberal world.

Liberal librarians, certainly not you say. But I say otherwise. Librarians have consistently endeavored to assure children the right to access pornography on library computers, it's a First Amendment issue you see. Problem is that these same librarians feel free to violate the First Amendment when it comes to religious matters, you see they need to enforce the non-existent separation of church and state, on a mini scale, mind you.

Porno is good, religion is bad. Great people.

http://www.registerguard.com/news/20020127/1a.citysurfing.0127.html

http://www.lifesite.net/interim/2002/feb/11novascotia.html

"After careful consideration of the material you donated, we have decided that they are specialized materials and therefore not suited to our collection. This material would be more appropriate for a church library, spiritual centre or other specialized collection."

You see, religion is a specialized collection, pornography is for all.

Porno is good, religion is bad. Librarians are assholes.

Janeane Garofalo, the comedian, not a librarian, vehemently condemned Bush bringing us into war with Iraq, this is laudable, I'm finally on a liberal's side, (not). My reverie broke when Jeanane went on to explain that though Clinton's involvement in Bosnia et al. was equally unjust, it wasn't "hip" to protest Bill. This is the liberal mindset.

http://www.newsmax.com/showinsidecover.shtml?a=2003/2/23/151110

Though I no longer support Bush, I feel that he has done too little too late concerning that issues on which he ran and perhaps too much to soon when it comes to policing the rest of the world using our men and women as targets, I am smart enough to see through the criticisms that many of his so called detractors level. They are democrats, liberals, or just debased scum in general (I know, I know, the last two terms are synonymous for debased scum, but I did it for emphasis).

So fuck the librarians and their pious desire to protect their dwindling patron's privacy, if Clinton has asked the same they would have wet their panties complying.

Dave, I've got two things to say:

1: If you are genuinely so stupid as to post your phone number in a
public, uncensored forum that's potentially viewed by millions, then
you deserve every prank phone call, every telemarketer and every
fucker that steals your identity and thrashes your credit rating. I
hope it doesn't happen, but if it does, it's certainly deserved...

2: Why the fuck are you crossposting this to alt.drugs.pot? OK, sure
maybe some older hioppes into ham radio might be interested, but do
you really think that you're going to get a lot of respons, aside from
people like myself pointing out what a FUCKING IDIOT you are?

I have the PRO 95, and from a newbie I find it to be a very good scanner. It's easy to use, easy enough that I can have my mom use it to listen in on the Police and the neighbors :)

I haven't had a trouble with it yet, and I've brought it with me to a lot of places and along on a lot of bike rides. Adding a discriminator output was easy too. Battery consumption seems fine, although I have nothing to compare it with. I am using NiMH batteries..

> about the same price. I would recommend the PRO95.

Have you tried both? I have heard Radio Shack's are worse then
Bearcats. But I've also heard that Uniden makes Radio Shack units, so
I don't know which is true. I've heard problmes with the Pro 9x
series having problems with the sound being clear. Is this true?

Basically, why do you recommend the Pro 95 over the BC245XLT? And
what is the difference, besides the RS has 1000 channels and the BC
has 300.

Thanks,

Tommy

I have both and the Pro95 far out preforms the bc245. The pro95 has alfa
tags, 1000 channels, wider freq range, aa batteries. The pro95 is not
made by Uniden it is made by GRE. As far as the sound goes I have never
heard or had a complaint about it.

- i'd have to concur about the pro-95... the only bad thing about
the unit is that you have to use Windows to program it, but
thanks to Don Starr's generosity, you can download his nice Win95
program... see: http://www.starrsoft.com/freeware/win95/

Thats not true at all. I had mine up and running in no time at all by reading the manual to program it. I find it sad that people can't learn how to use a radio anymore without a computer. I'm not saying that I don't use the computer too but at least I know how to program all my radios by hand. As a matter of fact I learn how to use all my radios before I try the software for them. It's really not that hard.

Sometimes. The rule of thumb, which is not necessarily infallible, it this:
keypad above speaker = made by Uniden
keypad below speaker = made by GRE.

Don't quote me on that.

Thats a very bad and very stupid rule of thumb. I have 4 radios here
that would prove that wrong. I know you said don't quote you but you
should smack whoever told you that.

- that's how i first programmed my p95, but without computer help,
i would find it hard to spend hours upon hours of manual programming
1,000 freqs in and replicating the same freq scan plan over several
scanners... using a conversion program, i can swap freq programming
from the p95 to a p92 and vr-120d and vr-500 and ic-r2...

- in this case, letting 'your fingers do the walking' would drive
one nutz!

Just curious... How did you figure out I am in Colorado?

I looked up my area and it looks at the moment they are not digital, but are requesting funds for a digital system. $400-$500 is WAY out of my budget for a scanner, basically just a toy for me. I'll have to wait until they are $200 or less.

Thanks,

Tommy

The line

NNTP-Posting-Host: 67.1.146.91

contains the IP address of your computer. That IP address belongs to Qwest Communications located in Denver. It was assigned to your computer when you dialed up and connected to their network. That IP address resolves to:

0-2pool146-91.nas10.colorado-springs1.co.us.da.qwest.net

So you probably, but not necessarily, are connecting from Colorado Springs.

Frank
P.S. Disregard the webcam comment.

Well yeah I know about this..

I just did not expect it in casual conversation.. Can spook people out doing that...

P.S. Not in Colorado Springs, but close. anyway, Colorado Springs is the large city i want to listen to thoguh. And I can use a analog trunk scanner now, but they want to upgrade to digital. So I dont know how long I'll be able to use it for. For that matter, if I go the digital scanner, I dont know how long it will take before they upgrade again!! hehe

Not too often to I get to catch Miliatry Comms on VHF-Lo FM. But today there was considerable communications on 46.7000 FM. See log for 1225 Hrs for more details.

The MilAirComms.com Log report for 8/4/2003
All times are Eastern Time, frequencies in MHz and
unless other wise noted modulation type is AM.

REACH 308T (C-21)
Time: 0745 landing Homestead AFB
Frequency: 372.2000 (HOMESTEAD Dispatch)

SHARK ##
Time: 1053 reference was made to AR638 (refueling area near Miami) however nothing was heard on the AR freqs for AR638; 292.2000 was refered to as BUTTON 8.
Frequency: 292.2000 (Avon Park Rng Ctrl); 139.8000 (a/a)

MAKO 11
Time: 1054
Frequency: 281.5000 (Miami Cntr)

COPTER 374
Time: 1225 calling Range Control. Various comms on this freq most of day.
Frequency: 46.7500 FM (Avon Park?)

GAMBLER 2
Time: 1227 "we're just a few mintues out"
Frequency: 324.8000 (JSTARS?)

unid
Time: 1227 "tanks dry"
Frequency: 148.1250 (NORAD)

GAMBLER ##
Time: 1231 acm
Frequency: 350.6750 (SEALORD 3X)

unid
Time: 1234
Frequency: 273.0000 (TOPCAT a/a)

unid
Time: 1241 encrypted
Frequency: 169.4500 (US Customs)

MAULER ##
Time: 1302 RTB Mayport
Frequency: 323.2000 (VS-32 MAULER a/a); 267.5000 (FACSFACJAX)

DIAMOND 12
Time: 1302 heading towards Rodman target; will be dropping MK-52's;
1402 picking up the RiverRun to RTB to NAS JAX
Frequency: 357.0000 (Pinecastle Rng Ctrl); 380.8000 (Pinecastle);
267.5000 (FACSFACJAX); 351.8000 (JAX App)

EAGLE 1
Time: 1354
Frequency: 346.2500 (JAX Cntr)

VIDAR 1;
Time: 1354
Frequency: 267.5000 (FACSFACJAX)

DRAGONSLAYER 613
Time: 1354 no joy so switched to 284.5000; again on joy and
switched to 120.9500
Frequency: 267.5000 (FACSFAXJAX); 284.5000 (FACSFACJAX); 120.9500
(FACSFACJAX)

REACH 308T (C-21 Tail#40079)
Time: 1426
Frequency: 311.0000 (MacDill CP)

MAKO
Time: 1438 MAKO called for AVON OPS on this freq. Previous
frequency lists have this labeled as Avon Tower. This always puzzled me
because the Avon Airport is an Uncontrolled field meaning there is no
tower..
Frequency: 126.1500 (Avon Ops)

MAKO ##
Time: 1439
Frequency: 269.3000 (Miami Cntr Melbourne sector); 285.7250 (Avon Park)

Also the number is real, the address is real, the gear is real. Some
people are leaving some weird messages, but I've given away a few radios
already. It is quite a drive up to my home.

Dave

Pappy,

I get a kick out of these high school dropouts who call Bush stupid.

Here's you: high school.
Here's Bush: Yale graduate (history), jet pilot (National Guard),
Governor (Texas), President (USA). Still married to the woman he met
and married in 1977. Gave up booze at age 40. Stuck with it. In
office, signed a law allowing Texans to obtain permits to carry
concealed weapons. Crime dropped drastically.

Message to 'Crazy Taxi': Have you done any of those things? No? Oh,
OK. But good for you, you learned how to post to the internet over and
over and over and over. And over.

Over and out, loser.

Start with this:
http://www.airnav.com/airports/
for airport info, approach, departure, ground, tower, etc.

THEN check out
http://www.milaircomms.com/artcc_frequencies.html
for the enroute stuff. GeorgeF did a great job on this - you'll like this page. Check out the rest of the site while you're there -
he's got some good stuff, esp for his part of the US.

>Great Radio Discussion.

Love of radio is the common interest that brings all of us here to this rec.radio newsgroup. Just because a group of individuals that enjoy radio get together doesn't mean that subjects other than radio can't be discussed here. You may not be interested in this particular conversation. That doesn't mean that you have the right to stick your nose into it and rudely proclaim your distaste for the conversation. You wouldn't do it in real life because the participants in the conversation would either tell you to GO FUCK YOURSELF or poke you in the nose. So don't do it here Skippy.

Money alone does not get you into Yale. You have to have a very good GPA and
score high on the SAT.

People like you usually drop out of Community College and find lucrative
work in the food dispensation industry.

After reading the following paragraph I would definitely say that
President Bush is fit for duty. We don't need to send Bush to Iraq.
He has Generals to take care of that for him. For you, I only have
one question: "would you like fries with that?"

>The London Sunday Telegraph recently reported that, soon after the
war began, >Uday was deeply depressed. According to the former
director of Iraqi >television quoted in the Telegraph, the last words
he heard Uday speak were >these: "This time I think the Americans are
serious. Bush is not like Clinton. >I think this is the end."

>
>More Bush propaganda.

what a revisionist lie. i guess those who cant do hate those who can.

1. she was not in command of the unit. it was not her fault about the wrong turn

2. she was in battle.

3. she knew that was a risk. she was in the army.

4. she didnt risk anyone's life. it's standard policy to retrieve wounded.

in fact, every word you've written, including 'and', and 'the' is a lie.

other than that it's a great post.

I have tried scan control using a BC785 and it is a terriffic program.
Seems to have very few flaws (I havent encountered any) and is very easy to
use.

^ Where can I buy a good telescoping handheld antenna for
^ my BC-3000XLT?

Antenna's aren't designed to support the weight of a radio. You should hold
the radio in your hand, not the antenna.

Frank

I think RS still sells a ~26" with a choke in the middle for $12 or so.
Grove also has a telescoping with a hinge, ANT06, 29", $15.

>From Reuters, 8/2/03:
http://www.nytimes.com/reuters/politics/politics-politics-economy.html

By REUTERS

WASHINGTON (Reuters) -

Democrats on Saturday said President Bush's economic policies have done little to create jobs and have forced many state and local governments to raise taxes and cut spending for education, public safety and health care.

Virginia Gov. Mark Warner said in the weekly Democratic radio address that while Bush and his Republican allies in Congress voice support for popular education and health care programs, they have not backed it up with federal financing.

``So while the president pats himself on the back for cutting taxes, the hard reality is that his political victory ends up simply passing the burden down to your state and local governments,'' Warner said.

Warner criticized Bush's economic policies saying the president is now on track for the worst job creation record since Herbert Hoover was president during the Great Depression.

Bush has been touting his policies; and members of his economic team, including Treasury Secretary John Snow, have been traveling around the country talking up the benefits of his tax cuts.

Warner said the economy has lost some 3.1 million jobs and that a $236 billion surplus inherited by Bush has been turning into a record $455 billion deficit.

He noted that leading sheet and towel maker Pillowtex Corp. shut all of its 16 plants just this week and terminated thousands of jobs, many in Virginia.

``The administration's tax cut policies offer little for these workers and millions of other men and women like them,'' Warner said.

Facing a Second Nuclear Age

By WILLIAM J. BROAD

This week, ten minutes by car south of Omaha, Neb., the United States Strategic Command is holding a little-advertised meeting at which the Bush administration is to solidify its plans for acquiring a new generation of nuclear arms.

Topping the wish list are weapons meant to penetrate deep into the earth to destroy enemy bunkers.

The Pentagon believes that more than 70 nations, big and small, now have some 1,400 underground command posts and sites for ballistic missiles and weapons of mass destruction.

Determined to fight fire with fire, the Defense Department wants bomb makers to develop a class of relatively small nuclear arms -- ranging from a fraction the size of the Hiroshima bomb to several times as large -- that could pierce rock and reinforced concrete and turn strongholds into radioactive dust.

Jobless Say Economic Recovery Is a Mirage

By ADAM GELLER
AP Business Writer

NEW YORK --

Six days before Christmas, Antonio Tirado called his wife with the news -- he'd just been laid off.

The next morning, Martha Tirado had to return the favor.

Me too, she said.

Seven months later, the couple -- she's an accountant, he worked for a commercial mover -- are certain they're just as unemployed as when it was cold outside.

So forgive the Tirados for doubting analysts who say the economy began to warm up well over a year ago.

"These experts, where do they get that information?" says Martha Tirado, who's been sending out about 40 resumes a week with no takers.

"They're probably going to places where people are working. They're probably not talking to little people like us."

The frustrations of the New York couple and other jobhunters were confirmed Friday when the government reported that, despite a dip in the unemployment rate, the economy shed more jobs in July and thousands of those without work got so discouraged they gave up searching.

That stretched to 20 months the lag between the official end of the recession and the recovery of the labor market, making this the longest such lag in memory.

It is longer even than the so-called "jobless recovery" of the early 1990s when it took 15 months after the overall economy started expanding before unemployment began to turn around.

"We've actually seen declines in employment levels that have lasted far longer than in the early 90s," said Josh Bivens, an economist with the Economic Policy Institute, a think tank with ties to organized

labor.

"You just didn't see the sustained job shedding that you've seen in this recession. Compared to the current recession, it was nowhere near as jobless."

Despite the lagging job market, a panel of academic economists at the National Bureau of Economic Research concluded recently that the recession ended in November 2001 -- more than a year and half ago.

Since then, unemployment -- which hit a low of 3.8 percent in early 2000 -- has risen substantially.

In March of 2001, when the recession began, it hit 4.2 percent.

By November of that year, when the economy hit bottom, it was at 5.6 percent.

In June of this year it rose to 6.4 percent, a nine-year high.

And despite the dip in July to 6.2 percent, many economists called the report weaker than expected and say the jobless rate could rise again later this year.

Employers cut their payrolls for the sixth month in a row in July, a sign that businesses remain cautious about the long-awaited turnaround.

The economy bled another 44,000 jobs in July, despite forecasts by analysts who expected positions would be added.

Meanwhile, 470,000 workers were so convinced of the lack of jobs, they didn't bother searching.

Those discouraged workers are not counted in the official unemployment figure.

Despite the job losses, analysts agree the economy continues to grow.

But they are divided in their assessments of the labor market and how much of a risk a sustained lack of jobs pose to the recovery.

"I think there is definitely that risk and my concern is that economic growth certainly can peter out," said Sung Won Sohn, an economist with Wells Fargo & Co. in Minneapolis.

"Consumers are the ones who spend money and they need jobs. You cannot continue on with economic growth without employment gains."

Sohn and others say some gains are the natural course of any economic cycle.

But this cycle is different because there is a fundamental restructuring going on, with employers shifting manufacturing jobs to China and software jobs to India, rather than hiring in the United States.

Disdain for Bush Simmers in Democratic Strongholds

By ROBIN TONER

DES MOINES --

While Democratic leaders in Washington debate strategy and demographics for the 2004 election -- the wisdom of campaigning from the left, right or center -- something far more visceral is at work in the first caucus state, and in other Democratic redoubts.

There is a powerful disdain for the Bush administration, stoked by the aftermath of the war in Iraq and the continuing lag in the economy.

Human Rights Watch released a report this past week saying that warlords, whom the U.S. military helped put in power so they could fight the Taliban and al Qaeda, are terrorizing much of the country.

Their gunmen are intimidating journalists and political opponents as well as robbing, detaining and raping ordinary Afghans with impunity, the report said.

At the same time, cooperation between the U.S. military and regional leaders has not always succeeded in thwarting the Taliban and al Qaeda -- notably in Kandahar.

Twice in recent months, large Taliban groups have attacked U.S. or allied forces, and Kandaharis are increasingly critical of the United States for not acting more aggressively to stop terrorism and protect the populace.

Recent efforts to flush out Taliban forces have brought some tangible results, but have failed to stop them from regrouping over the Pakistani border, beyond the reach of coalition forces.

In early June, Kandahar provincial soldiers killed about 40 people they identified as pro-Taliban fighters during a clash six miles north of Spin Boldak, near the Pakistani border.

Afghan Interior Minister Ali Ahmad Jalali later said many of the dead carried Pakistani identification cards or mobile phones.

On July 19, a large group of pro-Taliban fighters fired on a convoy of U.S. Special Forces and other coalition soldiers patrolling near Spin Boldak.

The coalition soldiers returned fire and called in AH-64 Apache helicopters, killing between 22 to 24 enemy fighters, the U.S. military said.

A Kandahar police official said the dead men were killed as they fled over the border into Pakistan.

Mohammad Anwar, an Afghan trader who grew up in Spin Boldak and now lives in the Pakistani town of Chaman, said he is perplexed that high-ranking Taliban officials live openly in his prosperous neighborhood.

In late June, he saw guns, money and motorbikes being dispensed at a local mosque, he said.

"Everybody knows there are terrorists there, but they don't take action," Anwar said.

"It scares me."

Gen. Mohammad Akram Khakrizwal, the Afghan central government's highest-ranking police official in Kandahar, said he too has watched with alarm as remnants of the Taliban grow more visible and active.

After coalition forces routed them, Taliban leaders fled and hid for six months, he said.

Then they started appearing openly in Pakistan.

"They wanted to know what the reaction would be," Akram said.

"After there was no reaction from the coalition or the government, they started regrouping."

Before long, he said, the Taliban and its allies began slipping into Afghanistan to disseminate anti-government, anti-coalition propaganda fliers, which Afghans call "night letters."

"Then they started burning schools and, again, no one said anything," he said.

"The third phase was explosions. . . . Now they are targeting mullahs and police officials."

To Akram, who fought the Soviet occupation of Afghanistan, the progression looks ominously familiar.

"It is dangerous," he said.

"During the Russian invasion, we did the same thing: step by step. These Taliban have been organizing step by step.

"Now that they have not been stopped and they are in larger numbers, they will make the situation worse for the coalition forces and the Afghan government."

Afghan Political Violence on the Rise

Instability in South Grows as Pro-Taliban Fighters Attack Allies of U.S.-Led Forces

By April Witt
Washington Post Staff Writer

Sunday, August 3, 2003; Page A01

KANDAHAR, Afghanistan --

There is an armed guard in the house of God.

At the front gate of the Abdurrad Akhunzada mosque, a turbaned watchman paces warily in the dusty twilight, hiding his Kalashnikov beneath an outsized scarf so he doesn't frighten men arriving for evening prayers.

A remote-controlled bomb exploded at the mosque last month, injuring the mullah and 24 worshippers as they knelt, hands outstretched in supplication.

Two days later, a mullah, who had hung the Afghan flag in his mosque and said good Muslims support the nation's central government, was shot to death as he sat praying, a book open in his hand.

A third Kandahar mullah was attacked this week, executed outside his mosque by gunmen on a motorcycle.

All three clerics served on a religious council that recently decreed that, contrary to pronouncements by the Taliban Islamic movement, there is no legitimate jihad, or holy war, against the central government or the foreign troops that support it.

A year and a half after the United States and its allies drove the Taliban from power, acts of politically motivated violence have become frequent and fierce in the key southern province of Kandahar, the birthplace of the Taliban and the source of countless shifts in Afghan politics and culture over the centuries.

Bands of 50 or more pro-Taliban fighters have begun appearing around Kandahar, both along the border with Pakistan and in the interior of the province.

Just over the border in the Pakistani town of Chaman, high-ranking Taliban officials are meeting openly and handing out guns, money and motorbikes, according to a witness and Afghan police officials.

Poor Afghans who don't share the Taliban's strict interpretation of Islam or its mission of jihad are nevertheless accepting Pakistani money to plant land mines and bombs in Afghanistan, they said.

In addition to Taliban fighters, other men with guns -- warlords -- dominate much of Kandahar, allowing the trade in illegal drugs to flourish.

Civic activists who once hoped to provide an alternative to both radical fundamentalists and marauding militiamen feel silenced and afraid.

"If someone rises up to say something about democracy or social equality, then tomorrow he won't exist anymore," said Mohammad Wali Hotek, head of one of the largest tribes in the Pashtun ethnic group, which is predominant in the south.

"As there is no rule of law in Afghanistan, the gunmen can do anything they want.

"We are tough people," said Hotek, who was praying at the Abdurrad Akhunzada mosque when the bomb exploded there last month.

"The experiences we are having now make us lose our hope for the future."

Kandahar police also say they feel demoralized and targeted.

In July alone, one district police chief was shot to death on his way home from work and another was killed along with five of his officers when a band of about 20 armed men stormed their compound, police officials said.

This past week, five or six government officials were ambushed and killed along the same isolated road where a Red Cross water engineer was executed in late March.

The mood in the province is so tense that when a major dust storm developed earlier last week, blotting out the sky with mustard-colored sand, some Kandaharis read it as a portent.

"It just feels like something is building," said Sarah Chayes, an American former journalist who now runs a pro-democracy group called Afghans for Civil Society.

"One year ago I didn't have any problem driving around Kandahar by myself. Now I feel it is a lot more dangerous."

Kandahar's mounting security problems have dire consequences for the province's poorest people.

In the four months since the execution of the Red Cross engineer, the number of nongovernmental organizations with foreign workers in Kandahar has dropped from 22 to just seven or eight, said Talatbek Masadykov, head of the Kandahar office of U.N. Assistance Mission in Afghanistan.

Those who have remained often stick close to the city of Kandahar rather than risk traveling to outlying districts. Crucial reconstruction and humanitarian aid, from bridge repairs to food distribution, have slowed or stopped as a result, he said.

The growing instability in Kandahar has ominous implications for the rest of Afghanistan.

As the heartland of the Pashtuns, whose monarchs ruled Afghanistan for much of the past three centuries, and the place where the Taliban began its rise to power in the early 1990s, Kandahar has long been the trendsetter for the rest of the country.

"Kandahar was the first capital of Afghanistan," said Masadykov.

"Historically, those who know Afghanistan say that if you can solve the political issues in Kandahar, you can solve the issues in the whole country. If you can't do it in Kandahar, it means that you are lost."

sure beats the last reply he got for this question.... Not sure about the Grove antenna (not familiar with it), but the Rad Shack - if the one I'm thinking of is the same one you're referring to, is sort of tunable as to frequency by extending or collapsing per a chart... It should work ok. JMS

Are you talking modding it for sell or resetting it? If you want to mod
it for cell then forget it, theres no such mod. If you want to reset it
then press 2 9 manual and power it up.

Hi guy's,
anybody know what this functions do on the Winradio model WR-3700e.
- FM6 (extra buttom on FMN ?)
- AGC
- FMM (extra buttom on FMW ?)

I looking also for secret and extra functions for this PC radio(not the normal plug ins)
thanks,
Ron Barell

>>false promises and exaggerated claims, religion.<<

(None of this had ever been a $ thing, or at least not when it began.)
Politicians use it for power, they will use anything they can find to get
their way. Speak of the devil, I'm almost there if I wanted
To run for anything. (But I don't want to end up on the dark side of this
thing.) The Wars of this thing are here, and you have to ask yourself,
What Side Do I Want To Be On.
Don't you think it's at least a little strange that everything that's
happening today is in the Bible? Written 1000s of Years Ago.
Everyone is starting to dumbly follow everything the UN Says to do. This
would be the beast the Bible says that
Everyone starts to follow.
And there's also the chip they want to put in our heads or in our right
hands. The speed of this chip is 6.66Mhz, but when a computer starts
working with it, or runs programs on it, the computer takes the (.) and
turns it to numbers kind of like this. 010001101010 and the number
Becomes 666
But I forgot, your a pure atheist, and none of this will make any sense to
you.

Dennis E Strausser Jr (Raichu!!), don't fear my electric : I won't use
it if I feel safe.

>> Democrats on Saturday said President Bush's economic policies have
>> done little to create jobs and have forced many state and local
>> governments to raise taxes and cut spending for education, public
>> safety and health care.
>>
>> Virginia Gov. Mark Warner said in the weekly Democratic radio address
>> that while Bush and his Republican allies in Congress voice support
>> for popular education and health care programs, they have not backed
>> it up with federal financing.
>>
>> ``So while the president pats himself on the back for cutting taxes,
>> the hard reality is that his political victory ends up simply passing
>> the burden down to your state and local governments,'' Warner said.
>>
>> Warner criticized Bush's economic policies saying the president is now
>> on track for the worst job creation record since Herbert Hoover was
>> president during the Great Depression.
>>
>> Bush has been touting his policies; and members of his economic team,
>> including Treasury Secretary John Snow, have been traveling around the
>> country talking up the benefits of his tax cuts.
>>
>> Warner said the economy has lost some 3.1 million jobs and that a $236
>> billion surplus inherited by Bush has been turning into a record $455
>> billion deficit.
>>
>> He noted that leading sheet and towel maker Pillowtex Corp. shut all

>> of its 16 plants just this week and terminated thousands of jobs, many
>> in Virginia.
>>
>> ``The administration's tax cut policies offer little for these workers
>> and millions of other men and women like them,'' Warner said.

>news:0eaed3d63f22a63074913ce3832262f4@remailer.frell.eu.org...
>> Human Rights Watch released a report this past week saying that
>> warlords, whom the U.S. military helped put in power so they could
>> fight the Taliban and al Qaeda, are terrorizing much of the country.
>>
>> Their gunmen are intimidating journalists and political opponents as
>> well as robbing, detaining and raping ordinary Afghans with impunity,
>> the report said.
>>
>> At the same time, cooperation between the U.S. military and regional
>> leaders has not always succeeded in thwarting the Taliban and al Qaeda
>> -- notably in Kandahar.
>>
>> Twice in recent months, large Taliban groups have attacked U.S. or
>> allied forces, and Kandaharis are increasingly critical of the United
>> States for not acting more aggressively to stop terrorism and protect
>> the populace.
>>
>> Recent efforts to flush out Taliban forces have brought some tangible
>> results, but have failed to stop them from regrouping over the
>> Pakistani border, beyond the reach of coalition forces.
>>
>> In early June, Kandahar provincial soldiers killed about 40 people
>> they identified as pro-Taliban fighters during a clash six miles north
>> of Spin Boldak, near the Pakistani border.
>>
>> Afghan Interior Minister Ali Ahmad Jalali later said many of the dead
>> carried Pakistani identification cards or mobile phones.
>>
>> On July 19, a large group of pro-Taliban fighters fired on a convoy of
>> U.S. Special Forces and other coalition soldiers patrolling near Spin
>> Boldak.
>>
>> The coalition soldiers returned fire and called in AH-64 Apache
>> helicopters, killing between 22 to 24 enemy fighters, the U.S.

>> military said.
>>
>> A Kandahar police official said the dead men were killed as they fled
>> over the border into Pakistan.
>>
>> Mohammad Anwar, an Afghan trader who grew up in Spin Boldak and now
>> lives in the Pakistani town of Chaman, said he is perplexed that
>> high-ranking Taliban officials live openly in his prosperous
>> neighborhood.
>>
>> In late June, he saw guns, money and motorbikes being dispensed at a
>> local mosque, he said.
>>
>> "Everybody knows there are terrorists there, but they don't take
>> action," Anwar said.
>>
>> "It scares me."
>>
>> Gen. Mohammad Akram Khakrizwal, the Afghan central government's
>> highest-ranking police official in Kandahar, said he too has watched
>> with alarm as remnants of the Taliban grow more visible and active.
>>
>> After coalition forces routed them, Taliban leaders fled and hid for
>> six months, he said.
>>
>> Then they started appearing openly in Pakistan.
>>
>> "They wanted to know what the reaction would be," Akram said.
>>
>> "After there was no reaction from the coalition or the government,
>> they started regrouping."
>>
>> Before long, he said, the Taliban and its allies began slipping into
>> Afghanistan to disseminate anti-government, anti-coalition propaganda
>> fliers, which Afghans call "night letters."
>>
>> "Then they started burning schools and, again, no one said anything,"
>> he said.
>>
>> "The third phase was explosions. . . . Now they are targeting mullahs
>> and police officials."
>>
>> To Akram, who fought the Soviet occupation of Afghanistan, the
>> progression looks ominously familiar.
>>
>> "It is dangerous," he said.
>>
>> "During the Russian invasion, we did the same thing: step by step.
>> These Taliban have been organizing step by step.
>>

>> "Now that they have not been stopped and they are in larger numbers,
>> they will make the situation worse for the coalition forces and the
>> Afghan government."
>>
>>
>> >From The Washington Post, 8/2/03:

>>
>> Afghan Political Violence on the Rise
>>
>> Instability in South Grows as Pro-Taliban Fighters Attack Allies of
>> U.S.-Led Forces
>>
>> By April Witt
>> Washington Post Staff Writer
>>
>> Sunday, August 3, 2003; Page A01
>>
>>
>> KANDAHAR, Afghanistan --
>>
>> There is an armed guard in the house of God.
>>
>> At the front gate of the Abdurrad Akhunzada mosque, a turbaned
>> watchman paces warily in the dusty twilight, hiding his Kalashnikov
>> beneath an outsized scarf so he doesn't frighten men arriving for
>> evening prayers.
>>
>> A remote-controlled bomb exploded at the mosque last month, injuring
>> the mullah and 24 worshippers as they knelt, hands outstretched in
>> supplication.
>>
>> Two days later, a mullah, who had hung the Afghan flag in his mosque
>> and said good Muslims support the nation's central government, was
>> shot to death as he sat praying, a book open in his hand.
>>
>> A third Kandahar mullah was attacked this week, executed outside his
>> mosque by gunmen on a motorcycle.
>>
>> All three clerics served on a religious council that recently decreed
>> that, contrary to pronouncements by the Taliban Islamic movement,
>> there is no legitimate jihad, or holy war, against the central
>> government or the foreign troops that support it.
>>
>> A year and a half after the United States and its allies drove the
>> Taliban from power, acts of politically motivated violence have become
>> frequent and fierce in the key southern province of Kandahar, the
>> birthplace of the Taliban and the source of countless shifts in Afghan
>> politics and culture over the centuries.
>>

>> Bands of 50 or more pro-Taliban fighters have begun appearing around
>> Kandahar, both along the border with Pakistan and in the interior of
>> the province.
>>
>> Just over the border in the Pakistani town of Chaman, high-ranking
>> Taliban officials are meeting openly and handing out guns, money and
>> motorbikes, according to a witness and Afghan police officials.
>>
>> Poor Afghans who don't share the Taliban's strict interpretation of
>> Islam or its mission of jihad are nevertheless accepting Pakistani
>> money to plant land mines and bombs in Afghanistan, they said.
>>
>> In addition to Taliban fighters, other men with guns -- warlords --
>> dominate much of Kandahar, allowing the trade in illegal drugs to
>> flourish.
>>
>> Civic activists who once hoped to provide an alternative to both
>> radical fundamentalists and marauding militiamen feel silenced and
>> afraid.
>>
>> "If someone rises up to say something about democracy or social
>> equality, then tomorrow he won't exist anymore," said Mohammad Wali
>> Hotek, head of one of the largest tribes in the Pashtun ethnic group,
>> which is predominant in the south.
>>
>> "As there is no rule of law in Afghanistan, the gunmen can do anything
>> they want.
>>
>> "We are tough people," said Hotek, who was praying at the Abdurrad
>> Akhunzada mosque when the bomb exploded there last month.
>>
>> "The experiences we are having now make us lose our hope for the
>> future."
>>
>> Kandahar police also say they feel demoralized and targeted.
>>
>> In July alone, one district police chief was shot to death on his way
>> home from work and another was killed along with five of his officers
>> when a band of about 20 armed men stormed their compound, police
>> officials said.
>>
>> This past week, five or six government officials were ambushed and
>> killed along the same isolated road where a Red Cross water engineer
>> was executed in late March.
>>
>> The mood in the province is so tense that when a major dust storm
>> developed earlier last week, blotting out the sky with mustard-colored
>> sand, some Kandaharis read it as a portent.
>>
>> "It just feels like something is building," said Sarah Chayes, an

>> American former journalist who now runs a pro-democracy group called
>> Afghans for Civil Society.
>>
>> "One year ago I didn't have any problem driving around Kandahar by
>> myself. Now I feel it is a lot more dangerous."
>>
>> Kandahar's mounting security problems have dire consequences for the
>> province's poorest people.
>>
>> In the four months since the execution of the Red Cross engineer, the
>> number of nongovernmental organizations with foreign workers in
>> Kandahar has dropped from 22 to just seven or eight, said Talatbek
>> Masadykov, head of the Kandahar office of U.N. Assistance Mission in
>> Afghanistan.
>>
>> Those who have remained often stick close to the city of Kandahar
>> rather than risk traveling to outlying districts. Crucial
>> reconstruction and humanitarian aid, from bridge repairs to food
>> distribution, have slowed or stopped as a result, he said.
>>
>> The growing instability in Kandahar has ominous implications for the
>> rest of Afghanistan.
>>
>> As the heartland of the Pashtuns, whose monarchs ruled Afghanistan for
>> much of the past three centuries, and the place where the Taliban
>> began its rise to power in the early 1990s, Kandahar has long been the
>> trendsetter for the rest of the country.
>>
>> "Kandahar was the first capital of Afghanistan," said Masadykov.
>>
>> "Historically, those who know Afghanistan say that if you can solve
>> the political issues in Kandahar, you can solve the issues in the
>> whole country. If you can't do it in Kandahar, it means that you are
>> lost."

Yep. And we thought Reagan was a moron. As bad as he was, he was no
where near as dangerous to democracy as Bush/Cheney/Ashcroft.

I can't believe there are conservatives who think that because that
triumvirate are "Republicans," that they are good for the United
States and its ideals. Those conservatives are losing every bit as
much of their civil liberties as liberals are.

Wake up, all of you.

Recently, Reuters reported a loss of $631
million, the largest in its 150-year history.
In addition, Reuters announced 3,000 job
cuts, along with the 3,200 jobs cut over
the past two years. Reuters' market
capitalization has plunged by almost 90
percent from its peak, and Reuters' stock
has fallen to a 14-year low.

> Analysis:

And nothing more.

BTW, I lost some recent newsgroup messages from you idiots re. the 2000 Florida recount. Please accept this as my response.

You're asking all of us rational people here to IGNORE the findings of a *Clinton* appointee to the Justice Department (Assistant Attorney General Ralph Boyd, whose resume speaks for itself. Look it up some time), and instead ACCEPT the findings of ONE leftist reporter who can't even get a job in the United States (Palast). You're telling us that Boyd is lying and Palast is telling the truth, which is a laugh and a half.

I have a couple of questions for you.

First of all, how come Palast is the ONLY "source" you howler monkeys can repeatedly cite on this issue to support your side of the 2000 Florida story? And please don't reply with a question, namely why I am accepting the findings of Boyd and Boyd alone. *His* investigation employed more than one person, and his credibility is not in doubt, except to you idiots who call him a liar and worse (one idiot I debated with even called him an "Uncle Tom"). Meanwhile, Palast has been exposed in the past for lying in print about Cynthia McKinney.

Secondly, why didn't you guys complain about the alleged scrubbing of felons from the Florida voting rolls BEFORE the election? Because you knew you would win anyway via vote fraud?

Which leads us to question #3. How come the Democratic Party, either nationally or locally, NEVER sued for alleged vote fraud in Florida, or anywhere else for that matter, after the 2000 election? I'll tell you why. Because they were AFRAID to do so.

"You can change the outcome of any election you want" -Bill Clinton

Ahhhhh, the smell of a nearing election season.
The first sign is the endless flood of anti-Republican messages to newsgroups.
A really quaint practice the DNC has been promoting for the past few elections, it's very ineffectual but it does make for some rather humorous reading from time to time.

Next we'll see the DNC standard talking heads ramble on ad-nausea about the big three "topics", health care, Medicare, and jobs. We'll hear from the poor auto workers who can't make ends meet, the DNC will clean up a few crack whores and parade them and their "home-less chil'ren". For the finale, the ever popular Dot-Comer who's job is going to India!

Get ready kids, the DNC has no real candidate this time around and they are going to pull out all the stops.
Oh, and as for Dean, don't get your hopes up just yet. A REAL big bomb is going to be dropped on his campaign later this fall. Poor fella.

Anyway, have fun hipsters and get out there and vote, vote twice if your a Dem!

You're really a work of art you arrogant son of a bitch. I guess all of these automotive workers should find other better employment which would be a good thing for assholes like you since you wouldn't have the skill to even put together an automobile. Its the corporatists such as yourself who have screwing over the masses for years and thats why you vote for the Republicans. The Republicans are no better than the Democrats because both parties screw the general population. It was some of your Enron types that filled the Republicans pockets just like the big oil monopolists and the banksters who are screwing over the majority of the American populace. Of course, you have your head shoved so far up Rush Windbags ass that you couldn't see reality.

I work in a totally different industry but I did work at one time in an automotive plant. In fact, we weren't unionized and the people in that plant were treated no better than most Southern blacks 50 years ago. The unions are what gave the middle class in this country a voice. Now that all is being taken away and its no wonder why there is so much poverty and problems in the country. Its because the govt and corporates have declared war on the common man.

He is the President of the United States. Not Dubya.

Did you not complete the 4th grade where they taught you how to
address the President?

Its also interesting that the State of Texas passed a right to carry
concealed weapons law while he was the Governor. Doesn't seem like he
is interested in confiscating firearms.

Your story also forgot about how Hitler disbanded the German
legislature and he declared himself supreme dictator. As far as I
have heard the US congress is still in session, the supreme court is
still operating and the armed forces are sworn to uphold and defend
the constitution (not just the orders of president).

Of course you should never let the facts get in the way of your
conspiracy theories.

George Bush was lawfully elected president of the United States in the
electoral college according to the constitution. No president has ever
been elected by "majority vote" in this country. Are you suggesting
that we ignore the constitution and elect a president by majority vote
instead? You complain about rights being violated but clearly you have
never read the constitution which gives you those rights.

The Constitution of the United States:
Article II

Section 1. The executive power shall be vested in a President of the
United States of America. He shall hold his office during the term of
four years, and, together with the Vice President, chosen for the same
term, be elected, as follows:

Each state shall appoint, in such manner as the Legislature thereof
may direct, a number of electors, equal to the whole number of
Senators and Representatives to which the State may be entitled in the
Congress: ...

The electors shall meet in their respective states and vote by ballot for President and Vice-President, one of whom, at least, shall not be an inhabitant of the same state with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President, and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice-President, and of the number of votes for each, which lists they shall sign and certify, and transmit sealed to the seat of the government of the United States, directed to the President of the Senate;--The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates and the votes shall then be counted;--the person having the greatest number of votes for President, shall be the President...

Waste of Bandwidth "Agent Smith" <th@t.other.george.sucks.com> wrote in message news:3f8a938b.870867981@feednread...

> Where's your cite Skippy?

From a leak from a Democrat. First, some background on the Dem who did the leaking:

"CNN obtained a copy of the letter Boyd sent to Sen. Patrick Leahy, D-Vermont,"

Remember, Leahy was also cited and punished for leaking CLASSIFED intelligence info back in the 1990s.

"Sen. Patrick Leahy, D-Vt., (then-)vice chairman of the Senate Intelligence Committee, inadvertently disclosed a top secret communications intercept during a [1985] television interview," reported the San Diego Union-Tribune in a 1987 editorial criticizing Congress' penchant for partisan leaks.

"The intercept, apparently of Egyptian President Hosni Mubarak's telephone conversations, made possible the capture of the Arab terrorists who had hijacked the cruise ship Achille Lauro and murdered American citizens," the paper said, adding, "The reports cost the life of at least one Egyptian operative involved in the operation."

In July 1987, the Washington Times reported that Leahy leaked secret information about a 1986 covert operation planned by the Reagan administration to topple Lybian strongman Moammar Gaddhafi.

"I thought [the operation] was probably the most ridiculous thing I had seen, and also the most irresponsible," the leading Intelligence Committee Democrat allegedly said of the secret plan.

Unidentified U.S. intelligence officials told the Times that Leahy, along with Republican panel chairman Sen. Dave Durenberger, communicated a written threat to expose the operation directly to then-CIA Director William Casey.

Weeks later, news of the secret plan turned up in the Washington Post, causing it to be aborted.

Leahy vehemently denied he talked to the press about any of the administration's covert operations, saying, "I never have, and I'm not going to start now."

But just a year later, as the Senate was preparing to hold hearings on the Iran-Contra scandal, the Vermont senator had to resign his Intelligence Committee post after he was caught leaking secret information to a reporter.

The ranking Intelligence Committee Democrat decided to let an NBC reporter comb through the committee's confidential draft report on the scandal. The network aired a report based on the inside information on Jan. 11, 1987.

After a six-month internal investigation, Leahy "voluntarily" stepped down from his committee post, releasing a statement calling his resignation "a suitable way to express ... anger and regret" over his lapse.

Leahy's anger, he said, was at himself, "for carelessly allowing the press person to examine the unclassified draft and to be alone with it."

The Vermont Democrat's Iran-Contra leak was considered to be one of the most serious breaches of secrecy in the committee's 10-year history.

After Leahy's resignation, the Senate Intelligence Committee decided to restrict access to committee documents to a security-enhanced meeting room.

In fact, the final committee report turned out to be considerably different from Leahy's leaked draft.

NewsMax.com first reported those inconvenient details from Leahy's resume in January, when he was leading the charge against Bush Attorney General nominee John Ashcroft.

Now that the Vermont Democrat is up to his hold tricks again, trying to scuttle Mr. Olson's nomination despite stellar character references from Democratic Party legal stars Laurence Tribe and Robert Bennett, perhaps Landmark's request will prompt Chairman Shelby to consider filling in the blanks in Leahy's record.

And this is from a liberal news outlet, no less. When will you idiots ever learn?

http://www.cnn.com/2002/ALLPOLITICS/05/28/justice.florida.voting/

WASHINGTON (CNN) -- The Justice Department has concluded that the vast majority of Floridians were not denied their right to vote during the 2000 presidential elections, and that the few problems that did exist could not have affected George W. Bush's victory, CNN has learned.

"The Civil Rights Division found no credible evidence in our investigations that Floridians were intentionally denied their right to vote during the November 2000 election," Assistant Attorney General Ralph Boyd wrote in a letter to Capitol Hill on Tuesday.

CNN obtained a copy of the letter Boyd sent to Sen. Patrick Leahy, D-Vermont, chairman of the Senate Judiciary Committee. The letter was sent in response to questions submitted following Boyd's appearance before the panel last week.

Justice Department officials declined comment, but confirmed Boyd had sent a letter to the Senate committee.

Boyd appeared May 21 before the committee and disclosed that lawsuits will likely be brought against three Florida counties following an 18-month investigation.

"Let me be clear, the Civil Rights Division's investigations identified only a limited number of Floridians who were unable to vote, a number that does not reasonably cast any doubt on President Bush's several hundred vote margin of victory in Florida," Boyd said.

"We did identify and speak with voters who told us they experienced difficulty while voting," Boyd said. "We also found some localized, but significant pockets of confusion and delay in certain counties, often resulting from lack of language assistance," Boyd said.

"I want to emphasize however that while these conditions may have been significant in some areas, the Civil Rights Division has identified very few voters who actually were prevented from voting or left the polls because of these conditions," he concluded.

The civil rights chief did not identify the three counties where lawsuits are expected to be filed, but said most of the difficulties involved language problems and lack of assistance for Spanish-speaking voters. In one county, two Haitian-speaking voters were denied language assistance, Boyd said.

"I am pleased to say that these three jurisdictions are cooperating in our efforts to address deficiencies in their voting procedures," Boyd said.

"You can change the outcome of any election you want" -Bill Clinton

While I agree one "can" monitor a trunk system with a conventional scanner
on a TRS with only a few users, this concept will not work in a large city.
For example, on San Bernardino Counties, West Valley system, there are just
too many users to follow any conversation using a conventional scanner.
Looking at the list of talgroups and associated users on the El Paso system,
I'd say you would indeed need a trunking capable scanner to follow
conversations on this system.

August 6, 2003
Shortchanging Security

The Associated Press headline picked up by newspapers across the country last week said it all: "Air Marshal Program Could Be Cut, Despite Hijacking Threat." That was not exactly welcome news to millions of Americans at the height of the summer travel season, and the ensuing uproar helped kill the proposed spending cuts. Yet sadly enough, the story line was all too familiar. The Bush administration and Congressional leaders in Washington have been too reluctant to devote enough resources to protect the nation against terrorism.

A sense of complacency at this time would be inexcusable under any circumstances, but it is reckless when intelligence points to the likelihood
of more terrorist attacks on aviation. President Bush called it a "real threat" at his press conference last week. The government is so concerned, it now requires travelers who need a visa to visit the United States to obtain one when merely changing planes here, say, en route to Paris from Rio.

Federal airport screeners and airlines have also been put on notice that Al Qaeda terrorists may be adapting cameras or other electronic devices into weapons. Aviation security has been substantially upgraded since the Sept. 11 attacks, but airliners remain the most alluring terrorist target all the same.

That is why it would be so wrong to roll back the air marshal program now. As the mounting threats were disclosed, a leaked memo from an official with the federal air marshal service cited budgetary concerns in urging regional offices to drop flights requiring overnight stays. The war on terror, apparently, must be waged on a day trip.

On Sunday, appearing on the NBC News program "Meet the Press," Tom Ridge, Homeland Security Secretary, conceded that the juxtaposition of proposed spending cuts and new threats amounted to an "unusual sequence of events." We'll say. He then reassured viewers that there would be no curtailment in the air marshal program that puts thousands of undercover law-enforcement agents on an undisclosed number of flights.

Mr. Ridge did not address the budgetary constraints faced by the Transportation Security Administration, the agency within his department established in the aftermath of the Sept. 11 attacks. The agency has received nearly $1 billion less than it has sought from Congress, forcing layoffs and the postponement of air marshal training.

Inadequate resources have also been devoted to the securing of airport perimeters and cargo facilities, not to mention ports and energy plants. These needs must be addressed.

245. Memo Reveals California Recall as Bush Strategy

Newsgroup: rec.radio.scanner
Date: 2003-08-07 15:02:52 UTC
From: Sidewinder@bush.sucks

While White House and national GOP officials insist they won't get involved in the California recall, a memo obtained by The Chronicle outlines a Republican strategy to oust Gov. Gray Davis and help President Bush before the 2004 presidential election.

The memo by California GOP organizer Julie Leitzell, who heads a political action committee called CommonSense Direction, says the Oct. 7 recall election presents an opportunity to target disaffected voters -- particularly women.

"We will work outside of the campaigns and outside of the party," the memo to Republican activists says. "None of the candidates will be attending, as we want to make sure the media are steered toward the 'common sense women against Davis' angle."

Leitzell's memo clearly suggests the imprimatur of the White House.

"Mindy Tucker, former Bush campaign spokesperson and current Bush campaign operative in California, has the White House's blessing to set the record straight: The person responsible for this recall is sitting behind the governor's desk," the memo says.

Both Tucker and officials at the Republican National Committee denied Tuesday direct involvement and -- mirroring earlier statements by the White House -- said the recall election is "a matter to be decided by the people of California."

A high-level GOP official, speaking not for attribution, characterized the plan by Leitzell, a former communications adviser to 2002 gubernatorial candidate Bill Simon, as the work of an enthusiastic -- but unofficial -- party volunteer.

"To suggest that there is White House involvement in this particular activity would be incorrect," said Tucker, a spokeswoman for Bush's 2000 presidential campaign and former high-level Republican National Committee staff member who is now working full time for the GOP in California.

But, she added, "the president has given everybody in California his blessing to take a position on this . . . and as a Republican woman in California, I feel strongly that Gray Davis has been an awful governor."

Leitzell, reached Tuesday night, downplayed her role in a larger GOP strategy, saying she was a grassroots volunteer who had no connection to the
White House or the Republican National Committee.

But her memo says Tucker, California Republican Party spokeswoman Karen Hanretty, and Tracy Schmitt -- formerly with the RNC and now with the Bush-Cheney 2004 campaign -- "will be coordinating seven simultaneous media-friendly events throughout California, (and) we have been asked to call the Bay Area's attention to just how much Gray Davis will cost us if he were left in office."

The memo states "the resulting issue-oriented and image-enhancing coverage will benefit the image of the Republican Party, the recall candidates, and will benefit President Bush as we remind the public of who is to blame for the mess in this state."

RECEIVES GUIDANCE
Though she said her work is separate from party operations, Leitzell acknowledged she has received guidance from GOP decisionmakers.

"Mindy (Tucker) talks to us occasionally, and she's there to guide us as far
as what we can do, as far as organizing events," she said. "She's there for us, so is Karen (Hanretty) . . . and Tracy (Schmitt)."

With just four days left to file as replacement candidates in the recall election -- and a week before Bush arrives in California for two days of official business and fund raising -- the memo reflects what many Republicans say should be an active approach to take advantage of the recall
in a state that has been dominated recently by Democrats.

While the White House and Bush's chief political adviser Karl Rove "don't have to get involved, they can tell Republicans: Send money, open up your checkbooks," said a senior Republican Party strategist. "Give to Tom, Dick and Harry. Give to (Hustler publisher) Larry Flynt, for all I care. Just give."

Said GOP strategist Sean Walsh: "The Democrats (in California) are going to come unglued, and it's going to bleed over into the presidential race. You can either let the recall drive you -- or you can drive elements of the recall to your advantage."

TRYING TO PICK UP GROUND
Walsh added: "If this recall is going to happen, and Gray has alienated women, you can't fault Republicans for trying to pick up some ground."

The White House and the Republican National Committee leadership have taken pains to distance themselves from the recall because "any involvement . . . would give the Democrats opportunity to tie the White House to this, and say
'it's a Karl Rove-driven conspiracy,' " said a GOP adviser to the White House.

White House advisers and insiders have stressed repeatedly that neither the president nor high-level party officials intend to endorse any candidate in the recall race.

One reason for caution: In the 2002 California's governor's race, the White House backed former Los Angeles Mayor Richard Riordan, only to be embarrassed when the moderate mayor was handily defeated in the GOP primary by Simon, a conservative who was then defeated in November 2002 by Davis.

TIMELY MESSAGE
But Republicans strategists -- including Tucker and Hanretty -- acknowledge the statewide recall will provide an unexpectedly rich, and timely, opportunity to get out the party's message on a stage before California's 15.2 million registered voters as they begin to turn their attention to the next presidential race.

Bush will draw that contrast in campaign events and official visits to San Diego on Aug. 14 and the Los Angeles area on Aug. 15.

"Nothing defines the difference in leadership between Democrats and Republicans than a comparison between the weak, failed leadership of Gray Davis and the very successful leadership of George W. Bush," Hanretty said. "And certainly, every day that Gray is in office is one more day to draw the
distinct comparison with voters."

And Tucker said, "We've identified some areas where the recall will help us build the party -- not only for the recall, but also for '04, which everyone
believes is important."

GOP's strategy memo seeks women's vote
Excerpts from a memo by California GOP organizer Julie Leitzell, outlining Republican strategies to oust Gov. Gray Davis in the recall election:

"How much has Gray Davis cost every family and taxpayer in California? How much more will the bill come to if he is left in office? Whether we were for
or against the recall as a political strategy, it's important that we use this opportunity (and hot news hook) to present an image of diverse Republican women (moms, educators, business owners, students, working women)
united around fiscal responsibility and against the job-killing policies of Davis' regime."

"We will work outside of the campaigns and outside of the party. None of the
candidates will be attending as we want to make sure the media are steered toward the 'common-sense women against Davis' angle. The resulting issue-oriented and image-enhancing coverage will benefit the image of the Republican Party, the recall candidates, and will benefit President Bush as we remind the public of who is to blame for the mess in this state. We are working on getting a big-name female draw for each local event."

I agree. For the political (and other OT posters), you will get a much more sympathetic audience elsewhere.
In fact you might well alienate your cause by repeated OT posting.

Moderated news groups prevent the OT's, at the peril of restricting freedom of speech and stifling creativity -- but all the OT's here is a good example why group moderation is becoming more popular -- see Yahoo groups URL: http://groups.yahoo.com/

For the real Radio Types here, I would suggest not responding to the OT's, otherwise the News Group will end up with no or very little Radio related content -- which this morning it did !!

Find you a RANGER 2950. It's a 10 meter 12 meter ham radio that can be easily modified to transmit on 11 meters (the cb frequencies). It's a great radio and has excellent sound quality - you can also control your output power with the rig.

If you really want to be the envy of all your friends, go to a hearing specialist in your area and have them order you a wireless one - it fits in your ear like a tiny hearing aid - you can hardly see it. It has a bluetooth transmitter that connects to your headphone jack on your radio. It transmits to the hearing aid so you can be listening to your scanner or ham radio and no one will know! Great for church! I'm just kidding...sorta.

none

Look for a Yeasu VR120. They were closed out for ~ $100 when they introduced the 120D. Same radio but with external power/charger jack. You may be able to find some by calling around to different on-line places or thru e-bay. I have one and like it a bunch.

Pentagon makes moves to contain complaints from US troops in Iraq
Written by Douglas Quenqua
Published on August 04 2003

WASHINGTON: After several troops made some highly publicized negative comments to the media about the war effort in Iraq, the Pentagon has taken steps to keep the frustrations of both soldiers and their families out of reports.

According to a story in the July 25 edition of Stars and Stripes, the military appears to be curtailing its much-touted embedded-journalist program, which has allowed reporters almost unfettered access to military units throughout the war and occupation.

The 3rd Infantry Division, from where many complaints have arisen, has expelled many of its embedded reporters, and its troops are no longer allowed to talk to the media outside of pre-approved news features.

Lt. Col. Michael Birmingham, 3rd ID spokesman in Baghdad, told the military paper that the division is "no longer embedding for short stays." According to the report, exceptions to the policy have been made for three journalists
who were embedded during the war and have returned to Iraq.

Soldiers' families are also being advised not to complain to the media, according to news reports.

After being told that 3rd ID soldiers would be staying in Iraq longer than expected, families received an e-mail message from a rear-detachment commander warning against contacting the press "in a negative manner regarding the military and this deployment."

The sharpest and most widely reported criticism by troops came on July 16, when a handful of tired and seemingly disillusioned troops from the 3rd ID offered scathing remarks about top Pentagon brass to an ABC News reporter. One called on Secretary of Defense Donald Rumsfeld to resign, and another said, "I've got my own most-wanted list," which included Rumsfeld and President Bush.

Back in the US, there have been several accounts of frustrated military families who are upset about their loved ones' long deployments in Iraq.

Democrats bash Bush in Chicago

August 6, 2003

BY SCOTT FORNEK Political Reporter

Former House Minority Leader Dick Gephardt reminded the crowd at Navy Pier that his father was a Teamster and milk truck driver. North Carolina Sen. John Edwards told them of toiling next to mill workers with "lint in their hair and grease on their faces."

And Massachusetts Sen. John Kerry stressed that he was the only Vietnam veteran among the Democrats hoping to oust President Bush.

"I cannot wait to stand up and remind him that having a skilled Navy pilot land you on an aircraft carrier in a borrowed suit does not make up for losing 3 million jobs," Kerry said. "It does not make up for going back on civil rights. It does not make up for failed economic policies."

BEST AD LIB

"I had a non-union cab driver."
--The Rev. Al Sharpton, explaining to the 2,000 union members in the audience why he arrived at the forum after it had already begun.

WORST AD LIB

"Maybe the first thing I should say, the first thing I will do if I'm elected president is not re-appoint John Ashcroft attorney general of the United States." --Sen. Joseph Lieberman, after Sharpton delivered an impassioned attack on Ashcroft.

The Democratic presidential sweepstakes rolled back into Chicago on Tuesday,
providing nine hopefuls a chance to stress their union credentials, take a few jabs at one another and a lot more at Bush.

"This is the president who has lost the trust of the American people," said Florida Sen. Bob Graham. "This is a president who repeatedly used misleading
information to make the case for a war in Iraq--that I opposed. Some others on this stage tonight supported it. ... Are we really surprised that the man
who as president of the Texas Rangers traded Sammy Sosa is having such trouble running our national economy?"

The Democratic presidential forum, held by the AFL-CIO, was the first time all nine Democrats appeared together in Chicago. In June, seven of the nine appeared at a Rainbow/PUSH forum.

On Tuesday, labor issues were front and center as an estimated 2,000 union members listened to the Democrats square off.

"We must have a commitment from this party that labor will not be treated as
a special interest," said the Rev. Al Sharpton. "Labor is the interest of this party."

Former Illinois Sen. Carol Braun said "organized labor has given us the middle class, and if we're going to fight for the middle class, we've got to
fight for unions."

Gephardt had the most riding on Tuesday's gathering. A fierce opponent of free-trade pacts, the Missouri congressman is considered the only one of the
Democrats with a shot of picking up the labor organization's early backing.

"This administration has declared war on the middle class in this country--83,000 jobs have been lost a month," Gephardt said. "This president
is the Houdini of economics. Three million jobs have disappeared. He's got the worst record since Herbert Hoover."

The AFL-CIO Executive Council will meet today to discuss whether the organization will make an endorsement before the primary.

It has only done so twice in the past 20 years, and both of those Democrats wound up losing the White House, Walter Mondale in 1984 and Al Gore in 2000.

Earlier in the day, Gephardt picked up the endorsement of the United Steelworkers of America, his ninth from a major labor organization. An AFL-CIO endorsement would require the support of two-thirds of its 13 million members.

Singling out unions in the crowd by the color of their T-shirts and touting his role in leading the fight against the North American Free Trade Agreement, Gephardt said "check our records.''

"Check who was there when the fat was in the fire," he said.

But Ohio Congressman Dennis Kucinich pledged to cancel NAFTA and U.S. involvement in the World Trade Organization if he is elected, and he challenged others to make the same pledge.

"My good friend, Dick Gephardt, will you cancel NAFTA? Will you cancel the WTO, which you voted for?" Kucinich asked. "[Former Vermont Gov.] Howard Dean, will you cancel NAFTA? Will you cancel the WTO? ... Answer the question."

Sharpton feigned surprise at the attacks.

"I thought we weren't going to get nasty until at least September," he said.

Asked about his state's right-to-work laws, Edwards went into an emotional description of his family's work in unions.

"My younger brother is a member of the IBEW," he said. "His wife and his family have health insurance because of a union. My mother is a retired member of the letter carriers union. ... This is personal for me."

He closed by telling of working in a mill in North Carolina.

"My father worked in a mill all his life," he said. "I was the first person in my family to go to college, and when I was young, I myself worked in the mills with my father. I will never forget the men and women I saw there with
lint in their hair and grease on their faces, proud of what they were doing--working hard to try to build a better life for their families."

But it was Sharpton who got the only standing ovation, when he told the crowd, "We have an attorney general that can't find corporate-greed criminals but can put every union leader under investigation in the labor movement."

Calling himself "an independent-minded Democrat who wants to pick up the torch of Bill Clinton and Al Gore," Connecticut Sen. Joseph Lieberman defended his support for free trade and drew boos for backing school vouchers.

"I'm going to speak the truth," the former vice presidential nominee said. "I'm going to say what I think is best for America."

The moderate Lieberman attacked Dean as being too liberal on Monday. And on Tuesday, Dean answered by emphasizing his opposition to the war in Iraq, Bush's tax cuts and other GOP policies.

"You can't beat President Bush by trying to be like him," he said. "We tried
that in 2002, and it doesn't work."

Is there anyone in the Niagara Region that listens to the Maxtel Wireless system between 420.00 and 421.00 mhz, I have noticed a lot of different business on this system from St. Catharines, Niagara Falls Canada and so on AirBus out of Niagara Falls ON. is one of the companies that are on this system, I see that there are no CTCSS Tones showing up when I fallow them from frequency to frequency, so I think that this is some kind of trunked system but I can't seem to figure the system out to set it up so I can fallow the conversations from one frequency to another. Is there anyone that has the system set up on there scanner that can help me.
Steve

There is a way to clear all saved frequencies simultaneously by holding three buttons and turning the unit on at the same time. Which three buttons do you hold?

Mike

That's correct! A group of people come here because this place has alot ol likeminded people. I agree!

>
>That's the way Usenet works.

It's more than that Skippy You are over simplifying it.

When a group of likeminded people gets together they are free to share their points of view with the other members of the group. It stimulates healthy conversation. You may not agree with the conversation or want to get involved. In that case you are free to ignore any posts that intimidate you or make you uneasy. On the other hand there are people responding to these news bits because it tweaks something in them to respond. Those responses are what make up conversation Skippy. It's just healthy conversation. If you are not interested, don't respond.....

>If you want to diss President Bush, then go to one of the following:

No, if someone wants to diss President Bush he or she can diss him anywhere they choose. Remember, this is Usenet. The Bush regime hasn't taken it over yet.

Oh please stop it your making me laugh. Also, be careful, you sound like a Marxist, Mr. Constitutionalist1!

The "common worker" is slitting his/her own throat by demanding higher wages for what is in MOST cases (including the auto industry) a mindless job that takes absolutely NO talent or teachable skill.

They want to make the same money turning bolts that someone with a degree makes. Now let's put this into prospective:
Auto worker = HSD/GED = $40,000 year
Network Engineer = 2 year degree = $28K-$40K
You Liberals are as they say in the ghetto, "off da hook".

This is why the auto industry is outing you old timers and hiring in people at what the job is worth.

Get a grip and look at your own sorry self to find the answers why your a loser and stop blaming others because your too damn lazy!

And by the way, I agree that Rush is a blowhard, but he's pretty much right on target!

272. Bearcat BC-160 HELP

Newsgroup: rec.radio.scanner
Date: 2003-08-08 00:44:07 UTC
From: CH <hoddere@nf.sympatico.ca>
Message-ID: <3F32F0F1.1344@nf.sympatico.ca>
Source record: 27374

Can someone help me on info on the Bearcat BC-160?

I'm looking for an owners manual BUT I also want info on a strange edge connector much like one found on the back of a Commodore vic 20 or C64. A plastic cap removes to reveal this connector but it's not marked.

It's also one of the few scanners from the early 80's with 100% electronic push buttons to control everything including squelch and volume.

I searched the web but found very little except people looking for a manual or info like myself. Must be a rare scanner.

This is what I do know:

Bearcat BC 160 with Search Mode
Covers 32-50 MHz 144-174 MHz 450-512 MHz
AC Power Only

you know, they can still appear on TV, Echannel,
entertainment, and Jay Leno even if they're expatriates. i
would rather Gore was the president and they stayed. it would
be the lesser of two evils.

Its a volunteer military! If they don't want to do their job then
discharge them and send them home. Dont ya just love it when a guy
takes the pay with a smile but then complaines when its time to do the
job?

That, and, for good or bad, the Uniform Code of Military Justice forbids any speech against superior officers, including, but not limited to, Cheifs of Staff, Secretary of Defense, President, Vice President..

I use ScanControl with my 245, and like it very much. Ken is constantly making improvements to the program, and is in the process of adding full support for the 780. ScanControl does fully support the 785D, the 250D, and the Pro-2052, as well as the 245. It will only work for memory management on the 780 at this time. I haven't compared it to the Butel programs that seem so popular with others, but I am quite satisfied with it, and can hardly wait for the version with full support for the 780 to come out.

You probably mean to say that nobody is addressing the president in
first person where the proper form is to say: "Mr. President".

When talking about the President (addressing him in third person), it
is proper to say: "President Bush", or "the President of the United
States". Never say: "Mr Bush".

Using the term "Dubya" will only show that you are an uneducated hack.
If you want any respect at all you must first show respect for others,
even when you disagree.

> President or Vice President at all?

The United States of America was not created by the people directly
but rather it was created by consent of the 13 original states. The
number of States has expanded to 50 but the president is still
selected by the states through the electoral college, not by majority
vote of the people. Your vote is still important because it decides
how your State will vote in the electoral college. President Bush won
the majority of the States in the last election. Because some of the
more populated states voted for Gore, he ended up getting slightly
more than 50 percent of the total votes cast in the whole country. As
far as I'm concerned, anyone who says that President Bush was not
properly elected is going against the Constitution and thus is

speaking Treason.

Former Vice President Al Gore
Remarks to MoveOn.org
New York University
August 7, 2003

-AS PREPARED-

Ladies and Gentlemen:

Thank you for your investment of time and energy in gathering here today. I would especially like to thank Moveon.org for sponsoring this event, and the
NYU College Democrats for co-sponsoring the speech and for hosting us.

Some of you may remember that my last formal public address on these topics was delivered in San Francisco, a little less than a year ago, when I argued
that the President's case for urgent, unilateral, pre-emptive war in Iraq was less than convincing and needed to be challenged more effectively by the
Congress.

In light of developments since then, you might assume that my purpose today is to revisit the manner in which we were led into war. To some extent, that
will be the case - but only as part of a larger theme that I feel should now
be explored on an urgent basis.

The direction in which our nation is being led is deeply troubling to me -- not only in Iraq but also here at home on economic policy, social policy and
environmental policy.

Millions of Americans now share a feeling that something pretty basic has gone wrong in our country and that some important American values are being placed at risk. And they want to set it right.

The way we went to war in Iraq illustrates this larger problem. Normally, we
Americans lay the facts on the table, talk through the choices before us and
make a decision. But that didn't really happen with this war -- not the way it should have. And as a result, too many of our soldiers are paying the highest price, for the strategic miscalculations, serious misjudgments, and historic mistakes that have put them and our nation in harm's way.

I'm convinced that one of the reasons that we didn't have a better public debate before the Iraq War started is because so many of the impressions that the majority of the country had back then turn out to have been completely wrong. Leaving aside for the moment the question of how these false impressions got into the public's mind, it might be healthy to take a hard look at the ones we now know were wrong and clear the air so that we can better see exactly where we are now and what changes might need to be made.

In any case, what we now know to have been false impressions include the following:

(1) Saddam Hussein was partly responsible for the attack against us on September 11th, 2001, so a good way to respond to that attack would be to invade his country and forcibly remove him from power.

(2) Saddam was working closely with Osama Bin Laden and was actively supporting members of the Al Qaeda terrorist group, giving them weapons and money and bases and training, so launching a war against Iraq would be a good way to stop Al Qaeda from attacking us again.

(3) Saddam was about to give the terrorists poison gas and deadly germs that
he had made into weapons which they could use to kill millions of Americans.
Therefore common sense alone dictated that we should send our military into Iraq in order to protect our loved ones and ourselves against a grave threat.

(4) Saddam was on the verge of building nuclear bombs and giving them to the
terrorists. And since the only thing preventing Saddam from acquiring a nuclear arsenal was access to enriched uranium, once our spies found out that he had bought the enrichment technology he needed and was actively trying to buy uranium from Africa, we had very little time left. Therefore it seemed imperative during last Fall's election campaign to set aside less urgent issues like the economy and instead focus on the congressional resolution approving war against Iraq.

(5) Our GI's would be welcomed with open arms by cheering Iraqis who would help them quickly establish public safety, free markets and Representative Democracy, so there wouldn't be that much risk that US soldiers would get bogged down in a guerrilla war.

(6) Even though the rest of the world was mostly opposed to the war, they would quickly fall in line after we won and then contribute lots of money and soldiers to help out, so there wouldn't be that much risk that US taxpayers would get stuck with a huge bill.

Now, of course, everybody knows that every single one of these impressions was just dead wrong.

For example, according to the just-released Congressional investigation, Saddam had nothing whatsoever to do with the attacks of Sept. 11.

Therefore,
whatever other goals it served -- and it did serve some other goals -- the decision to invade Iraq made no sense as a way of exacting revenge for 9/11.
To the contrary, the US pulled significant intelligence resources out of Pakistan and Afghanistan in order to get ready for the rushed invasion of Iraq and that disrupted the search for Osama at a critical time. And the indifference we showed to the rest of the world's opinion in the process undermined the global cooperation we need to win the war against terrorism.

In the same way, the evidence now shows clearly that Saddam did not want to work with Osama Bin Laden at all, much less give him weapons of mass destruction. So our invasion of Iraq had no effect on Al Qaeda, other than to boost their recruiting efforts.

And on the nuclear issue of course, it turned out that those documents were actually forged by somebody -- though we don't know who.

As for the cheering Iraqi crowds we anticipated, unfortunately, that didn't pan out either, so now our troops are in an ugly and dangerous situation.

Moreover, the rest of the world certainly isn't jumping in to help out very much the way we expected, so US taxpayers are now having to spend a billion dollars a week.

In other words, when you put it all together, it was just one mistaken impression after another. Lots of them.

And it's not just in foreign policy. The same thing has been happening in economic policy, where we've also got another huge and threatening mess on our hands. I'm convinced that one reason we've had so many nasty surprises in our economy is that the country somehow got lots of false impressions about what we could expect from the big tax cuts that were enacted, including:

(1) The tax cuts would unleash a lot of new investment that would create lots of new jobs.

(2) We wouldn't have to worry about a return to big budget deficits -- because all the new growth in the economy caused by the tax cuts would lead to a lot of new revenue.

(3) Most of the benefits would go to average middle-income families, not to the wealthy, as some partisans claimed.

Unfortunately, here too, every single one of these impressions turned out to
be wrong. Instead of creating jobs, for example, we are losing millions of jobs -- net losses for three years in a row. That hasn't happened since the Great Depression. As I've noted before, I was the first one laid off.

And it turns out that most of the benefits actually are going to the highest
income Americans, who unfortunately are the least likely group to spend

money in ways that create jobs during times when the economy is weak and unemployment is rising.

And of course the budget deficits are already the biggest ever - with the worst still due to hit us. As a percentage of our economy, we've had bigger ones -- but these are by far the most dangerous we've ever had for two reasons: first, they're not temporary; they're structural and long-term; second, they are going to get even bigger just at the time when the big baby-boomer retirement surge starts.

Moreover, the global capital markets have begun to recognize the unprecedented size of this emerging fiscal catastrophe. In truth, the current Executive Branch of the U.S. Government is radically different from any since the McKinley Administration 100 years ago.

The 2001 winner of the Nobel Prize for Economics, George Akerlof, went even further last week in Germany when he told Der Spiegel, "This is the worst government the US has ever had in its more than 200 years of history...This is not normal government policy." In describing the impact of the Bush policies on America's future, Akerloff added, "What we have here is a form of looting."

Ominously, the capital markets have just pushed U.S. long-term mortgage rates higher soon after the Federal Reserve Board once again reduced discount rates. Monetary policy loses some of its potency when fiscal policy
comes unglued. And after three years of rate cuts in a row, Alan Greenspan and his colleagues simply don't have much room left for further reductions.

This situation is particularly dangerous right now for several reasons: first because home-buying fueled by low rates (along with car-buying, also a
rate-sensitive industry) have been just about the only reliable engines pulling the economy forward; second, because so many Americans now have Variable Rate Mortgages; and third, because average personal debt is now at an all-time high -- a lot of Americans are living on the edge.

It seems obvious that big and important issues like the Bush economic policy
and the first Pre-emptive War in U.S. history should have been debated more thoroughly in the Congress, covered more extensively in the news media, and better presented to the American people before our nation made such fateful choices. But that didn't happen, and in both cases, reality is turning out to be very different from the impression that was given when the votes -- and the die -- were cast.

Since this curious mismatch between myth and reality has suddenly become commonplace and is causing such extreme difficulty for the nation's ability to make good choices about our future, maybe it is time to focus on how in the world we could have gotten so many false impressions in such a short period of time.

At first, I thought maybe the President's advisers were a big part of the problem. Last fall, in a speech on economic policy at the Brookings Institution, I called on the President to get rid of his whole economic team
and pick a new group. And a few weeks later, damned if he didn't do just that - and at least one of the new advisers had written eloquently about the
very problems in the Bush economic policy that I was calling upon the President to fix.

But now, a year later, we still have the same bad economic policies and the problems have, if anything, gotten worse. So obviously I was wrong: changing
all the president's advisers didn't work as a way of changing the policy.

I remembered all that last month when everybody was looking for who ought to
be held responsible for the false statements in the President's State of the
Union Address. And I've just about concluded that the real problem may be the President himself and that next year we ought to fire him and get a new one.

But whether you agree with that conclusion or not, whether you're a Democrat
or a Republican -- or an Independent, a Libertarian, a Green or a Mugwump --
you've got a big stake in making sure that Representative Democracy works the way it is supposed to. And today, it just isn't working very well. We all need to figure out how to fix it because we simply cannot keep on making
such bad decisions on the basis of false impressions and mistaken assumptions.

Earlier, I mentioned the feeling many have that something basic has gone wrong. Whatever it is, I think it has a lot to do with the way we seek the truth and try in good faith to use facts as the basis for debates about our future -- allowing for the unavoidable tendency we all have to get swept up in our enthusiasms.

That last point is worth highlighting. Robust debate in a democracy will almost always involve occasional rhetorical excesses and leaps of faith, and
we're all used to that. I've even been guilty of it myself on occasion. But there is a big difference between that and a systematic effort to manipulate
facts in service to a totalistic ideology that is felt to be more important than the mandates of basic honesty.

Unfortunately, I think it is no longer possible to avoid the conclusion that
what the country is dealing with in the Bush Presidency is the latter. That is really the nub of the problem -- the common source for most of the false

impressions that have been frustrating the normal and healthy workings of our democracy.

Americans have always believed that we the people have a right to know the truth and that the truth will set us free. The very idea of self-government depends upon honest and open debate as the preferred method for pursuing the truth -- and a shared respect for the Rule of Reason as the best way to establish the truth.

The Bush Administration routinely shows disrespect for that whole basic process, and I think it's partly because they feel as if they already know the truth and aren't very curious to learn about any facts that might contradict it. They and the members of groups that belong to their ideological coalition are true believers in each other's agendas.

There are at least a couple of problems with this approach:

First, powerful and wealthy groups and individuals who work their way into the inner circle -- with political support or large campaign contributions -- are able to add their own narrow special interests to the list of favored goals without having them weighed against the public interest or subjected to the rule of reason. And the greater the conflict between what they want and what's good for the rest of us, the greater incentive they have to bypass the normal procedures and keep it secret.

That's what happened, for example, when Vice President Cheney invited all of those oil and gas industry executives to meet in secret sessions with him and his staff to put their wish lists into the administration's legislative package in early 2001.

That group wanted to get rid of the Kyoto Treaty on Global Warming, of course, and the Administration pulled out of it first thing. The list of people who helped write our nation's new environmental and energy policies is still secret, and the Vice President won't say whether or not his former company, Halliburton, was included. But of course, as practically everybody in the world knows, Halliburton was given a huge open-ended contract to take over and run the Iraqi oil fields-- without having to bid against any other companies.

Secondly, when leaders make up their minds on a policy without ever having to answer hard questions about whether or not it's good or bad for the American people as a whole, they can pretty quickly get into situations where it's really uncomfortable for them to defend what they've done with simple and truthful explanations. That's when they're tempted to fuzz up the facts and create false impressions. And when other facts start to come out that undermine the impression they're trying to maintain, they have a big incentive to try to keep the truth bottled up if -- they can -- or distort it.

For example, a couple of weeks ago, the White House ordered its own EPA to strip important scientific information about the dangers of global warming out of a public report. Instead, the White House substituted information that was partly paid for by the American Petroleum Institute. This week, analysts at the Treasury Department told a reporter that they're now being routinely ordered to change their best analysis of what the consequences of the Bush tax laws are likely to be for the average person.

Here is the pattern that I see: the President's mishandling of and selective
use of the best evidence available on the threat posed by Iraq is pretty much the same as the way he intentionally distorted the best available evidence on climate change, and rejected the best available evidence on the threat posed to America's economy by his tax and budget proposals.

In each case, the President seems to have been pursuing policies chosen in advance of the facts -- policies designed to benefit friends and supporters -- and has used tactics that deprived the American people of any opportunity to effectively subject his arguments to the kind of informed scrutiny that is essential in our system of checks and balances.

The administration has developed a highly effective propaganda machine to imbed in the public mind mythologies that grow out of the one central doctrine that all of the special interests agree on, which -- in its purest form -- is that government is very bad and should be done away with as much as possible -- except the parts of it that redirect money through big contracts to industries that have won their way into the inner circle.

For the same reasons they push the impression that government is bad, they also promote the myth that there really is no such thing as the public interest. What's important to them is private interests. And what they really mean is that those who have a lot of wealth should be left alone, rather than be called upon to reinvest in society through taxes.

Perhaps the biggest false impression of all lies in the hidden social objectives of this Administration that are advertised with the phrase "compassionate conservatism" -- which they claim is a new departure with substantive meaning. But in reality, to be compassionate is meaningless, if compassion is limited to the mere awareness of the suffering of others. The test of compassion is action. What the administration offers with one hand is the rhetoric of compassion; what it takes away with the other hand are the financial resources necessary to make compassion something more than an empty and fading impression.

Maybe one reason that false impressions have a played a bigger role than they should is that both Congress and the news media have been less vigilant
and exacting than they should have been in the way they have tried to hold the Administration accountable.

Whenever both houses of Congress are controlled by the President's party, there is a danger of passivity and a temptation for the legislative branch to abdicate its constitutional role. If the party in question is unusually

fierce in demanding ideological uniformity and obedience, then this problem can become even worse and prevent the Congress from properly exercising oversight. Under these circumstances, the majority party in the Congress has
a special obligation to the people to permit full Congressional inquiry and oversight rather than to constantly frustrate and prevent it.

Whatever the reasons for the recent failures to hold the President properly accountable, America has a compelling need to quickly breathe new life into our founders' system of checks and balances -- because some extremely important choices about our future are going to be made shortly, and it is imperative that we avoid basing them on more false impressions.

One thing the President could do to facilitate the restoration of checks and
balances is to stop blocking reasonable efforts from the Congress to play its rightful role. For example, he could order his appointees to cooperate fully with the bipartisan National Commission on Terrorist Attacks, headed by former Republican Governor Tom Kean. And he should let them examine how the White House handled the warnings that are said to have been given to the
President by the intelligence community.

Two years ago yesterday, for example, according to the Wall Street Journal, the President was apparently advised in specific language that Al Qaeda was going to hijack some airplanes to conduct a terrorist strike inside the U.S.

I understand his concern about people knowing exactly what he read in the privacy of the Oval Office, and there is a legitimate reason for treating such memos to the President with care. But that concern has to be balanced against the national interest in improving the way America deals with such information. And the apparently chaotic procedures that were used to handle the forged nuclear documents from Niger certainly show evidence that there is room for improvement in the way the White House is dealing with intelligence memos. Along with other members of the previous administration,
I certainly want the commission to have access to any and all documents sent
to the White House while we were there that have any bearing on this issue. And President Bush should let the commission see the ones that he read too.

After all, this President has claimed the right for his executive branch to send his assistants into every public library in America and secretly monitor what the rest of us are reading. That's been the law ever since the Patriot Act was enacted. If we have to put up with such a broad and extreme invasion of our privacy rights in the name of terrorism prevention, surely he can find a way to let this National Commission know how he and his staff handled a highly specific warning of terrorism just 36 days before 9/11.

And speaking of the Patriot Act, the president ought to reign in John Ashcroft and stop the gross abuses of civil rights that twice have been

documented by his own Inspector General. And while he's at it, he needs to reign in Donald Rumsfeld and get rid of that DoD "Total Information Awareness" program that's right out of George Orwell's 1984.

The administration hastened from the beginning to persuade us that defending
America against terror cannot be done without seriously abridging the protections of the Constitution for American citizens, up to and including an asserted right to place them in a form of limbo totally beyond the authority of our courts. And that view is both wrong and fundamentally un-American.

But the most urgent need for new oversight of the Executive Branch and the restoration of checks and balances is in the realm of our security, where the Administration is asking that we accept a whole cluster of new myths:

For example, the Comprehensive Nuclear Test Ban Treaty was an effort to strike a bargain between states possessing nuclear weapons and all others who had pledged to refrain from developing them. This administration has rejected it and now, incredibly, wants to embark on a new program to build a
brand new generation of smaller (and it hopes, more usable) nuclear bombs. In my opinion, this would be true madness -- and the point of no return to the Comprehensive Test Ban Treaty -- even as we and our allies are trying to
prevent a nuclear testing breakout by North Korea and Iran.

Similarly, the Kyoto treaty is an historic effort to strike a grand bargain between free-market capitalism and the protection of the global environment,
now gravely threatened by rapidly accelerating warming of the Earth's atmosphere and the consequent disruption of climate patterns that have persisted throughout the entire history of civilization as we know it. This administration has tried to protect the oil and coal industries from any restrictions at all -- though Kyoto may become legally effective for global relations even without U.S. participation.

Ironically, the principal cause of global warming is our civilization's addiction to burning massive quantities carbon-based fuels, including principally oil -- the most important source of which is the Persian Gulf, where our soldiers have been sent for the second war in a dozen years -- at least partly to ensure our continued access to oil.

We need to face the fact that our dangerous and unsustainable consumption of
oil from a highly unstable part of the world is similar in its consequences to all other addictions. As it becomes worse, the consequences get more severe and you have to pay the dealer more.

And by now, it is obvious to most Americans that we have had one too many wars in the Persian Gulf and that we need an urgent effort to develop environmentally sustainable substitutes for fossil fuels and a truly

international effort to stabilize the Persian Gulf and rebuild Iraq.

The removal of Saddam from power is a positive accomplishment in its own right for which the President deserves credit, just as he deserves credit for removing the Taliban from power in Afghanistan. But in the case of Iraq,
we have suffered enormous collateral damage because of the manner in which the Administration went about the invasion. And in both cases, the aftermath
has been badly mishandled.

The administration is now trying to give the impression that it is in favor of NATO and UN participation in such an effort. But it is not willing to pay
the necessary price, which is support of a new UN Resolution and genuine sharing of control inside Iraq.

If the 21st century is to be well started, we need a national agenda that is
worked out in concert with the people, a healing agenda that is built on a true national consensus. Millions of Americans got the impression that George W. Bush wanted to be a "healer, not a divider", a president devoted first and foremost to "honor and integrity." Yet far from uniting the people, the president's ideologically narrow agenda has seriously divided America. His most partisan supporters have launched a kind of 'civil cold war' against those with whom they disagree.

And as for honor and integrity, let me say this: we know what that was all about, but hear me well, not as a candidate for any office, but as an American citizen who loves my country:

For eight years, the Clinton-Gore Administration gave this nation honest budget numbers; an economic plan with integrity that rescued the nation from
debt and stagnation; honest advocacy for the environment; real compassion for the poor; a strengthening of our military -- as recently proven -- and a
foreign policy whose purposes were elevated, candidly presented and courageously pursued, in the face of scorched-earth tactics by the opposition. That is also a form of honor and integrity, and not every administration in recent memory has displayed it.

So I would say to those who have found the issue of honor and integrity so useful as a political tool, that the people are also looking for these virtues in the execution of public policy on their behalf, and will judge whether they are present or absent.

I am proud that my party has candidates for president committed to those values. I admire the effort and skill they are putting into their campaigns.
I am not going to join them, but later in the political cycle I will endorse

one of them, because I believe that we must stand for a future in which the United States will again be feared only by its enemies; in which our country
will again lead the effort to create an international order based on the rule of law; a nation which upholds fundamental rights even for those it believes to be its captured enemies; a nation whose financial house is in order; a nation where the market place is kept healthy by effective government scrutiny; a country which does what is necessary to provide for the health, education, and welfare of our people; a society in which citizens of all faiths enjoy equal standing; a republic once again comfortable that its chief executive knows the limits as well as the powers of the presidency; a nation that places the highest value on facts, not ideology, as the basis for all its great debates and decisions.

Desperate DNC Socialist Hack "Sidewinder" <Sidewinder@DUHBYA.sucks> wrote in message news:77e8075d44ab50ec8c7e7d9c6e96f70d@remailer.frell.eu.org...

> Former Vice President Al Gore

LOL. At least THIS part is the truth. Albie's teaching college now...

> Remarks to MoveOn.org

MoveOn.org, the group which Al Gore spoke before on Thursday in railing against President Bush, is a far-left organization founded to fight against President Clinton's impeachment which later supported only liberal Democrats for office in 2000, protested against the war with Iraq and opposed removing Saddam Hussein, but is all for "regime change" in the U.S., and held an online primary which the liberal Howard Dean won.

But if you rely on CNN, MSNBC, the Washington Post or the New York Times for your news, you'd have no idea about MoveOn.org's ideology since those outlets deliberately disguised it with misleadingly incomplete descriptions of the group.

CNN's Judy Woodruff tagged it simply as an "Internet political group" and the Washington Post generously relayed how it "advertises itself as an 'online grassroots democracy group.""

FNC, AP and even Reuters, however, on Thursday managed to offer accurate ideological descriptions.

On FNC's Special Report with Brit Hume, Carl Cameron asserted: "Al Gore insists he's not running, but he was ranting to a liberal audience from the left-leaning Internet group MoveOn.org, saying that President Bush has deliberately deceived the American people."

The AP's Richard Pyle wrote: "Gore addressed some 600 members of the liberal activist group MoveOn.org, which earlier this year held an online presidential primary in which Howard Dean, a staunch foe of the war, finished first." See: story.news.yahoo.com

Dane Hamilton of Reuters explained: "Speaking at New York University at an event sponsored by liberal political advocacy group MoveOn.org, Gore said Bush deserved credit for removing Iraqi leader Saddam Hussein from power. But he said the war had no effect on the al-Qaeda network, accused of masterminding the Sept. 11 attacks, except to boost the group's "recruiting activities." See: story.news.yahoo.com

The New York Times avoided an ideological description, but at least reporter Randal Archibald, in a story posted Thursday evening, clued in readers on the group's pro-Clinton origins: "Mr. Gore's advisers said he chose to speak out now to fulfill his vow when he bowed out in December to continue expressing concern about the direction of the country. He asked MoveOn.org, an Internet-based policy group born to rebut the Clinton impeachment, to sponsor the speech several weeks ago, his assistants said."
See: www.nytimes.com

But not even that made it into Washington Post reporter Edward Walsh's August 8 story in which he relayed a very laudatory description: "Gore spoke to an enthusiastic audience of mostly young people who were invited by MoveOn.org, which advertises itself as an 'online grassroots democracy group."" See: www.washingtonpost.com

MSNBC's David Shuster, in a piece which aired Thursday night on a bunch of MSNBC shows, didn't even mention the name of the group before whom Gore spoke and the ABC, CBS and NBC evening shows held themselves to brief summaries of Gore's points without going into anything about MoveOn.org.

On CNN's Inside Politics, however, the group was twice described simply as an "Internet political group." Judy Woodruff set up CNN's August 7 story at the very end of a special Schwarzenegger-inspired 90-minute Inside Politics:
"Well, there is one other story we want to share with you, and that is that Al Gore still says he will not seek a rematch against President Bush. But he is sounding more and more like a man who's running for office. He addressed the Internet political group known as MoveOn.org today and he pulled no punches during his speech."

CNN's Maria Hinojosa played a series of Gore soundbites and then observed: "The audience, members of an Internet activist group called MoveOn.org, say they want more Gore."
Eli Pariser, MoveOn.org: "I think it validates the concern that so many Americans are feeling."
Hinojosa: "And there was at least one person still has hopes the former VP will change his mind."
Sherri Rosen, MoveOn.org member: "I mean, Schwarzenegger just did it. He just changed his mind. And so did Jerry Springer. So why can't he change his mind and say he's going to run?"

If you have any doubts about MoveOn.org's liberalness, just check their home page: www.moveon.org

One section highlights their latest crusade:
"The President took the nation to war based on his assertion that Iraq posed an imminent threat to our country. Now central pieces of that evidence have turned out to be false, but many Members of Congress are refusing to seriously investigate.
"Three weeks ago, MoveOn launched a petition asking Congress to create an independent commission to investigate whether the Bush Administration manipulated and distorted evidence to take the country to war in Iraq. Now

Congress is literally taking up our call: Rep. Henry Waxman (D-CA) has written a bill that would create just such a commission, and it's already co-sponsored by a wide array of moderate Democrats -- including many who voted for the war. This commission can really happen -- and the truth about the Bush Administration's manipulation of evidence can really come out -- but we'll need your help...

For their Regime Change Begins at Home poster: www.moveon.org

And for a list of the candidates their PAC supported in 2000, all liberal Democrats: www.moveon.org

Despair of the Jobless

By BOB HERBERT

The folks who put the voodoo back in economics keep telling us that prosperity is just around the corner.

For the unemployed, that would mean more jobs.

Are there more jobs just around the corner?

This alleged economic upturn is not just a jobless recovery, it's a job loss recovery.

The hemorrhaging of jobs in the aftermath of the recent "mild" recession is like nothing the U.S. has seen in more than half a century.

Millions continue to look desperately for work, and millions more have given up in despair.

The stories have been rolling in for some time about the stresses and misfortunes that are inevitably associated with long-term joblessness: the bankruptcies, foreclosures and evictions, the dreams deferred, the mental difficulties -- anxiety, depression -- the excessive drinking and abuse of drugs, the family violence.

There are few things more miserable than to need a job and be unable to find one.

How bad is it?

The Economic Policy Institute in Washington reported last week that "since the business cycle expansion began in November 2001, payrolls have contracted by 1 million (1.2 million in the private sector), making this the weakest recovery in terms of employment since the [Bureau of Labor Statistics] began tracking monthly data in 1939."

John A. Challenger, who runs the outplacement firm Challenger, Gray & Christmas, said it is taking an average of 20 weeks for job seekers to find employment, and many are unable to match their previous salary. "Employers have all the cards," he said.

"Not only are they sharpening their salary pencils, but the screening of candidates is probably the toughest it has ever been."

The official jobless rate, now 6.2 percent, does not come close to reflecting how grim the employment situation really is.

The official rate refers only to those actively seeking work.

It does not count the "discouraged" workers, who have looked for jobs within the last 12 months but have given up because of the lack of offers.

Then there are the involuntary part-timers, who would like full-time jobs but cannot find them.

And there are people who have had to settle for jobs that pay significantly less than jobs they once held.

When you combine the unemployed and the underemployed, you are talking about a percentage of the work force that is in double digits.

That's an awful lot of lost purchasing power for a society that needs broad-based wage growth among its consumers to remain economically viable.

Most Americans depend on their paychecks to get from one week to the next. If you cut off that paycheck, everything tends to go haywire.

Right now there is no plan, no strategy for turning this employment crisis around.

There is not even a sense of urgency.

At the end of July the Bush administration sent its secretaries of commerce, labor and treasury on a bus tour of Wisconsin and Minnesota to tell workers that better days are coming.

But they offered no real remedies, and the president himself went on a monthlong vacation.

The simple truth is that the interests of the Bush administration's primary constituency, corporate America, do not coincide with the fundamental interests of workaday Americans.

On the business side of this divide, increased profits are realized by showing the door to as many workers as possible, and squeezing the remainder to the bursting point.

Productivity (based primarily on improvements in technology) is way up. Hiring, of course, is down.

Part-time and temporary workers are in; full-time workers with benefits are out.

And then there's the ominous trend of sending higher-skilled jobs overseas to low-wage places like India and China, an upscale reprise of the sweatshop phenomenon that erased so many U.S. manufacturing jobs over the past quarter century.

Working Americans need jobs just to survive.

But the Bush administration equates the national interest with corporate interests, and in that equation workers can only lose.

There are ways to spark the creation of good jobs on a large scale in the U.S. (I will explore some of them in a future column.)

But that would require vision, a long-term financial investment and, most important, a commitment at the federal level to the idea that it is truly in the nation's interest to keep as many Americans as possible gainfully employed.

288. "Mission Accomplished" At least 11 People Killed by Truck Bomb in Baghdad

Newsgroup: rec.radio.scanner
Date: 2003-08-08 18:46:26 UTC
From: Sidewinder@DUHBYA.sucks
Message-ID: <8a5f68cd45d68c374dcea6214f0e8bf6@remailer.frell.eu.org>
Source record: 27390
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner,rec.radio.shortwave

Jordan's Iraq embassy attacked
At least 11 people have been killed by a truck bomb outside the Jordanian embassy in Baghdad.
Some of those killed are thought to have been in cars parked close to the embassy.

The Jordanian Information Minister, Nabil al-Sharif, called the attack - in which the bomb appears to have been concealed inside a minibus or sports utility vehicle - a "cowardly terrorist" act.

In a separate incident on Thursday an American forces Humvee vehicle was blown up by what was reported to be a rocket-propelled grenade.

A firefight broke out between US troops and unknown attackers and one injured American soldier was seen being carried from the scene.

On Wednesday two American soldiers died in a firefight in the al-Rashid district of Baghdad.

In Washington, Secretary of State Colin Powell admitted US troops still had much to do bring the situation under control in Baghdad and blamed Iraqi fighters loyal to ousted leader Saddam Hussein and "some from the outside" for the unrest.

'Very hard'

The attack on the Jordanian embassy reduced the front of the building to rubble and shrapnel was found as far as 1,000 metres from the scene and on nearby rooftops. Human remains were visible in a compound close to the embassy.

A Jordanian official said he thought a missile was fired at a car to set off
a load of explosives packed inside.
It is unclear how many people were injured in the blast, with reports suggesting about 50 people were rushed to hospital.

A US army spokesman said 130-230 kilograms (300-500lb) of explosives were probably used in the bomb.

"I saw a long vehicle approach the embassy," police officer Hekmat Ibrahim told the AFP news agency as he was leaving the nearby Iskan children's hospital, his head bandaged.

"I heard a huge explosion. I was blown back and I fell unconscious."

An Iraqi embassy guard being treated at another hospital, Shaheed Mazloum, said he had heard two explosions.

"I was sitting in the reception," he told news agency AP.

"I heard the first explosion. I ran out and then there was another explosion. Many employees were inside the embassy as well as Iraqis and Jordanians. Smoke filled the street," he said.

After the embassy explosion, dozens of angry Iraqis stormed the building, smashing portraits of Jordan's King Abdullah II and his father King Hussein.
The crowd was quickly dispersed by US soldiers and Iraqi police.

No one has claimed responsibility for the attack but an investigation has begun.

Correspondents say the groups responsible for the regular attacks against US
troops in Iraq are almost certainly behind this incident.

Iraqi resentment

In past years Jordan has found itself caught in the middle of Iraq's relations with the West, says our Baghdad correspondent Matthew Price.

Many Iraqis believe Jordan took advantage of tough UN sanctions on Iraq, acquiring cheap oil from the oil-for-food programme, while offering tacit support to Saddam Hussein's regime.

Last week Jordan granted refuge to two of Saddam's daughters and their children. However, it has frequently been reluctant to offer fleeing Iraqis similar sanctuary, Iraqis complain.

Jordan also supported the recent US-led war in Iraq. US troops used Jordanian territory for bases.

Jordan is thus resented both by Iraqis who opposed Saddam's regime and those
who supported it, our correspondent says.

297. Bush Approval Slips to 53% - Fix Economy, Say Voters

Newsgroup: rec.radio.scanner
Date: 2003-08-08 20:43:15 UTC
From: Sidewinder@DUHBYA.sucks
Message-ID: <f15ba97f386ff15f542d46f76ee667db@remailer.frell.eu.org>
Source record: 27299
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner,rec.radio.shortwave

Released: August 7, 2003

War Bounce Smaller Than for Bush Sr.

A 53% majority approves of the job George W. Bush is doing as president while 37% disapprove.

That is the highest negative rating the president has received since taking office.

After reaching a peak of 86% just after the Sept. 11, 2001 terrorist attacks, the president's approval rating declined through much of 2002 and early 2003, before rallying to 74% during the war in Iraq.

This spike was shorter in duration and smaller in size than the one experienced by Bush's father, former President George H. W. Bush, after the 1991 Persian Gulf War.

Prior to the start of the war in December 1990, Bush Sr. was at 61% in the polls, and rose to a peak of 86% after the conclusion of hostilities.

His approval rating fell afterwards, but did not reach prewar levels until November of 1991.

By contrast, George W. Bush was at 55% in mid-March and rose to 74% approval around the time of the fall of Baghdad in early April.

He has now fallen back to prewar levels, five months later.

Republicans remain steadfast in their support of the president, with 91% approving of his performance and only 6% disapproving.

But ratings among both Democrats and independents have continued their downward slide.

Just 30% of Democrats say they approve of the president's performance, the lowest level since before Sept. 11, 2001.

Independents are more positive than Democrats, but they are closer in their views to the Democrats than to Republicans.

Just under half of independents now approve (48%), which also is their lowest level in the post-9/11 period.

As recently as June, nearly six-in-ten independents (59%) approved of the Bush's job performance.

The president's approval ratings showed no significant uptick as a result of the U.S. military raid in Iraq in which Saddam Hussein's sons, Uday and Qusay, were killed.

Along with increasing disapproval of his job performance, the president is facing a public expressing a growing degree of dissatisfaction with the way things are going in the country.

The poll finds 53% dissatisfied with the state of the nation, while 40% are satisfied.

The 40% satisfaction essentially matches the low points in the national mood experienced just prior to Sept. 11, 2001 and again in September 2002.

There is a strong partisan tilt to these results; 64% of Republicans are satisfied with the way things are going, compared with only 25% of Democrats.

More Want Greater Focus on Economy

The survey also finds a dramatic increase in the percentage of the public who say that it is more important for Bush to focus on the economy rather than on the war on terrorism.

Growth in the importance of the economy in the public's mind has occurred across the political and economic spectrum.

More than two-thirds of blacks (69%) rate the economy a more important presidential priority than terrorism compared with 55% of whites.

But concern among both groups grew by nearly 20 points since January.

Similarly, more Republicans and Democrats say Bush should focus more attention on the economy than did so in January, but large partisan differences persist.

Republicans are divided on the question (43% say it is more important for the president to focus on the economy, 40% say war on terrorism) while Democrats overwhelmingly say the economy should be the focus (70% economy/ 18% war on terrorism).

Opinion that the president should focus on the economy grew 28 points among young people (age 18-29); they are now the age group with the greatest concern about the economy.

Bush's Lead Slips

A plurality of registered voters say they would like to see the president reelected in 2004, but his advantage over a hypothetical Democrat is declining.

In the current poll, 43% say they prefer Bush compared with 38% who prefer a Democrat.

Bush led by 47%-37% in a poll taken last month.

In April, just after the fall of Baghdad, Bush's lead stood at 14 points (48%-34%).

Bush is still doing better among Republicans than the hypothetical Democrat is doing among Democrats, but there is evidence that Democratic voters - and traditional Democrat-leaning demographic groups - are coming home.

In addition, the president has lost ground among independents, who are now divided between Bush and a Democratic candidate (34% for Bush, 33% for a Democrat).

Women, especially older women, liberals and middle- and low-income Americans have moved away from Bush.

In April there was no gender gap in preferences for 2004, with men favoring Bush by 48% to 35% and women favoring him 48% to 34%.

Today, the preferences of men are nearly unchanged (49% Bush, 32% a Democrat), while a plurality of women now support a Democrat (44% Democrat vs. 37% Bush).

Much of the shift has come from women age 50 and older.

In April, a 52% majority of women age 50 and older favored Bush's reelection.

In the current survey, only about a third (35%) support his reelection while 45% prefer a Democrat.

Similarly, the economic gap in presidential preferences is now much wider than in April.

A solid majority (55%) of voters with annual family incomes of greater than $50,000 continue to support Bush's reelection.

That compares with only about a third (34%) of voters with annual household incomes of less than $50,000.

In April, a 46% plurality of this group backed Bush's reelection; today, a comparable plurality (45%) backs the Democrat.

Iraq: Growing Pessimism

Faced with a steady stream of reports of American casualties in Iraq, an increasing percentage of the public thinks the military effort is not going well.

The belief that the U.S. made a mistake in launching the war also has grown, though much more slowly.

More than a third of the public (35%) now believes the military effort is going "not too well" (24%) or "not at all well" (11%).

This total is up 14 points from a survey conducted June 19-July 2 (21%).

Currently, only 19% say the war is going "very well," though 43% say it is going "fairly well."

But a large majority of the public continues to regard the decision to go to war as a sound one.

By more than two-to-one (63% to 30%), respondents say that using military force in Iraq was the right decision.

The number who say that the war was the wrong decision has risen six points since the early July survey (from 24% to 30%).

Republicans continue to believe that the war was the right thing to do; 90% still feel that way, compared with 93% in late April.

But many more Democrats and independents express reservations about the war.

After the fall of Baghdad in April, a majority of Democrats (59%) felt that the war was the right decision; now just 46% feel this way.

A majority of independents continue to say the U.S. did the right thing (61%), but this is down 12 points since April, when 73% felt this way.

The current survey was underway when American military forces killed Saddam Hussein's sons on July 22; respondents interviewed after this event were somewhat more positive about the progress of the war: prior to the event, 36% said the war is not going well, compared with 31% who felt this way after the news reports about it.

Attitudes about the wisdom of the decision to go to war were unaffected by the killing of the Hussein sons.

'We don't feel like heroes anymore'

08/05/03

Isaac Kindblade

I am a private first class in the Army's 671st Engineer Company out of Portland. I just wanted to let you know a little bit of what we are up to, maybe so that you can have another opinion of what's going on over here in Iraq.

We have been in country since Feb. 14 and were a part of the Third Infantry Division's march into Baghdad. In fact, as a result of some serious miscommunications, we were the front line of the charge on two very distinct
occasions.

We haven't been a huge part of the war. We are bridge builders, and we were here in the event that the Iraqis blew up the bridges on their retreat. They
didn't, so we didn't have to do much.

We were scheduled for 13 missions at the start of the war. We did three or four bridge-related missions. We fill in where we are needed, whether it be guarding enemy prisoners of war, operating traffic control points, patrols on the Tigris River or guard duty of police stations. Our primary mission at
this point is transportation, because we happen to drive very large trucks.

A lot is being said about poor morale. That seems to be the case all over the place. It's hot, we've been here for a long time, it's dangerous, we haven't had any real down time in months and we don't know when we're going home.

I think a big aspect has been the people here. When the war had just ended, we were the liberators, and all the people loved us. Convoys were like one long parade. Somewhere down the line, we became an occupation force in their
eyes. We don't feel like heroes anymore.

We are doing the best we can, trying to get this place back on its feet so we can go home -- making friends with the locals and trying to enforce peace
and stability.

A lot is made of our military's might. Our Abrams tanks, our Apache helicopters, computers, satellites, this and that. All that stuff is great, but it's essentially useless in peacekeeping ops. It is up to the soldiers on the ground armed with M-16s and a precious few words of Arabic.

The task is daunting, and the conditions are frightening. We can't help but think of "Black Hawk Down" when we're in Baghdad surrounded by swarms of people. Soldiers are being attacked, injured and killed every day. The rules
of engagement are crippling. We are outnumbered. We are exhausted. We are in
over our heads.

The president says, "Bring 'em on." The generals say we don't need more troops. Well, they're not over here.

It would take a group of supermen to do what's been asked of us. Maybe people back home think we are. Hell, maybe we are. I'm 20, and I can't help but think that serving in a war is a rite of passage, earning my generation a place in the history books.

I'm honored to be over here, and I realize that this is the experience of a lifetime. All the same, we are ready to come home. Pfc. Isaac Kindblade of Cornelius enlisted in the Army at age 17 before his graduation from Valley Catholic High School in Beaverton.

LOL. "Released", he says. Yet he provides NO cite for the poll, like who conducted it. Nor does he provide a link. You really should do those two things in the future. Otherwise, you look like a dumb Algore voter. Did you know Al won the high school dropout vote convincingly in 2000?

> A 53% majority approves of the job George W. Bush is doing as
> president while 37% disapprove.

Ahh, OK. This is the PEW poll. Sorry to say, this is NOT the most RECENT poll. That would be the new Gallup Poll, done August 6-8, which has him at 60%-up 2 from their previous. The most recent Fox News Poll (and before you start with the "Faux News" bullshit, need I remind you that FNC routinely had Bill Clinton's job approval HIGHER than Gallup) had him at 59% on July 28-29. NBC had him at 56% as of the same date, Newsweek had him at 57%, and even French pollsters Ipsos-Reid, who historically poll at least 5 points below all the others, had him at 54.

http://www.pollingreport.com/BushJob.htm

In addition, normally the public opinion polls are done over a 2 or 3 day period. ALL of the ones in the url above, with the exception of Pew, were in fact conducted over 2 to 3 day periods.

But this Pew poll was done over a period of 3 WEEKS (July 14 to August 5th). Different methodology equals different results. A poll is supposed to be a "snapshot in time", but Pew obviously decided the results they were getting weren't what they wanted them to be, so they extended the time span of their polling until they got the results they wanted. Shame on them, they used to be one of the better polling outlets out there.

"You can change the outcome of any election you want" -Bill Clinton

Message-ID: <vKUYa.7475$qf.6051@lakeread06>
Source record: 27305

Would anyone know the output voltage of T13, the inverter transformer for the luminescent display. My display went very dim, I have a voltage of approx. 35 vac. I was wondering if my display or the inverter went bad. All Electronics sell a 5" x 1" luminescent strip for under 10 bux, but runs off of 120 vac. Not a problem, I can tap into the 120 vac before the xformer and using a relay I would be able to switch it on and off via the on/off switch. plenty of room in the case for this setup.

thanks,
Bill

Source record: 27306

Yeah, you got to love the programming of the 785d... I beat my head against the wall quite a few hours before I figured it all out. Now it seems second nature...

The manual is just ok at best.

First off, make a choice... are you really a serious scanner surf type, or do you want to program it once and forget about any changes... ie a user.

If you plan to do any surfing, I might suggest you consider the Scancat Program. I saw it demo'd at the Dayton Hamvention and bought a copy on the spot, it's well worth the $99 price tag.. especially if you get the "magic" program with it. Magic will convert ordinary text files to scanner data base type files used by various program. Works killer..!

Anyway, back to the 785d

You probably need to add some communication delay to the rs-232 line as the default is probably too fast for the hand shaking. Before you open the communications to the scanner, add some handshaking delay to the serial connection.

The default baud rate is 9600 although it can be stepped up. The initial setup can be a headache. Once reliable communications is working, you can step up (in software) to 19kb serial.

You of course need to know what type of trunking format you plan to listen to, program the "home", "data" or "control" channel as the lowest number in the trunking list.

No need to pay, just add some serial communication delay and you're gonna be set. Then back to the manual to figure it all out.

Wow, thanks for pointing them out. I have 2 of the older ScanTennas from AntennaWarehouse. Yes I agree there was room for machanical improvement however electrically these are without question the best non-directional antenna ever made. BTW I've had one outside (older, machanically weaker version) for 2 1/2 years. Still zero damage and its seen several Tropical storms and survived winds of 60 KTS. I live 4 miles from the Atlantic Ocean and no salt damage/rust to speak of...

They seem to go bad as much from UV making the plastic brittle as they
do from weather. One of mine lasted an amazingly short time, less than
one summer, another one lasted almost 5 before losing a couple of
"legs" suddenly.

I'm going to order two, one for the attic as a backup antenna, and one
for the tower. Now I gotta find a monkey to climb it.

The EL transsformer voltage is not shown in the service manual.

I recall the AC voltage being over 100 VAC to power the EL panel
when I measured it a long time ago.

If you are getting less than 100 VAC, I would check the capacitors
in the inverter circuit before replacing the EL panel.

I mounted a small toggle switch on the back of my PRO-2022
which turns off the display backlight by interrupting the DC voltage
to the inverter. I run PRO-2022 for 24 hrs/day and leave
the backlight off. It has been powered on continuously for
many years now and the backlight is as bright as a new one
when I switch it on.

If you watch you can get ones in mint condition on eBay. Granted some are going for a very high price but an equal amount are going very cheap. I recently bought two, one for $249 + 10 s/h and one for $223 + 15 s/h. Both were in perfect condition.

I don't have a Pro-2022, but I do have a Pro-2006
which uses an EL panel.

The service manual for the Pro-2006 states that the
EL panel is driven with 70Vrms @ 300Hz.

This might get you in the ballpark.

Despair of the Jobless
By BOB HERBERT

The folks who put the voodoo back in economics keep telling us that prosperity is just around the corner. For the unemployed, that would mean more jobs. Are there more jobs just around the corner?

This alleged economic upturn is not just a jobless recovery, it's a job loss
recovery. The hemorrhaging of jobs in the aftermath of the recent "mild" recession is like nothing the U.S. has seen in more than half a century. Millions continue to look desperately for work, and millions more have given
up in despair.

The stories have been rolling in for some time about the stresses and misfortunes that are inevitably associated with long-term joblessness: the bankruptcies, foreclosures and evictions, the dreams deferred, the mental difficulties - anxiety, depression - the excessive drinking and abuse of drugs, the family violence. There are few things more miserable than to need
a job and be unable to find one.

How bad is it? The Economic Policy Institute in Washington reported last week that "since the business cycle expansion began in November 2001, payrolls have contracted by 1 million (1.2 million in the private sector), making this the weakest recovery in terms of employment since the [Bureau of
Labor Statistics] began tracking monthly data in 1939."

John A. Challenger, who runs the outplacement firm Challenger, Gray & Christmas, said it is taking an average of 20 weeks for job seekers to find employment, and many are unable to match their previous salary. "Employers have all the cards," he said. "Not only are they sharpening their salary pencils, but the screening of candidates is probably the toughest it has ever been."

The official jobless rate, now 6.2 percent, does not come close to reflecting how grim the employment situation really is. The official rate refers only to those actively seeking work. It does not count the "discouraged" workers, who have looked for jobs within the last 12 months but have given up because of the lack of offers. Then there are the involuntary part-timers, who would like full-time jobs but cannot find them.

And there are people who have had to settle for jobs that pay significantly less than jobs they once held.

When you combine the unemployed and the underemployed, you are talking about
a percentage of the work force that is in double digits. That's an awful lot
of lost purchasing power for a society that needs broad-based wage growth among its consumers to remain economically viable. Most Americans depend on their paychecks to get from one week to the next. If you cut off that paycheck, everything tends to go haywire.

Right now there is no plan, no strategy for turning this employment crisis around. There is not even a sense of urgency. At the end of July the Bush administration sent its secretaries of commerce, labor and treasury on a bus
tour of Wisconsin and Minnesota to tell workers that better days are coming.
But they offered no real remedies, and the president himself went on a monthlong vacation.

The simple truth is that the interests of the Bush administration's primary constituency, corporate America, do not coincide with the fundamental interests of workaday Americans. On the business side of this divide, increased profits are realized by showing the door to as many workers as possible, and squeezing the remainder to the bursting point. Productivity (based primarily on improvements in technology) is way up. Hiring, of course, is down. Part-time and temporary workers are in; full-time workers with benefits are out.

And then there's the ominous trend of sending higher-skilled jobs overseas to low-wage places like India and China, an upscale reprise of the sweatshop
phenomenon that erased so many U.S. manufacturing jobs over the past quarter
century.

Working Americans need jobs just to survive. But the Bush administration equates the national interest with corporate interests, and in that equation
workers can only lose.

There are ways to spark the creation of good jobs on a large scale in the U.S. (I will explore some of them in a future column.) But that would require vision, a long-term financial investment and, most important, a commitment at the federal level to the idea that it is truly in the nation's
interest to keep as many Americans as possible gainfully employed.

I paid $249 for my Uniden BC780XLT at the Uniden store:

http://www.uniden.com/docs/store/itemlist.cfm?cattype=prd&prodcatselect=3

They call them referbished but mine was for all appearances brand new,
in fact thats what they tell you. I just checked and they are back
ordered but if you place your name on the waiting list it will come up
before you know it, just hold your horses for a while. You can continue
to check you status in line anytime you want.

Good luck
Dale, K9VUJ

Seems that the warranty is only 90 days. I think I'd rather buy a new one
with a year warranty.

I listen to the NOAA weather stations alot, as well as the VHF marine band. Last week I heard the US Coast Guard make an announcement on ch. 16 that several flares were seen as well as a life preserver found floating in the water 20 miles off the Chicago shore in Lake Michigan. Unfortunately, I was driving inland at the time, and never did find out what became of that. I also heard a sail boat call Mayday as they ran aground on a sand bar. I hear a lot of fishing boats on Lake Michigan as well as the big ocean going vessels that come into port. Besides local police, other interesting listening can be found on the local busses (metro and school busses). In the winter I listen to the snow plows and the AAA auto club. They have two transmitters in town. These are very busy during snow storms. Taxi cabs can be neat to listen to at times. The air band in cool. Plug in a few ' ops ' frequencies like 123.45 and you may find several pilots chatting to each other as they fly across the country ... sometimes in Russian or French ! Check out the ham radio band. There is new technology called IRLP in which the ham radio repeater is connected to the internet ... I've heard hams driving home from work in their car from Australia talking to local hams, or hams in London chatting as they sit in their basement radio rooms.

If you search carefully, you may find the DEA following known drug dealers around town ... even placing bugs on the cars and announcing exactly where they are on the map as they tail them !!! (you didn't hear this from me though ... just what I've been told ... or did I actually hear it????)

On the old cordless phone band, I've heard a neighbor chatting with his girlfriend while his wife was away at work (they've since moved).

I work in the medical field, and my favorite thing to listen to are the ambulances and Flight for Life helicopters. I've heard several calls where the EMT's have been defibrillating people while on the radio with the doctor at the hospital.

LOTS of good stuff out there.

Good listening !

I was just listening to 123.45 and heard an aircraft announce that he was 11,000 feet over the field and jumpers were away. This at 10:08 EST.

Yes John we did try that and this is what we found
http://webpages.charter.net/moment/scancontrol.htm
It didn't really work, i.e. it only found 1 bank on a scanner with 4 full banks of info. It thought our BC785D was a BC245XLT and didn't get anything on any of the banks. They have no street address and they want you to buy there software via PayPal, they also have no phone number.... Rule of thumb when doing business on the internet, "no street address no phone number just say no to giving them your money!"

Congrats on killing another one of the troll's abuse channels. Now
that he's been blocked by the Frog remailer and by Cotse, things are
slowly getting tougher for him. It's like slowly choking off a
terrorist network; it takes time and patience. His Altopia channel
should be next.

Actually this one is beyond a troll. Excessive morphing and posting
substantively identical articles. Granted each one is a news story, but
the articles contain only text from news stories and if the user wants
that posted he should post it as links all in a single post rather than
as 20 separate posts each just containing a news story. It's a slightly

gray issue of BI, but we decided that it was abusive if continued and because it is gray warned our user first.

/steve

$275.00 will buy me a new scanner, so why would I want to give you $280.00
for your used one??? I just bought another BC780XLT for $275.00 form:
http://www.rcelectronics.net/
Then theirs the rebuilt right from Uniden for $249.00
http://www.uniden.com/docs/store/itemdetail.cfm?item=BC780XLT
BC780XLT - "500 Channel, Continuous Band Programmable Scanning Radio with
TrunkTracker III"
This item is in "Like-New" condition. "Like-New" units have been returned,
repaired, and reconditioned. These products are inspected and serviced if
necessary and are certified to work to the products original
specifications.

So lots a luck trying to get $280.00 for your used unit.

It's junk don't bother with it. We could not get the junk to work, i.e. it keeps shuting banks 1 and 2 off, puts them in the skip mode.. It would not find our BC785D at all, it keeps saying it's a BC245XLT. It will not import the info from the TrunkStar780 data file or the Arc780 data file for frequencies. It only works in the c:\program files\ScanControl dir of you install it anywhere eles it does not work, that sucks big time!! So we did what we do with all junk, i.e. put it in the C File :-)

Her "cover" must have not been too good if everyone in the Executive
Branch knew who she was. If the mission was properly
"compartmentalized" then no one would know who she was except the
people who needed to know. Senior White House Officials don't need to
know the names of spies. They just need the information collected.
Either Wilson and Valerie Plame are outrageously incompetent or this
is yet another internet conspiracy theory.

They solved the problem you was having with it not loading banks 1 and
2. As far as bank 4 goes, the demo you tried will only load the first 3
banks. I am working with them now to solve the problem it is having with
downloading the ID's. Check your baud rate setting in the program to see
if it is set right for your 785. I havent had any probelms with it
detecting any of my radios.

I would agree with you, Dwight, if Saddam hadn't invaded Kuwait. When
they did and the USA helped Kuwait repel them, Iraq signed a surrender
treaty to end hostilities. The treaty required that Iraq get rid of
all the existing WMD and also to allow the UN inspectors to witness
it.

Non of the above events are a fabrication of the United States
Government.

Iraq agreed to these terms at first and then reneged. They harassed
the inspectors constantly and even kicked them out. It wasn't till
after 9/11 and under threat of invasion that President Bush got the
inspectors back in. If Saddam had no WMD's then why did he resist the
inspectors so much? Are you aware that one of the Chinese members of
the inspection team was actually killed in Iraq? considering how easy
it is to bury the weapons out in the dessert until they are needed for

use I tend to believe President Bush has a greater preponderance of evidence eventhough some of it might be weak and from unreliable sources. I am willing to give the US military more time before calling them liars. Afterall, isn't that what people were screaming before the invasion: Give the inspectors more time!

I disagree with you on this detail of Iraq WMDs but I agree with you on the general concern that the USA, being the only "big kid on the block", is at risk of becoming a bully. That is a significant concern. However I don't think its happened yet.

I don't buy the weapons buried in the desert nonsense. It seems to me that would be very difficult to do considering the level of surveillance focused on Iraq over the last decade or so - difficult to do without detection by spies, informants, satellites, or reconnaissance aircraft.

As for the time argument, they've already had several months to search. On top of that, you have to add in the time used by the weapons inspectors prior to the war (both were looking for WMD). The weapons inspectors were not able to find such weapons in the months leading up to the war and the military has not been able to find such weapons in the months since the war. Given all that, how much longer must we wait before we accept the notion that there were no weapons of mass destruction in Iraq in the months leading up to this war?

I would like some opinions from you experiencd folks as to an idea I have for putting up an antenna mast.

My fathers own an electrical supply warehouse so I have access to steel conduit at cost. Many years ago we used 4" conduit and elbows to build a basketball backboard pole in my folks' back yard, and the thing has stood the test of time, weather, and a generation of kids hanging from it.

I have a similar idea for an antenna mount.

I would like to dig a hole on the side of my house, approximetely 24" deep and 12" square. I'd like to take 12 2" conduit couples and weld them into a sheath, and then put this sheath in the hole, filling it (the hole) with cement. So I'd have a big cement block in the ground with a hollow tube in the middle. I would then take three 10' lengths of 2" conduit and weld them together using couples, and place the resulting pole into the hollow sheath in the cement. I would then use a pipe fastener strap to fasten the pole to the awning of the house, approximately 9' up from the ground. I'd pound a couple of copper lightning rods into the ground several meters away, and ground the pole to these rods with large-guage copper wire.

So I'd have a grounded 28' pole above ground, anchored in a 24" deep steel sheath in the ground, and anchored at 9' to the side of the house with steel and bolts. So I'd have 21' of 2" steel conduit sitting in the air unsupported.

I would then build some antenna mounts out of 1" conduit (something that would look like those little plastic tables that the use to keep the cardboard off of pizzas in their delivery boxes). I would of course then affix antennas to these mounts.

Does this idea have any merit? Is 2" steel conduit rigid enough to support weight at 28' above ground? Should I go to 3" pipe instead? The more I sit here and think about it, the more I think 2" just won't be thick enough to stay rigid in high wind.

I live in southeastern Arizona, and the winds here to get a little high. But my major concern would be lightning. Also, at some point we will be moving, and I'd like to just be able to take the pole, remove it from its sheath, and simply have to dig and pour at the new house.

Thanks for any comments or suggestions.

Are you in the US? If so, it is still possible to listen in on police, fire, ambulance, and other public service agencies. In most areas, you'll need a trunk tracking scanner with 800MHz coverage to do so, but you can still hear some police activity in smaller towns using a conventional scanner (especially one with 800MHz coverage). In the largest cities, watch for movement towards digital (requiring the very latest scanners with that capability).

In addition to police, fire, and such, there are a wide range of other radio activities to listen to - local sports events, businesses, airports and aircraft (military or civilian), boats (marine), ham radio, baby monitors, cordless phones, and so on. Once you get your scanner, you'll have to scan around to see what you can find in your area.

By the way, may I recommend you drop the "Saboteur" from your sender line. Saboteurs are not very popular in this country at the moment.

support
> weight at 28' above ground?

I have three sections of 10' mast up, supporting a discone; it's
scary to watch it sway around in a high wind, but it's held up. It's not
conduit, though. My brain is trying to tell me that conduit won't take the
necessary flexing....you might want to look into that.

Ummm, The best thing I used was a 21' top rail for chainlink fencing.
No welding the sections together and you get 2. They fit together like
standard antenna mast. this way with 2 feet in ground, you will have
40' over mast. Get some good guy wire and guy down 8' from the tip of
the mast and then mount your pizza box above the guy wire coupling.
this way one of the antennas can still go at the tip of the mast.

It just seems easier and simpler than messing around with 3" conduit
and welding with couplings and all that, especially if you are getting
a new house soon. but I still like and understand the idea of the
pizza box thing.

I agree that filtering does work, but I too have a complaint. Not long ago, a gentleman was in here asking a "radio" related question. Although it was not "Scanner" related, he was more or less chewed out for being off topic. Maybe he was as far as TYPE of radio, but POLITICS as I've seen them in here is NOTHING to do with radio... SO I ASK.... WHERE are the NET GODS who chew others out, why are they not condemning this??????? If anything is off topic, THIS CRAP IS. JMS....

Hmmm... Good idea for the mast material, but the guy wires are out (not a lot of land back here at the corner of the lot where the house is). I may look into the fencing thing. Thanks.

What's going to happen when my tower is struck by lightning? If its proprely grounded, do I have to worry about the bolt lighting my house on fire, blowing up my scanners and radios with me in front of them, etc?

360. BC780XLT vs. PRO-2006

From: Burr <pitzpho@earthlink.net>
Message-ID: <3F35BFF9.40209@earthlink.net>
Source record: 27211

Evening,
I wrote a new program for the Inland Empire east of LA using the Winscan 2.10. I have all the Railroads, CHiPs and local fire, some of the PD's that are not "trunked" and most of the aircraft freq.'s plus the "High Desert" freg's so I can listen on my way to and from home.

I'm happy with the way it is working right now and as I find more freq.'s I'll add them. I picked up most of the major stuff as I came from Kern County to this area.

I used my Magnet Mount on my pickup and am using the "rubber ducky" in my travel trailer right now. I'll bring a Scantanna down with me next week and things should work a lot better.

I also have a AN-1 Sony for my YB400 that I use down here. I have everything running off the 12v battery to cut down on noise.

You can attach the guy wires to your house. I would not go that for up
and put an antenna on it without any guy wires.

Well, guess I just wrote a Winscan frequency file and am
running it both as stan alone in the BC 245 and with my PC
Laptop as a monitor of what's happening.
Are you the person that loves Winscan so mush, got it all
figured out and running it everyday. It sure is a nice
program and it runs real well, I just love running it!!

Something is a little wrong here. I am running five programs
right now and they are all running very fast and I have no
crashes. Also I have had email support from Winscan and I
also could have called if needed, I sent you their phone
number last year so what you say most of the time is a lot
of bull from someone who can't manage a program on an old
computer that is setup wrong or is just so messed up it
won't run!

Maybe you should think and about a new computer (386 went out
years ago) and then learn how to use this an other programs.

Maybe you could also learn how to type your email address so
people can write or reply to you.

My Athlon XP Barton 3000 with 2 gig of ram is far from a 386. Its not
like winscam is hard to use. Hell you must have figured it out so it has
to be easy.

> Maybe you could also learn how to type your email address so
> people can write or reply to you.

I dont care to have morons like you sending me email.

Anyway, what the hell is your problem? Do you really care if I and most
people dont like a program that you use? Or is it the fact that you said
you wrote a new program when in fact you just made a frequency file(big
deal people do it every day). I love a good flame war so I'll keep on
going if you want.

I agree Burr. I've had nothing but good luck with Winscan. I don't think I have ever had it crash and as far as processor usage, right now I've got Outlook Express and Winscan open and I'm only using 28% of my CPU. I have to say that I think it also really adds to the enjoyment of scanning.

You're not missing anything. Granted the PRO-2006 is probably the worlds most famous scanner. In its time (over a decade ago) it was state of the art. Today the only reason they're going for outragous prices on eBay is simply because they can be modified for Cell Phones.

I have a PRO-2006, actually I had 2 but sold one, I couldn't resist the $150 profit! I have 7 BC780's. The 780's have FAR better intermod rejection and selectivity. Sensitivity is nearly the same. The PRO-2006 is a very sensitive radio however intermodes can be a problem.

The PRO-2006 is very slow at scanning and searching when compared to the 780. Also I VERY useful feature of the 780 is during searches you can lockout freqs which cause birdies, intermod or you already know of. Very useful if you want to scan a large range and don't want to have to hit the "search" button everytime the scanner comes back to that frequency and stops. The PRO-2006 does not have tha feature and since I do a lot of military searching that is a huge plus for me!

The PRO-2006 deserves its place in the Scanner Hall of Fame, its a classic but that's all.... I feel the BC 780XLT is today what the PRO-2006 was of 10 years ago. But what is really sad is that most people won't agree with me simply because the 780 can't nor ever will receive cell phones....I never seen the big excitement about cell phone reception anyway....

That's a personal opinion. For me the answer would be no. But that's because if mine ever got damaged its VERY easy for me to take mine down and replace it. If your's is mounted on a tower that doesn't fold down and/or is hard to get to if it needs replaced then I would say yes...

Hi,

I just bought myself my first scanner a GRE PSR-282

I have entered various frequency's from the net.

On one frequency in particular, there is alot of activity and although it seems to come through really clear in some respects, like it feels like a strong signal with no background noise etc, the voice is distorted and i have to turn it up really loud to hear her.

It reminds me of 'bleed over' from another channel from when I had my CB radio as a kid.

Is there anything I can do to rectify this?

Outgoing mail is certified Virus Free.
Checked by AVG anti-virus system (http://www.grisoft.com).

Dwayne,
Why don't you just say "I don't like Winscan" and let it go
at that!! Why bad mouth someone's stuff just because you are
having bad luck with it.
Some people like it and some don't.

Yes, I did send you their new number where they moved last
year and they posted right here on this news group about
their programs.

Now lets let it rest, maybe we'll both re-think our words.

You may be right, but it still doesn't justify chewing out someone for
asking a "radio" related question even if it isn't "scanner". I can
understand an accidental cross post, I've been guilty of that myself, not
even realizing it, but this seems more deliberate. Daily barrages of
multiple listings. A good while ago I used to come in here and all you seen
were arguments between a few people day in and day out. All of that seems to
have cleared up to allow scanner or other radio related talk here - now only
to give way to a political forum. As I said once before, IF it was a
political forum as to whether or not scanners were allowed in vehicles in
certain or all states, and similar issues, at least THAT would be on topic.
I guess all I'm saying is if the Net Gods are going to chew anyone out for
anything, then use equal justice or none at all. JMS

It may be a signal in a different mode than what your scanner is trying to decode. In other words, if your scanner is set to NFM (narrow FM) and the signal is WFM (wide FM) or AM, it might sound as you describe. What frequency is it? That might help answer the question. Another possibility is that you are getting some kind of intermodulation distortion or image. Hard to say exactly without hearing it.

I agree I'm the same as my antennas are very easy to get to to work on them. Also here in Florida I don't have the problems with cold weather, ice storms and wind blowing cold ice covered elements not to mention making the plastic more likely to break. If I lived up north then I would have a different opinion....

Excuses me but I think you may be confused? I got my New Scantenna at
http://www.antennawarehouse.com for $44.00 S&H included. The least
I've ever seen a older one for was $40.00 S&H included. Are you
saying you know were you can get a old one for $24.00 S&H included?

PS. The insulators of the new ones are thicker and heavier duty than
the old ones had and they are made from a UV resistant material.

If you clicked the link, i.e.
http://webpages.charter.net/moment/scancontrol.htm
you would see the screen snapshot of it showing the baud rate and also showing no banks 1 or 2, They go on and on about a monitor but we could not find it any where on the demo we downloaded on August 2, 2003 and tested for this last week. A really big problem with it is you can't install it on the D:\ drive. I don't want scanner programs running on my C:\ drive I want them in D:\Scanner\Software but when we did that it would not even start, i.e. we got errors stating it could not find a .dll file. All in all ARC780 or TrunkStar780 are both 10,000% better programs. and for the BC780XLT the little ScanPro 780 program from BlackBag does it just fine, and if you don't want to spen a dime go get Java780 at http://www.qsl.net/ke9zm/java780/java780.html It works it's free what more could you ask for :-)

If you don't have a Pro-2006 don't bother geting one, the only thing they where good for was a cellphone mod, but with most cellphones now digital and using a split band, i.e. 800MHz trans, 1.6GHz rece and digital the Pro-2006 is not worth spending any cash on. I have both and the 780XLT is on 80% more then the 2006

I agree with you on Trunkstar780 and ARC780. I use Trunkstar780 for all
my logging and ARC780 for editing. I find java780 to be a silly little
program because it don't allow you to edit anything. ScanPro is the only
program I don't have for the 780 so I cant say anything about it. You
forgot to mention Andy's 780 programmer which is a very good and free
program. If you never heard of it then you can get it here
http://www.angelfire.com/electronic/andysprogram/download.html The only
thing about Andy's program is that you have to have excel in order to
use it. I don't know why your having the problems you are with the 785
and ScanControl but I know they are working out all the bugs. Give it a
couple weeks and maybe try it again. Who knows you might like it when it
works.

Really?? Only 28% of your CPU?? Huuummm
http://webpages.charter.net/moment/1winscan780.htm
Even they, i.e. Pozilla state it has a problem using all your CPU and they are trying to bring it down to 40% or 50% but it will not do real time moniting and not use 100% of your CPU at this time, that is if you can get it to run at all.

Could also be your antenna, that little rubber ducky is not the best antenna in the world. Heck it could be a 1000 things, start with the cheapest and setup an outside antenna for it see if that clears things up for you. Or just walk outside and hold it up, if it clears up you need a bigger antenna then that little rubber ducky :-)

Hey guys and dolls. I'm seriously considering buying myself a Yupiteru MVT-7100, a Canadian continuous coverage model. Anyone here have one of these? Is it as awesome as advertised?
If I do get this scanner, this means that I'll have to sell one I already have - a Yaesu VR-500. This is a great little scanner that I am very fond of. Would I regret losing it to gain the Yupi?
Thanks for any help you can give me!
UJ

Voices of Freedom: 100 Liberation Quotes:

"I can honestly say now that I'm proud to be an Iraqi. Because of what
has happened, because there is freedom here like I have not known
before. Now I can talk-to you, to people I could never talk to before.
I am a simple man. I am just a worker. But even these simple
things-talking-give me hope."
Khalid Nemah, an Iraqi taxi driver, Chicago Tribune, 8/05/03

"Iraqis are very thirsty to learn what is happening outside of Iraq."
Abbas Darwish, owner of a Baghdad shop that sells newspapers, The New
York Times, 8/05/03

"You never knew who was sitting next to you. In the past no one would
dare to just speak out. Now everybody is talking. About federalism,
about a monarchy. ... I think our aims are just one, to eliminate
persecution for anyone ever again."
Jafar Adel Amr, a tool salesman in Iraq, Chicago Tribune, 8/05/03

"Freedom is much sweeter. I can get up in the morning and decide
whether I want to shave or not; if someone in my family is sick, I can
stay home with them. I don't need to ask permission."
Salim Kasim, one of Uday's chief mechanics, Los Angeles Times, 8/02/03

"We didn't believe these things, but we had to say them. Saddam was
there in all the books, even the math books."
Ghada Jassen, a fifth grade teacher in Iraq, Chicago Tribune, 7/31/03

"We don't want patriotic education anymore. Nothing about war. We want
flowers and springtime in the texts, not rifles and tanks."
Dunia Nabel, a teacher in Baghdad, Chicago Tribune, 7/31/03

"We have full freedom to print anything we want. The coalition doesn't
interfere in our work but, of course, we have our own red lines."
Ishtar el Yassiri, editor of the new satirical Iraqi newspaper Habez
Bouz, Financial Times (London), 7/31/03

"It is like the soul coming back to the body."
Ibrahim Abdullah, a refugee returning to Iraq, The Times (London),
7/31/03

"The tension is reducing every day. We are seeing a change. People are starting to realize that the soldiers are not here to occupy Fallujah forever-they're here to help us rebuild."
Taha Bedawi, mayor of Fallujah, The Washington Post, 7/29/03

"It's a chance to defend our country for our people. It's good to work with the American soldiers. They give us new training and a mutual respect."
Omar Abdullah, a recruit for Mosul's newly formed joint security group, Associated Press, 7/29/03

"We're happy, we're rid of Saddam Hussein; the torture and executions of 35 years are over. We should wait to see what the Americans will do."
Ahmed Abdel-Sahib, in Najaf, The Washington Post, 7/28/03

"There is a certain harmony. But you can not rebuild a city or country-a country destroyed by war-in one month."
Mohammed Tahar al-Abid Rabu, a member of the Mosul city council, Agence France Presse, 7/28/03

"For the first time I feel really free."
Latif Yahia, Uday's former double, after hearing of Uday's death, Agence France Presse, 7/26/03

"The Iraqi people have got rid of two of the biggest criminals in history. Their victims and the sons of their victims, who lived for 35 years under oppression, are feeling proud and happy."
Muwaffak al-Rubaiei, a member of the Iraqi Governing Council, Agence France Presse and Reuters, 7/25/03

"We are more free nowadays. My father gave me the full freedom to marry whom I choose."
Raina Nuri, a woman in Baghdad, Christian Science Monitor, 7/25/03

"We felt better after the regime fell, now we are really happy-we have been freed from our nightmare."
Alaa' Kathem, an Iraqi soccer player who had been punished for losing games, Financial Times (London), 7/24/03

"Iraq is now free from torture. Free from Uday."
Amu Baba, a legendary soccer star in Iraq, Los Angeles Times, 7/24/03

"We feel safer now because we used to hear lots of stories about girls. We were so afraid to go out in case Uday saw us."
Farrah, a 15-year-old Iraqi girl, Newsday (New York), 7/24/03

"My father died because of Saddam. I don't want to speak about the reasons. But I was so happy. I was at home when I saw it on the TV. I woke up my aunts and told them the good news. I used to hate those guys so much and so I felt so at ease in my heart."
Osama Zaid, a distant cousin of Uday, after learning of Uday's death, Newsday (New York), 7/24/03

"Even the blind can see what Saddam Hussein did, taking Iraq into so many wars and doing little even for this town, no sports club, no decent hotels."
Wail al-Ali, Tikrit's new mayor, The Guardian, 7/22/03

"We are flying with happiness since Saddam is gone."
Zahar Hassan, in Iraq, Agence France Presse, 7/21/03

"There's more opportunity, more chances to earn money."
Um Khalid, on life in post-Saddam Baghdad, The Christian Science Monitor, 7/21/03

"[Uday] was a bad man, and he used to beat the soccer players if they lost a game. I think he used to treat the lions better than the people."
Mussab Ismas, a 13-year old boy, viewing Uday's lions at the Baghdad zoo, The Washington Post, 7/21/03

"Let the Americans stay, they protect us. I don't see them hurting anyone."
A mother living in Baghdad, The Christian Science Monitor, 7/21/03

"He [Uday] was a sick man, and he kept lions and tigers just to show his manhood, to show everyone that he cared more about animals than people. But he amputated their claws, and he took away their freedom, just like the people."
Alaa Karim, a Baghdad zoo employee, The Washington Post, 7/21/03

"I can see that the American soldiers are free. In our old army, we were always under pressure and strict military orders. There was tough punishment."
Raad Mamoud, a former Iraqi soldier, USA Today, 7/21/03

"I hope Iraq comes back strong. I am in favor of the new government."
Uday Kadhu, a Baghdad car salesman on the Iraqi archery team, Agence France Presse, 7/16/03

"In our opinion, the most significant thing about the formation of the transitional Governing Council is that it includes important personalities that are known to the masses and that represent the different political, national, democratic and progressive forces, as well as independent political organizations and religious denominations."
Iraqi newspaper Al-Manar, 7/15/03

"I felt that we had gone back to the year 1930. I feel that Iraq has started back from zero. We have wasted 75 years waiting to taste freedom."
Hadid al-Gailani, after the Governing Council announced the abolition of Baathist holidays, The Boston Globe, 7/14/03

"I helped deliver thousands of Iraqi babies, and now I am taking part in the birth of a new country and a new rule based on women's rights, humanity, unity and freedom."

Raja Habib al-Khaza'i, the director of an Iraqi maternity hospital and a member of the Governing Council, Associated Press, 7/13/03

"The formation of this council which represents all sectors of Iraqi society is the birth of democracy in the country. It is better than Saddam's government of destruction and dictatorship."
Razzak Abdul-Zahra, a 35-year-old engineer in Baghad, Associated Press, 7/13/03

"The establishment of this council represents the Iraqi national will after the collapse of the dictatorial regime."
Muhammad Bahr al-Ulum, a Shiite cleric on the Governing Council, Associated Press, 7/13/03

"It's a hard situation. But now that Saddam has fallen, it's OK. We can wait for the future now."
Muhammed Abdul al Sudani, the night watchman at a school in Baghdad, Baltimore Sun, 7/13/03

"Iraqis are looking forward to this day. They have been dreaming for so many years to have a government run by not only one man."
Sherwan Dizayee, a member of the Kurdistan Democratic Party, Los Angeles Times, 7/13/03

"He [Saddam] occupied Iraq for 25 years. It's not important that the Americans are here. What is important is that they got rid of Saddam Hussein. Now I feel free."
Fadil Emara, a shopkeeper in Baghdad, Agence France Presse, 7/12/03

"I want to help my country to make a new life, to get human rights, and also to get modern life, especially because we are a rich country."
An Iraqi translator for the Allied forces, The New York Times, 7/08/03

"We can't train staff fast enough. People are desperate here for a neutral free press after 30 years of a totalitarian state."
Saad al-Bazzaz, editor of the Azzaman Daily in Baghdad, The Independent (London), 7/08/03

"The Americans did a very good thing when they crushed Saddam for the Iraqis."
Khither Jaafar, a member of a Shiite party outlawed by Saddam, Los Angeles Times, 7/08/03

"U.S.-U.K., Liberators of Iraq from Saddam's Terror."
A banner hanging outside the entrance to central Suleimaniyah in Iraq, Chicago Tribune, 7/05/03

"We as a council were chosen by the people. God willing we will work to achieve the hopes and wishes of the people."
Mohammed al-Assadi, a representative on the new Najaf City Council, Associated Press, 7/07/03

"We were like a tightly covered pot which no one knew what it contained. Now that the cover has been removed, you can't imagine what you will discover."
Majed al-Ghazali, who now dreams of setting up a children's music school in Iraq, Associated Press, 7/07/03

"We feel liberated. We're very very happy."
Dana Mohammed, manager of a fast food restaurant in Suleimaniyah, Chicago Tribune, 7/05/03

"I can feel it inside. All Iraqis are feeling freedom. This is a good start of a new Iraq."
Saniya al-Raheem, a 56-year-old housewife in Baghdad, Agence France Presse, 7/03/03

"It was a cruel system. We were living under terror and we all suffered from it. It was for our own survival not to talk about politics. We could not even discuss our personal problems openly."
Balkis Al-Shamary, a clerk in an Iraqi shop, Agence France Presse, 7/03/03

"During the Saddam years, we did not even have hopes. We were living only to survive. Now I have lots of dreams and hopes."
Hansam Hassan, a pediatrician at Baghdad's Al-Alwiya Children's Hospital, Agence France Presse, 7/03/03

"I like free discussions. I talk about these issues with my families and friends. This could never happen during the Saddam years."
Maha Abrahim, owner of a wedding dress shop in Baghdad, Agence France Presse, 7/03/03

"A thousand thanks to Bush!"
Abdel Karim Hassan, in Basra, The New York Times, 6/27/03

"When I see my female students, I see hopes in them. They will have more opportunities to travel and learn and have more control of their lives."
Bushra Jani, a professor at Baghdad's Al-Mustansiriya University, Agence France Presse, 7/03/03

"The Americans liberated the Iraqi people from a despotic regime from which they suffered a lot. The Iraqi people could not change that regime with their own hands or overthrow it with their available means. The Americans came and solved this problem quickly and easily and in a way that gladdened the Iraqis."
Baghdad Al-Balat, an Iraqi newspaper, 6/18/03

"It gives me an immense sense of hope. Being here and seeing so many other people here signifies that, despite everything, life goes on."
Shafeeq al-Mahdi, an Iraqi playwright at a performance at the al-Rashid Theater in Baghdad, Associated Press, 6/25/03

"I will run for mayor. Because we have freedom."
Dhirgham Najem, a 23-year-old busboy in Najaf, The New York Times,

6/22/03

"They're buying them [satellites] like they buy bread. They say they're buying freedom."
Mohammed al-Mulla, a worker at an Iraqi electronics store, Associated Press, 6/25/03

"This is the first time we as Shiites can represent ourselves and talk with a loud voice. They never let us express our feelings."
Akil Dair, a part-time student at Baghdad University, The New York Times, 6/21/03

"Look at Saddam here, they have painted his eyes. Now he cannot see anymore. We also tore all his pictures from our textbooks. I only left one portrait on my math textbook as a souvenir, but I put mascara on his eyes and colored his lips in red."
Salam, a 10-year-old boy pointing to an old mural of Saddam in Baghdad, Agence France Presse, 6/21/03

"Owning or selling such songs was punishable by a one-and-a-half year prison sentence under Saddam. After being oppressed for 35 years, we are now scrambling to grab these songs, to which we listen with impunity."
Ahmad, whose shop in Baghdad is selling large amounts of previously banned Shiite music, Agence France Presse, 6/18/03

"This is the freedom exhibition. I'm flying now."
Mohammed Rasim, a 29-year-old Iraqi artist who was finally able to show his paintings in an exhibit once Saddam fell, Associated Press, 6/18/03

"We are so glad to be rid of Saddam Hussein."
Habid Khanger, who waited to marry until Saddam fell and his policies ended, USA Today, 6/17/03

"Why call us occupied? We are liberated."
Mohammed Hanash Abbas, co-owner of Iqra'a bookstore in Baghdad, Associated Press, 6/17/03

"Saddam would not allow us here; he would slay whoever came here. It's freedom now!"
Salah Maadi Khafaji, an Iraqi swimming in a part of the Tigris that had been off limits to ordinary Iraqis, Los Angeles Times, 6/17/03

"America has shown us compassion we never had from Saddam or fellow Arabs."
Attallah Zeidan, co-owner of a small bookstore in Baghdad, Associated Press, 6/17/03

"I should have freedom to wear or not to wear the veil. I don't want to let these people dictate my thoughts. I am an educated woman. I am a religious woman. I know my duties to God."
Kawkab Jalil, a woman in Baghdad who decided to take off her veil, The

Washington Post, 6/17/03

"When I leave my job at night, I am very happy, very proud about myself. We must help the Americans, and show them our traditions."
Suhair Karmasha, the first Iraqi woman to work with the Americans at Baghdad's city hall, The Washington Post, 6/17/03

"We are like newborn children. We are very, very happy."
Ali Hashem Jasim, in Iraq, Chicago Tribune, 6/13/03

"We broke the dams when the Iraqi army left. We want to teach our children how to fish, how to move on the water again."
Qasim Shalgan Lafta, a Marsh Arab and former fisherman who helped restore the water to the Iraqi wetlands that Saddam had destroyed, Chicago Tribune, 6/13/03

"Before, we saw Saddam on one channel, then we saw Saddam on another channel. When the signal went off, we'd hear Saddam. Even in our dreams, we heard his voice. It's better than before."
Tahir Sadeq, an Iraqi hotel manager, The Washington Post, 6/13/03

"Before, we couldn't speak. Before, we couldn't live. But life has changed from bad to best in Sulaymaniyah. I hope everyone in Iraq can live like us soon."
Abdul Karim, a 70-year-old Iraqi, The Atlanta Journal-Constitution, 6/12/03

"The name of Saddam had a value among us, but now, I do not love Saddam. I feel I have been deceived. I am shocked to hear about his crimes against our people."
Yaaser Akram, an 11th-grade student in Baghdad, Associated Press, 6/12/03

"I want to know the secrets of Saddam. Before, we couldn't even say his name, and now we can know the truth."
Abdul, who bought a copy of one of Saddam's home movies, Associated Press, 6/12/03

"I have no more fear now. From the moment Iraq was liberated I felt as though my two sons had been brought back to me."
A woman whose 17-year-old son, Sardar Osman Faraj, was executed in Iraq in 1985 and another was killed by unknown assassins in 1992. Los Angeles Times, 6/8/03

"It's a big change. We used to get central instructions from the Ministry of Information. Now we no longer do. Azzaman is independent. It lets the readers learn and decide the political currents."
Abdel-Majid, of the Azzaman newspaper in Iraq, Washington Post, 6/8/03

"Things have changed. There's not the same fear. I didn't see my future here before. Now, maybe I do."
Ardelan Karim, who unsuccessfully attempted to flee Iraq four times after escaping Saddam's executioners, The New York Times, 06/05/03

"We are all very happy and comfortable. This is the freedom we want."
Yizmak Askander Abu, a teacher in Rassalin, The Times (London), 06/05/03

"I never allowed myself to live all these years. Every day I thought, now they're going to come and take me. I was always waiting."
Nasir al-Husseini, 22, who survived a mass execution at age 10, The New York Times, 06/01/03

"Freedom means that Saddam is no longer around."
Firas al-Dujaili, an Iraqi doctor, Associated Press, 5/29/03

"This is like a dream for us. The Americans liberated us and gave us our freedom. We hope they stay to protect the minorities like us."
Emir Farooq Saeed Ali Beg, a member of the formerly persecuted Yazidi tribe, The Times (London), 06/05/03

"For the first time in Iraq, democratic processes are put in place to elect government officials. Democratic elections are a new phenomenon in today's Iraq. True democracy appears with the absence of dictatorships and tyranny."
The Iraqi newspaper Al Naba, 06/01/03

"...[T]he Iraqi people are too happy that Saddam is gone. Too happy."
Salim, a citizen of Baghdad, Milwaukee Journal Sentinel, 06/01/03

"We are so happy, not just for the contract, but to work again in our country with our people and our equipment to help rebuild our country."
Loay Ibrahim Al-Saied, an Iraqi engineer whose company received a contract to construct a highway bypass, PR Newswire European, 5/30/03

"Freedom means to travel, to get the job I want, to study in the college I want."
Ahmed al-Samarai, a citizen of Iraq, Associated Press, 5/29/03

"I couldn't teach the students the truth. I was unable to tell them that we were ruled by a dictator. If I did, my neck would be on the line."
Wijda Khalidi, an Iraqi schoolteacher, Associated Press, 5/29/03

"I cannot describe how I am glad. After so many years of dictatorship, we have chosen our own leader."
Kemal Kerkuki, after participating in the election of Kirkuk's new mayor, The New York Times, 5/29/03

"Now that Iraq is free, we are demanding freedom and equal rights that Iraqi women have always been deprived of."
Eman Ahmed, member of the Rising Iraqi Women's Organization, Associated Press, 5/21/03

"I can tell you all these things now because we are free. Before, we lived like exiles in our own country."
Suhaib Abbas Majeed, an Iraqi medical student, The Atlanta Journal-Constitution, 5/21/03

"This is the first time in our lives we have experienced democracy. It is a beautiful thing. Everyone is excited. Everyone is here. ...Not complaining. Coming to vote."
Rabaab Mahmoud Kassar, a female attorney in Najaf who participated in the election of the town's new judges, The Washington Post, 5/21/03

"We've been living in jail for three decades. Now, we are free. Help is coming. Day by day, life is for the better."
Saddam Agil, grandfather of five and resident of Basra, USA Today, 5/20/03

"Before we used to commemorate the day hidden at home, we were afraid of Saddam's agents who were everywhere and spied on us. Today I feel happy."
Faithela Asam, an Iraqi Shiite, on publicly celebrating the birthday of Mohamed for the first time in decades, Agence France Presse, 5/19/03

"We are a free voice that does not belong to any party. We wanted this channel to be free and speak in the name of all Iraqi people."
Khalil al-Tayar, director of the new Karbala Television station, Associated Press, 5/19/03

"Most Iraqis did not know what freedom was, but have shown they prefer it after finding it now. Most Iraqis do not know what democracy is, but they will certainly love it once they taste it."
Amir Taheri, Al-Sharq al-Awsat, 5/19/03

"We can say anything we want in public. Now we're free."
Safaz al Hellou, an Iraqi teenager, The Philadelphia Inquirer, 5/19/03

"This is the first attempt for us to run our town by ourselves. We are ready to rebuild our town, and we are ready to rebuild our country."
Najim Abed Mahdi, a chairman of the Umm Qasr interim town council, The Guardian (London), 5/15/03

"This is the happiest moment we all felt. It's a primordial feeling -- this tyrant coming down."
Yussra Hussen, San Francisco Chronicle, 5/12/03

"I am happy that Saddam is gone. The teachers told me to love Saddam. My parents told me he was a bad man."
Dina, 7, U.S. News & World Report, 5/12/03

"We are not fighting anybody. We will not raise our weapons because freedom is within our sight. We want an Iraqi government that represents all Iraqis. Sunni and Shia Muslims, Kurds, Turcomans and religious minorities -- they will have their rights in this land."
Returned Iraqi exile Ayatollah Hakim, speech to Iraqis in Najaf, London Daily Telegraph, 5/12/03

"(April 9th was) a good day for all Iraqis. The people of Iraq want democracy. They lived without it for 35 years. It was like Russians under Stalin."

Ministry Engineer Ghassan Yassin, 53, Victoria Times-Colonist (Canada), 5/11/03

"Beautiful, beautiful. Not Iraqi TV. Not Saddam Hussein TV. Beautiful."
Akhbal Ibrahim Rashid watching her satellite dish-equipped television, Los Angeles Times, 5/9/03

"All my life I have been escaping. So I have dreamed of freedom, of traveling abroad, of feeling life the way all young people do. Maybe now I will."
Mohammed Khadum, 28, in Baghdad, Washington Post, 5/8/03

"You cannot imagine what it means for us to be here on this national stage, where everything we stand for was forbidden. Now it is ours."
Oday Rashid, an Iraqi musician and documentary filmmaker, Los Angeles Times, 5/5/03

"I saw the world for the first time. I saw where we were. I saw presidents and cities and people from everywhere! The whole world!"
School Principal Bushra Cesar, after buying a satellite TV dish, New York Times, 5/4/03

"We will keep on somehow. Now we have the most important thing that we need. There is no one to stop us from saying anything we want onstage."
Basim Hajar, coauthor and director of a play criticizing Saddam Hussein's regime performed in a building where -- before the war -- only works sanctioned by the government were allowed. Los Angeles Times, 5/5/03

"Before, if I had sold this, they would have cut my head from my body."
Imad Saad, selling a copy of an opposition-run paper, Los Angeles, 5/3/03

I've read around a few places on the web describing a mod that lets you listen to cell phones on a lower band.
I belive it's in the 400mhz range.
Surely a scanner enthusiest such as yourself knows about this mod. especially since you own SEVEN uniden bc780's! ;)

You still hold that position after the fighter planes were recently
uncovered from the sand? No one knew they were there until they were
"stumbled upon".

Seems to me if you can successfully hide a fleet of fighter jets you
could easily hide the components of weapons of mass destruction and
hide them.

Since you are so quick to accuse now, are you prepared to apologize
later if its found out that you are mistaken? Should everyone be
accountable for what they say or is that only a requirement for
President Bush?

There is a virtual downconverter mod for the 780 that allows you full
800MHz coverage. There is an article in the March 2002 Scanning USA
magazine that tells how to do it. You can get back issue of it from
there website.

The DNC doesn't care anymore about Iraqi citizens then they care about the American working class voter. They are only interested in consolidating political power for themselves as the lights go out in California and the budget soars over 35 Billion and the people can't find jobs. If you want a job next year, vote Republican.

Voices of Freedom: 100 Iraqi's speak out:

"I can honestly say now that I'm proud to be an Iraqi. Because of what has happened, because there is freedom here like I have not known before. Now I can talk-to you, to people I could never talk to before. I am a simple man. I am just a worker. But even these simple things-talking-give me hope."
Khalid Nemah, an Iraqi taxi driver, Chicago Tribune, 8/05/03

"Iraqis are very thirsty to learn what is happening outside of Iraq."
Abbas Darwish, owner of a Baghdad shop that sells newspapers, The New York Times, 8/05/03

"You never knew who was sitting next to you. In the past no one would dare to just speak out. Now everybody is talking. About federalism, about a monarchy. ... I think our aims are just one, to eliminate persecution for anyone ever again."
Jafar Adel Amr, a tool salesman in Iraq, Chicago Tribune, 8/05/03

"Freedom is much sweeter. I can get up in the morning and decide whether I want to shave or not; if someone in my family is sick, I can stay home with them. I don't need to ask permission."
Salim Kasim, one of Uday's chief mechanics, Los Angeles Times, 8/02/03

"We didn't believe these things, but we had to say them. Saddam was there in all the books, even the math books."
Ghada Jassen, a fifth grade teacher in Iraq, Chicago Tribune, 7/31/03

"We don't want patriotic education anymore. Nothing about war. We want flowers and springtime in the texts, not rifles and tanks."
Dunia Nabel, a teacher in Baghdad, Chicago Tribune, 7/31/03

"We have full freedom to print anything we want. The coalition doesn't interfere in our work but, of course, we have our own red lines."
Ishtar el Yassiri, editor of the new satirical Iraqi newspaper Habez Bouz, Financial Times (London), 7/31/03

"It is like the soul coming back to the body."
Ibrahim Abdullah, a refugee returning to Iraq, The Times (London), 7/31/03

"The tension is reducing every day. We are seeing a change. People are starting to realize that the soldiers are not here to occupy Fallujah forever-they're here to help us rebuild."
Taha Bedawi, mayor of Fallujah, The Washington Post, 7/29/03

"It's a chance to defend our country for our people. It's good to work with the American soldiers. They give us new training and a mutual respect."
Omar Abdullah, a recruit for Mosul's newly formed joint security group, Associated Press, 7/29/03

"We're happy, we're rid of Saddam Hussein; the torture and executions of 35 years are over. We should wait to see what the Americans will do."
Ahmed Abdel-Sahib, in Najaf, The Washington Post, 7/28/03

"There is a certain harmony. But you can not rebuild a city or country-a country destroyed by war-in one month."
Mohammed Tahar al-Abid Rabu, a member of the Mosul city council, Agence France Presse, 7/28/03

"For the first time I feel really free."
Latif Yahia, Uday's former double, after hearing of Uday's death, Agence France Presse, 7/26/03

"The Iraqi people have got rid of two of the biggest criminals in history. Their victims and the sons of their victims, who lived for 35 years under oppression, are feeling proud and happy."
Muwaffak al-Rubaiei, a member of the Iraqi Governing Council, Agence France Presse and Reuters, 7/25/03

"We are more free nowadays. My father gave me the full freedom to marry whom I choose."
Raina Nuri, a woman in Baghdad, Christian Science Monitor, 7/25/03

"We felt better after the regime fell, now we are really happy-we have been freed from our nightmare."
Alaa' Kathem, an Iraqi soccer player who had been punished for losing games, Financial Times (London), 7/24/03

"Iraq is now free from torture. Free from Uday."
Amu Baba, a legendary soccer star in Iraq, Los Angeles Times, 7/24/03

"We feel safer now because we used to hear lots of stories about girls. We were so afraid to go out in case Uday saw us."
Farrah, a 15-year-old Iraqi girl, Newsday (New York), 7/24/03

"My father died because of Saddam. I don't want to speak about the reasons. But I was so happy. I was at home when I saw it on the TV. I woke up my aunts and told them the good news. I used to hate those guys so much and so I felt so at ease in my heart."

Osama Zaid, a distant cousin of Uday, after learning of Uday's death, Newsday (New York), 7/24/03

"Even the blind can see what Saddam Hussein did, taking Iraq into so many wars and doing little even for this town, no sports club, no decent hotels."
Wail al-Ali, Tikrit's new mayor, The Guardian, 7/22/03

"We are flying with happiness since Saddam is gone."
Zahar Hassan, in Iraq, Agence France Presse, 7/21/03

"There's more opportunity, more chances to earn money."
Um Khalid, on life in post-Saddam Baghdad, The Christian Science Monitor, 7/21/03

"[Uday] was a bad man, and he used to beat the soccer players if they lost a game. I think he used to treat the lions better than the people."
Mussab Ismas, a 13-year old boy, viewing Uday's lions at the Baghdad zoo, The Washington Post, 7/21/03

"Let the Americans stay, they protect us. I don't see them hurting anyone."
A mother living in Baghdad, The Christian Science Monitor, 7/21/03

"He [Uday] was a sick man, and he kept lions and tigers just to show his manhood, to show everyone that he cared more about animals than people. But he amputated their claws, and he took away their freedom, just like the people."
Alaa Karim, a Baghdad zoo employee, The Washington Post, 7/21/03

"I can see that the American soldiers are free. In our old army, we were always under pressure and strict military orders. There was tough punishment."
Raad Mamoud, a former Iraqi soldier, USA Today, 7/21/03

"I hope Iraq comes back strong. I am in favor of the new government."
Uday Kadhu, a Baghdad car salesman on the Iraqi archery team, Agence France Presse, 7/16/03

"In our opinion, the most significant thing about the formation of the transitional Governing Council is that it includes important personalities that are known to the masses and that represent the different political, national, democratic and progressive forces, as well as independent political organizations and religious denominations."
Iraqi newspaper Al-Manar, 7/15/03

"I felt that we had gone back to the year 1930. I feel that Iraq has started back from zero. We have wasted 75 years waiting to taste freedom."
Hadid al-Gailani, after the Governing Council announced the abolition of Baathist holidays, The Boston Globe, 7/14/03

"I helped deliver thousands of Iraqi babies, and now I am taking part in the birth of a new country and a new rule based on women's rights, humanity, unity and freedom."
Raja Habib al-Khaza'i, the director of an Iraqi maternity hospital and a member of the Governing Council, Associated Press, 7/13/03

"The formation of this council which represents all sectors of Iraqi society is the birth of democracy in the country. It is better than Saddam's government of destruction and dictatorship."
Razzak Abdul-Zahra, a 35-year-old engineer in Baghad, Associated Press, 7/13/03

"The establishment of this council represents the Iraqi national will after the collapse of the dictatorial regime."
Muhammad Bahr al-Ulum, a Shiite cleric on the Governing Council, Associated Press, 7/13/03

"It's a hard situation. But now that Saddam has fallen, it's OK. We can wait for the future now."
Muhammed Abdul al Sudani, the night watchman at a school in Baghdad, Baltimore Sun, 7/13/03

"Iraqis are looking forward to this day. They have been dreaming for so many years to have a government run by not only one man."
Sherwan Dizayee, a member of the Kurdistan Democratic Party, Los Angeles Times, 7/13/03

"He [Saddam] occupied Iraq for 25 years. It's not important that the Americans are here. What is important is that they got rid of Saddam Hussein. Now I feel free."
Fadil Emara, a shopkeeper in Baghdad, Agence France Presse, 7/12/03

"I want to help my country to make a new life, to get human rights, and also to get modern life, especially because we are a rich country."
An Iraqi translator for the Allied forces, The New York Times, 7/08/03

"We can't train staff fast enough. People are desperate here for a neutral free press after 30 years of a totalitarian state."
Saad al-Bazzaz, editor of the Azzaman Daily in Baghdad, The Independent (London), 7/08/03

"The Americans did a very good thing when they crushed Saddam for the Iraqis."
Khither Jaafar, a member of a Shiite party outlawed by Saddam, Los Angeles Times, 7/08/03

"U.S.-U.K., Liberators of Iraq from Saddam's Terror."
A banner hanging outside the entrance to central Suleimaniyah in Iraq, Chicago Tribune, 7/05/03

"We as a council were chosen by the people. God willing we will work to achieve the hopes and wishes of the people."
Mohammed al-Assadi, a representative on the new Najaf City Council,

Associated Press, 7/07/03

"We were like a tightly covered pot which no one knew what it contained. Now that the cover has been removed, you can't imagine what you will discover."
Majed al-Ghazali, who now dreams of setting up a children's music school in Iraq, Associated Press, 7/07/03

"We feel liberated. We're very very happy."
Dana Mohammed, manager of a fast food restaurant in Suleimaniyah, Chicago Tribune, 7/05/03

"I can feel it inside. All Iraqis are feeling freedom. This is a good start of a new Iraq."
Saniya al-Raheem, a 56-year-old housewife in Baghdad, Agence France Presse, 7/03/03

"It was a cruel system. We were living under terror and we all suffered from it. It was for our own survival not to talk about politics. We could not even discuss our personal problems openly."
Balkis Al-Shamary, a clerk in an Iraqi shop, Agence France Presse, 7/03/03

"During the Saddam years, we did not even have hopes. We were living only to survive. Now I have lots of dreams and hopes."
Hansam Hassan, a pediatrician at Baghdad's Al-Alwiya Children's Hospital, Agence France Presse, 7/03/03

"I like free discussions. I talk about these issues with my families and friends. This could never happen during the Saddam years."
Maha Abrahim, owner of a wedding dress shop in Baghdad, Agence France Presse, 7/03/03

"A thousand thanks to Bush!"
Abdel Karim Hassan, in Basra, The New York Times, 6/27/03

"When I see my female students, I see hopes in them. They will have more opportunities to travel and learn and have more control of their lives."
Bushra Jani, a professor at Baghdad's Al-Mustansiriya University, Agence France Presse, 7/03/03

"The Americans liberated the Iraqi people from a despotic regime from which they suffered a lot. The Iraqi people could not change that regime with their own hands or overthrow it with their available means. The Americans came and solved this problem quickly and easily and in a way that gladdened the Iraqis."
Baghdad Al-Balat, an Iraqi newspaper, 6/18/03

"It gives me an immense sense of hope. Being here and seeing so many other people here signifies that, despite everything, life goes on."
Shafeeq al-Mahdi, an Iraqi playwright at a performance at the al-Rashid Theater in Baghdad, Associated Press, 6/25/03

"I will run for mayor. Because we have freedom."
Dhirgham Najem, a 23-year-old busboy in Najaf, The New York Times, 6/22/03

"They're buying them [satellites] like they buy bread. They say they're buying freedom."
Mohammed al-Mulla, a worker at an Iraqi electronics store, Associated Press, 6/25/03

"This is the first time we as Shiites can represent ourselves and talk with a loud voice. They never let us express our feelings."
Akil Dair, a part-time student at Baghdad University, The New York Times, 6/21/03

"Look at Saddam here, they have painted his eyes. Now he cannot see anymore. We also tore all his pictures from our textbooks. I only left one portrait on my math textbook as a souvenir, but I put mascara on his eyes and colored his lips in red."
Salam, a 10-year-old boy pointing to an old mural of Saddam in Baghdad, Agence France Presse, 6/21/03

"Owning or selling such songs was punishable by a one-and-a-half year prison sentence under Saddam. After being oppressed for 35 years, we are now scrambling to grab these songs, to which we listen with impunity."
Ahmad, whose shop in Baghdad is selling large amounts of previously banned Shiite music, Agence France Presse, 6/18/03

"This is the freedom exhibition. I'm flying now."
Mohammed Rasim, a 29-year-old Iraqi artist who was finally able to show his paintings in an exhibit once Saddam fell, Associated Press, 6/18/03

"We are so glad to be rid of Saddam Hussein."
Habid Khanger, who waited to marry until Saddam fell and his policies ended, USA Today, 6/17/03

"Why call us occupied? We are liberated."
Mohammed Hanash Abbas, co-owner of Iqra'a bookstore in Baghdad, Associated Press, 6/17/03

"Saddam would not allow us here; he would slay whoever came here. It's freedom now!"
Salah Maadi Khafaji, an Iraqi swimming in a part of the Tigris that had been off limits to ordinary Iraqis, Los Angeles Times, 6/17/03

"America has shown us compassion we never had from Saddam or fellow Arabs."
Attallah Zeidan, co-owner of a small bookstore in Baghdad, Associated Press, 6/17/03

"I should have freedom to wear or not to wear the veil. I don't want to let these people dictate my thoughts. I am an educated woman. I am a religious woman. I know my duties to God."

Kawkab Jalil, a woman in Baghdad who decided to take off her veil, The Washington Post, 6/17/03

"When I leave my job at night, I am very happy, very proud about myself. We must help the Americans, and show them our traditions."
Suhair Karmasha, the first Iraqi woman to work with the Americans at Baghdad's city hall, The Washington Post, 6/17/03

"We are like newborn children. We are very, very happy."
Ali Hashem Jasim, in Iraq, Chicago Tribune, 6/13/03

"We broke the dams when the Iraqi army left. We want to teach our children how to fish, how to move on the water again."
Qasim Shalgan Lafta, a Marsh Arab and former fisherman who helped restore the water to the Iraqi wetlands that Saddam had destroyed, Chicago Tribune, 6/13/03

"Before, we saw Saddam on one channel, then we saw Saddam on another channel. When the signal went off, we'd hear Saddam. Even in our dreams, we heard his voice. It's better than before."
Tahir Sadeq, an Iraqi hotel manager, The Washington Post, 6/13/03

"Before, we couldn't speak. Before, we couldn't live. But life has changed from bad to best in Sulaymaniyah. I hope everyone in Iraq can live like us soon."
Abdul Karim, a 70-year-old Iraqi, The Atlanta Journal-Constitution, 6/12/03

"The name of Saddam had a value among us, but now, I do not love Saddam. I feel I have been deceived. I am shocked to hear about his crimes against our people."
Yaaser Akram, an 11th-grade student in Baghdad, Associated Press, 6/12/03

"I want to know the secrets of Saddam. Before, we couldn't even say his name, and now we can know the truth."
Abdul, who bought a copy of one of Saddam's home movies, Associated Press, 6/12/03

"I have no more fear now. From the moment Iraq was liberated I felt as though my two sons had been brought back to me."
A woman whose 17-year-old son, Sardar Osman Faraj, was executed in Iraq in 1985 and another was killed by unknown assassins in 1992. Los Angeles Times, 6/8/03

"It's a big change. We used to get central instructions from the Ministry of Information. Now we no longer do. Azzaman is independent. It lets the readers learn and decide the political currents."
Abdel-Majid, of the Azzaman newspaper in Iraq, Washington Post, 6/8/03

"Things have changed. There's not the same fear. I didn't see my future here before. Now, maybe I do."
Ardelan Karim, who unsuccessfully attempted to flee Iraq four times

after escaping Saddam's executioners, The New York Times, 06/05/03

"We are all very happy and comfortable. This is the freedom we want."
Yizmak Askander Abu, a teacher in Rassalin, The Times (London), 06/05/03

"I never allowed myself to live all these years. Every day I thought, now they're going to come and take me. I was always waiting."
Nasir al-Husseini, 22, who survived a mass execution at age 10, The New York Times, 06/01/03

"Freedom means that Saddam is no longer around."
Firas al-Dujaili, an Iraqi doctor, Associated Press, 5/29/03

"This is like a dream for us. The Americans liberated us and gave us our freedom. We hope they stay to protect the minorities like us."
Emir Farooq Saeed Ali Beg, a member of the formerly persecuted Yazidi tribe, The Times (London), 06/05/03

"For the first time in Iraq, democratic processes are put in place to elect government officials. Democratic elections are a new phenomenon in today's Iraq. True democracy appears with the absence of dictatorships and tyranny."
The Iraqi newspaper Al Naba, 06/01/03

"...[T]he Iraqi people are too happy that Saddam is gone. Too happy."
Salim, a citizen of Baghdad, Milwaukee Journal Sentinel, 06/01/03

"We are so happy, not just for the contract, but to work again in our country with our people and our equipment to help rebuild our country."
Loay Ibrahim Al-Saied, an Iraqi engineer whose company received a contract to construct a highway bypass, PR Newswire European, 5/30/03

"Freedom means to travel, to get the job I want, to study in the college I want."
Ahmed al-Samarai, a citizen of Iraq, Associated Press, 5/29/03

"I couldn't teach the students the truth. I was unable to tell them that we were ruled by a dictator. If I did, my neck would be on the line."
Wijda Khalidi, an Iraqi schoolteacher, Associated Press, 5/29/03

"I cannot describe how I am glad. After so many years of dictatorship, we have chosen our own leader."
Kemal Kerkuki, after participating in the election of Kirkuk's new mayor, The New York Times, 5/29/03

"Now that Iraq is free, we are demanding freedom and equal rights that Iraqi women have always been deprived of."
Eman Ahmed, member of the Rising Iraqi Women's Organization, Associated Press, 5/21/03

"I can tell you all these things now because we are free. Before, we lived like exiles in our own country."
Suhaib Abbas Majeed, an Iraqi medical student, The Atlanta Journal-Constitution, 5/21/03

"This is the first time in our lives we have experienced democracy. It is a beautiful thing. Everyone is excited. Everyone is here. ...Not complaining. Coming to vote."
Rabaab Mahmoud Kassar, a female attorney in Najaf who participated in the election of the town's new judges, The Washington Post, 5/21/03

"We've been living in jail for three decades. Now, we are free. Help is coming. Day by day, life is for the better."
Saddam Agil, grandfather of five and resident of Basra, USA Today, 5/20/03

"Before we used to commemorate the day hidden at home, we were afraid of Saddam's agents who were everywhere and spied on us. Today I feel happy."
Faithela Asam, an Iraqi Shiite, on publicly celebrating the birthday of Mohamed for the first time in decades, Agence France Presse, 5/19/03

"We are a free voice that does not belong to any party. We wanted this channel to be free and speak in the name of all Iraqi people."
Khalil al-Tayar, director of the new Karbala Television station, Associated Press, 5/19/03

"Most Iraqis did not know what freedom was, but have shown they prefer it after finding it now. Most Iraqis do not know what democracy is, but they will certainly love it once they taste it."
Amir Taheri, Al-Sharq al-Awsat, 5/19/03

"We can say anything we want in public. Now we're free."
Safaz al Hellou, an Iraqi teenager, The Philadelphia Inquirer, 5/19/03

"This is the first attempt for us to run our town by ourselves. We are ready to rebuild our town, and we are ready to rebuild our country."
Najim Abed Mahdi, a chairman of the Umm Qasr interim town council, The Guardian (London), 5/15/03

"This is the happiest moment we all felt. It's a primordial feeling -- this tyrant coming down."
Yussra Hussen, San Francisco Chronicle, 5/12/03

"I am happy that Saddam is gone. The teachers told me to love Saddam. My parents told me he was a bad man."
Dina, 7, U.S. News & World Report, 5/12/03

"We are not fighting anybody. We will not raise our weapons because freedom is within our sight. We want an Iraqi government that represents all Iraqis. Sunni and Shia Muslims, Kurds, Turcomans and religious minorities -- they will have their rights in this land."
Returned Iraqi exile Ayatollah Hakim, speech to Iraqis in Najaf,

London Daily Telegraph, 5/12/03

"(April 9th was) a good day for all Iraqis. The people of Iraq want democracy. They lived without it for 35 years. It was like Russians under Stalin."
Ministry Engineer Ghassan Yassin, 53, Victoria Times-Colonist (Canada), 5/11/03

"Beautiful, beautiful. Not Iraqi TV. Not Saddam Hussein TV. Beautiful."
Akhbal Ibrahim Rashid watching her satellite dish-equipped television, Los Angeles Times, 5/9/03

"All my life I have been escaping. So I have dreamed of freedom, of traveling abroad, of feeling life the way all young people do. Maybe now I will."
Mohammed Khadum, 28, in Baghdad, Washington Post, 5/8/03

"You cannot imagine what it means for us to be here on this national stage, where everything we stand for was forbidden. Now it is ours."
Oday Rashid, an Iraqi musician and documentary filmmaker, Los Angeles Times, 5/5/03

"I saw the world for the first time. I saw where we were. I saw presidents and cities and people from everywhere! The whole world!"
School Principal Bushra Cesar, after buying a satellite TV dish, New York Times, 5/4/03

"We will keep on somehow. Now we have the most important thing that we need. There is no one to stop us from saying anything we want onstage."
Basim Hajar, coauthor and director of a play criticizing Saddam Hussein's regime performed in a building where -- before the war -- only works sanctioned by the government were allowed. Los Angeles Times, 5/5/03

"Before, if I had sold this, they would have cut my head from my body."
Imad Saad, selling a copy of an opposition-run paper, Los Angeles, 5/3/03

402. Re: Bush fit for duty.. Send him over therre

August 8, 2003, marks the hundredth day since the end of major combat operations in Iraq. Results in Iraq: 100 Days Toward Security and Freedom presents highlights of the successes shared by post-Saddam Iraqis and their partners in the renewal of their nation. Under the leadership of the Coalition Provisional Authority (CPA) and the new Iraqi Governing Council, major strides are being planned and made in three key areas: security, economic stability and growth, and democracy. As this report is issued, the CPA is working with Iraqis to implement a strategic plan with measurable goals. Outside observers and coalition leaders agree that much remains to be done to restore order and bring prosperity to a brutalized society and an infrastructure suffering from decades of malign neglect. The steps toward sovereignty and democracy will be difficult and require patience and time. Substantial progress is being made on all fronts. As President Bush said last week, the "success of a free Iraq will ... demonstrate to other countries in that region that national prosperity and dignity are found in representative government and free institutions.... As freedom advances in the Middle East, those societies will be less likely to produce ideologies of hatred and produce recruits for terror." This report focuses on 10 areas where the liberation of Iraq has improved the lives of Iraqis and the safety and security of the world. Some examples in this report include:

For the first time in the lives of most Iraqis, a representative government is being established and human rights and freedom are being enshrined.

Nearly 3 dozen countries are contributing financially to the renewal of Iraq, and 19 countries are providing personnel for Operation Iraqi Freedom.

The food distribution system is functioning, based on equitable needs rather than cronyism.

Nearly all Iraqi children have finished exams from last year. All universities are open.

A $53 million program to rehabilitate more than 100 schools and clinics is underway.

10 Ways the Liberation of Iraq Supports the War on Terror:

With the fall of Saddam Hussein's regime, Iraq is no longer a state sponsor of terror. According to State Department reports on terrorism,

before the removal of Saddam's regime, Iraq was one of seven state sponsors of terror.

Saddam Hussein's regime posed a threat to the security of the United States and the world. With the removal of Saddam Hussein's regime, a leader who pursued, used, and possessed weapons of mass destruction is no longer in power.

Saddam Hussein would not uphold his international commitments, and now that he is no longer in power, the world is safe from this tyrant. The old Iraqi regime defied the international community and seventeen UN resolutions for twelve years and gave every indication that it would never disarm and never comply with the just demands of the world.

A senior al Qaida terrorist, now detained, who had been responsible for al Qaida training camps in Afghanistan, reports that al Qaida was intent on obtaining WMD assistance from Iraq. According to a credible, high-level al Qaida source, Usama Bin Laden and deceased al Qaida leader Muhammad Atif did not believe that al Qaida labs in Afghanistan were capable of manufacturing chemical and biological weapons, so they turned to Iraq for assistance. Iraq agreed to provide chemical and biological weapons training for two al Qaida associates starting in December 2000.

Senior al Qaida associate Abu Musab al-Zarqawi came to Baghdad in May 2002 for medical treatment along with approximately two dozen al Qaida terrorist associates. This group stayed in Baghdad and other parts of Iraq and plotted terrorist attacks around the world.

A safe haven in Iraq belonging to Ansar al-Islam -- a terrorist group closely associated with Zarqawi and al Qaida -- was destroyed during Operation Iraqi Freedom. In March 2003, during a raid on the compound controlled by the terrorists in northeastern Iraq, a cache of documents was discovered, including computer discs and foreign passports belonging to fighters from various Middle East nationalities.

The al Qaida affiliate Ansar al-Islam is known to still be present in Iraq. Such terrorist groups are now plotting against U.S. forces in Iraq.

Law enforcement and intelligence operations have disrupted al Qaida associate Abu Musab Zarqawi's poison plotting in France, Britain, Spain, Italy, Germany, and Russia. The facilities in Northern Iraq, set up by Zarqawi and Ansar al-Islam were, before the war, an al Qaida's poisons/toxins laboratory.

Abu Musa Zarqawi, the al Qaida associate with direct links to Iraq, oversaw those responsible for the assassination of USAID officer Laurence Foley in Amman, Jordan last October.

Saddam Hussein's Iraq provided material assistance to Palestinian terrorist groups, including the Popular Front for the Liberation of

Palestine-General Command, HAMAS, and the Palestine Islamic Jihad, according to a State Department report. This included paying the families of Palestinian suicide bombers, according to testimonials from Palestinians and cancelled checks. Also, according to State Department reports, terrorist groups the Iranian Mujahedin-e-Khalq and the Abu Nidal organization were protected by the Iraqi regime protected by the Iraqi regime.

10 Signs of Better Security:

The Coalition is working with Iraqis to improve internal security throughout the country. While the security situation is improving, dangerous remnants of the former regime and others continue to target progress and success.

New Iraqi army and police forces are being recruited, trained, and equipped. Some 1,200 Iraqis will be trained this year for the new Iraqi army, and in two years, 40,000 army recruits will be trained.

Fifty-eight of 89 Iraqi cities have hired police forces. In total, 34,000 Iraqis are employed in patrolling the streets of their country, and of these, 30,000 Iraqis are currently patrolling with coalition forces.

More than 8,200 tons of ammunition, thousands of AK-47s, grenades, and other weapons have been seized throughout Iraq -- much of which was stored by the Hussein regime in hospitals, schools, and mosques.

The CPA has hired more than 11,000 Iraqis to guard key facilities around the country.

Coalition forces, with information from an Iraqi, conducted operations that lead to the deaths of Uday and Qusay Hussein following their refusal to surrender. To date, 37 of the top 55 most wanted Iraqis have been captured or killed. With the deaths of Uday and Qusay, more and more Iraqis are freed from their fear and are volunteering their services and information.

Coalition forces continue to take the offensive against the remnants of the Ba'athist regime who are targeting the sites and symbols of reconstruction and stabilization successes.

An Iraqi Civil Defense Force will help U.S. and Coalition forces in rooting out Saddam loyalists and criminal gangs who have been attacking military forces and obstructing reconstruction efforts. Four thousand Iraqi militiamen will be trained by U.S. troops over the next eight weeks.

In Basra, 500 river police have been patrolling since June 19.

Some 148,000 U.S. service members and more than 13,000 Coalition troops from 19 countries are serving in Iraq.

Most of Iraq is calm and progress on the road to democracy and freedom not experienced in decades continues. Only in isolated areas are there still attacks.

10 Signs of Better Infrastructure and Basic Services:

Electricity: Electricity is now more equitably distributed and more stable, instead of, as during Saddam Hussein's rule, being supplied to Baghdad at the expense of the rest of the country. For the rest of 2003, $294 million is budgeted to improve electrical systems.

Water Systems: Water supply in many areas is now at pre-conflict levels. Over 2000 repairs have been made to 143 water networks, and water quality sampling has restarted. There are plans to add 450 million liters of capacity to Baghdad's system.

Healthcare: Iraqi hospitals are up and running, and healthcare, previously available only for Ba'athist elite, is now available to all Iraqis. Drugs are being supplied to hospitals and clinics, and medical worker salaries are being paid regularly, ensuring employees attend work. Vaccinations are available across the country, and anti-malarial spraying will take place this autumn.

Returning Refugees: Refugees began returning from Saudi Arabia and the United Arab Emirates. UNHCR and the Coalition are working together to ensure that groups of refugees in Jordan and Iran can return to Iraq safely and comfortably in the near future.

Revitalizing Oil Production and Distribution: Repairs and modernizations are being made to the antiquated and neglected oil production and distribution systems. Oil will provide the future wealth of the country but was severely misappropriated by the former regime.

Police: There are 6,000 police on the streets of Baghdad and 34 out of 60 police stations are currently operational. Throughout Iraq, there are some 30,000 police patrolling the streets.

Road Repairs: Emergency road repairs, underway throughout Iraq now, will employ even more Iraqis in the coming weeks.

Airports: The Baghdad and Basra airports are ready to open, and the airport in Basra is expected to begin commercial operations in August. Several airlines are likely to start regular air service to Iraq.

Major Bridges: $4.3 million has been provided to repair the Tikrit Bridge; $4.4 million to rebuild the Al Mat Bridge; and $3.2 million to rebuild the Khazir Bridge.

Port at Umm Qasr: The port at Umm Qasr is open and functioning again, and customs and port authority agents are being trained.

10 Signs of Democracy:

A 25-member national Governing Council includes three women and Kurdish, Sunni, Christian, Turkmen, and Shi'ia representatives. The establishment of this body is a first and important move toward Iraqi self-government.

The Governing Council is creating a Preparatory Commission to write a constitution. After a constitution is approved, elections will lead to a fully sovereign Iraqi government.

There are municipal councils in all major cities and 85 percent of towns, enabling Iraqis to take responsibility for management of local matters like healthcare, water, and electricity.

Provisional councils have been formed in Najaf, Al Anbar, and Basra.

The Baghdad City Advisory Council was inaugurated on July 7, 2003. Its 37 members were selected by members of the city's nine district councils, who themselves were selected by Baghdad citizens in 88 neighborhoods throughout the city.

Local governance councils are robust in Basra and Umm Qasr, helping to identify areas for immediate humanitarian and reconstruction assistance.

The Office of Human Rights and Transitional Justice is working to locate missing persons, investigate, analyze, and exhume mass graves, archive past human rights abuses and promote civic education/public awareness about human rights.

To facilitate voluntary resolutions of property claims, the Property Reconciliation Facility is being created.

The Coalition is helping fund and train Iraqis wanting to create their own non-governmental organizations. These new NGOs include public policy think tanks and an association of former political prisoners.

More than 150 newspapers are now published in Iraq offering Iraqis access to many different kinds of information. Foreign publications, radio, and television broadcasts are also available.

10 Improvements in the Lives of Iraqi Children:

A "back to school" campaign delivered 1,500 kits with book bags, notebooks, pens and pencils that helped 120,000 students in Baghdad return to their classrooms in May 2003. In preparation for the new school year, 1.2 million kits for secondary school students and 4,000 kits for their schools including desks, chairs, blackboards, and bookshelves are arriving in Iraq.

Malnutrition contributed to high mortality rates in Iraq during Saddam's rule. The food aid for Iraq has continued to supply the public distribution system and has allowed the majority of Iraqis access to food rations. On July 15, the World Food Program reported that nearly 1.5 million metric tons of food, or more than the three months supply required to keep the distribution system operating, have

been dispatched to Iraq. An additional 2.2 million metric tons of food will arrive by the end of October. These steps will contribute to reversing malnutrition.

To date, 22.3 million doses of measles, tuberculosis, hepatitis B, diphtheria, whooping cough, tetanus, and polio vaccines have been provided, enough to vaccinate 4.2 million children.

Nearly all Iraqi children have finished their exams from last year and are ready to start a new school year in the fall. All universities are reopened.

A $53 million program to rehabilitate more than 100 schools and clinics is underway. In the southern region, more than 50 schools are in various stages of rehabilitation. More than 600 schools will be in "like new" condition in time for the beginning of classes.

Five million revised math and science textbooks will be ready before the start of the school year.

Saddam Hussein's rhetoric is being removed from Iraqi schoolchildren's textbooks. In the words of Dunia Nabel, a teacher in Baghdad: "We want flowers and springtime in the texts, not rifles and tanks." (The Chicago Tribune, July 31, 2003).

Ten delivery rooms in hospitals and primary healthcare centers in Basra have been rehabilitated and stocked with essential drugs and medical supplies.

The juvenile institution for children that was the subject of reports of abuse and appalling conditions under Saddam Hussein has been replaced by a project run by UNICEF and NGOs. Seven orphanages have undergone major building renovations and training for staff.

Nearly 3,000 soccer balls were shipped on May 30 and another 60,000 balls on their way to Iraq through a private/public partnership and the U.S. soccer community.

10 Signs of Economic Renewal:

A New Economy: A new Iraqi economy is being built on the principles of market economics, respect for the rule of law, and transparency.

Salaries: The CPA regularly pays salaries to those teachers, healthcare workers, soldiers, police, and other public sector employees who have returned to work. Payments of pensions and other emergency payments have also helped to avert a humanitarian crisis. Teachers' salaries, and other key employees' salaries, have increased four-fold over their pay under Saddam Hussein. Some 39,000 electrical workers are back at work. Other sectors show similar encouraging signs.

Commerce: The marketplace in Baghdad has many goods that were previously unavailable because of sanctions or because they were

forbidden under the previous regime. Items such as satellite dishes are now readily available to Iraqis.

Banks: Banks are open in Baghdad. The CPA is working with Iraqis outside of Baghdad to open banks across the country as soon as possible. In addition, international interest in establishing an Iraqi trade bank has been strong, and proposals from foreign banks are under review for creating this trade facility.

Food: The CPA has purchased the upcoming wheat and barley crops, helping to meet the country's food needs while supporting farmers. These crops include over 600,000 metric tons of Iraqi wheat and more than 300,000 metric tons of Iraqi barley.

Loans for Entrepreneurs: A micro-credit facility is now being set up in the South. Credit facilities for the rest of the country are also planned. Iraq's two major banks will start making small and medium sized business loans to help Iraqi entrepreneurs restart their businesses.

Currency: A unified currency for Iraq has been announced. The exchange of old banknotes for new ones is set to begin October 15.

Iraqis' Savings: The dinar has maintained its value against the dollar, preserving the dinar-dominated savings of Iraqi citizens.

Natural Resources: Oil production is increasing, with daily production of crude averaging 1 million barrels in recent days.

Budget: The budget for the last six months of 2003 is now being executed, and the 2004 budget formulation process has begun. Of the 2003 budget, more than $400 million has been released to Ministries in July and August alone. The 2004 budget process, to be run by Iraqis, will target the most important priorities for the country's reconstruction and build on the spending commitments of the budget for the last six months of 2003.

10 Examples of International Support for the Renewal of Iraq:

The United Nations Secretary General Kofi Annan said of the Iraqi Governing Council: "[The Council's] formation is an important first step towards the full restoration of Iraqi sovereignty." The UN is supporting the renewal of Iraq through the Oil for Food program, and by providing humanitarian assistance, promoting human rights, and assisting the Iraqi Governing Council in rejoining the international community.

The United Nations Security Council passed, without opposition, Resolution 1483, lifting sanctions against the Iraqi regime.

The top 12 financial supporters for the renewal of Iraq are (in descending order): the United States, United Kingdom, Canada, Japan, Australia, Germany, Norway, Denmark, United Arab Emirates, Saudi Arabia, Spain, and Kuwait.

The UN reports that its total humanitarian assistance for the people of Iraq is $2.2 billion, of which $1.2 billion is pledged or contributed from the international community and $1 billion is funded through the Oil for Food program.

In addition, several countries have pledged $800 million to UN programs. Nearly three dozen countries have made pledges or contributions to the renewal of Iraq.

There are now 34 foreign missions in Baghdad. Kuwait has reestablished relations with Iraq.

International pledges for reconstruction assistance are almost $3 billion, and an international conference to discuss additional funding for Iraq is scheduled for the fall.

More than 45 countries have offered military forces. The United Kingdom and Poland are each leading multinational divisions.

Numerous countries have contributed to the Coalition by providing basing and fly-over rights, as well as logistical support.

A total of 19 countries providing more than 13,000 troops in Iraq are supporting Operation Iraqi Freedom, and 14 countries are committed to deploying additional troops.

10 Signs of Cultural Rebirth:

Iraqi Olympic Committee is reconstituted without fear from Uday Hussein: The new President of the Free Iraq Olympic group said, "The Iraqi teams used to produce the champions of Asia in many sports. They have declined since the arrival of Uday. Now we want to rebuild them with the help of the international community." -- Sharar Haydar, one of Uday Hussein's former torture victims, The Guardian (London), May 15, 2003.

The Baghdad symphony is performing, and their concerts are also being televised. The conductor of the symphony said, "We're trying to show the world that Iraqis have a great culture." -- Hisham Sharaf, at a performance of the Baghdad Symphony, Agence France Presse, June 12, 2003.

Theaters are quickly reopening. In the words of one filmmaker: "You cannot imagine what it means for us to be here on this national stage, where everything we stand for was forbidden. Now it is ours."-- Oday Rashid, Los Angeles Times, May 5, 2003.

Religious rites are being reestablished. As one Iraqi said: "I can't express my feelings. All I feel is joy. This is the first time I've seen this (Shiite celebrations) for 30 years. Saddam forbade everything. He forced us underground." -- Sami Abbas, a Shia at the holy shrine of Kadhimiy, The Washington Post, April 16, 2003.

150 newspapers on the streets of Baghdad help get out the news of a free Iraq. Ali Jabar is quoted as saying, "Every day I buy a different

paper. I like them all." Says a newspaper editor: "We can't train staff fast enough. People are desperate here for a neutral free press after 30 years of a totalitarian state." -- Saad al-Bazzaz, editor of the Azzaman Daily in Baghdad, The Independent (London), July 8, 2003.

Satellite dishes are the most popular items for sale in Baghdad. "I want to watch all of the world, all channels in the world. I want to watch freedom." -- Mohammed al-Khayat, an Iraqi who just purchased his first satellite dish, The Baltimore Sun, April 26, 2003.

Banned books are now available in the market. A teacher selling books in Baghdad said: "Before, so many books were forbidden -- anything that didn't agree with the regime. Which means practically everything that was ever printed!" -- Imad Saad, Los Angeles Times, May 3, 2003.

Artists are free to display their works and poets are free to write. As one poet said: "For decades, we were used to watching ourselves. Now you can think with words. But to talk loudly and to think loudly takes time. Freedom needs practice, and it takes practice to be free." -- Mohammed Thamer, The Washington Post, April 22, 2003.

Education is being revitalized. As a member of Baghdad's city council pointed out, "We want to have a real education, to be a progressive country. Education is very important to the reconstruction of our society. If you want to civilize society, you must care about education." -- Al Sa'ad Majid al Musowi, The Chicago Tribune, July 31, 2003.

The Marshlands are being rehabilitated. In the words of one Iraqi, "We broke the dams when the Iraqi army left. We want to teach our children how to fish, how to move on the water again." -- Qasim Shalgan Lafta, a former fisherman who helped restore the water to the Iraqi wetlands that Saddam had destroyed, The Chicago Tribune, June 13, 2003.

10 Steps to Improve the Lives of Iraqi Women:

The Coalition is working to ensure that women play an important role in all parts of the government.

Three Iraqi women who are members of the new Governing Council are fully engaged in promoting the involvement of women in Iraq's future.

An esteemed former female Iraqi judge in the Ministry of Justice is undertaking a review of laws, legal practices, and the legal profession in Iraq for ways to increase equality and participation of women.

The Ministry of Interior conducted an assessment of the former Iraqi Police Force in early April. This resulted in a requirement to target recruitment of women and their inclusion in training offered at all academies. The program will become a reality August 15 when the recruiting drive begins with women as one of the groups targeted for selection.

The Ministry of Labor and Social Affairs has adopted a policy of equal access to services and benefits for all those eligible, and this policy will ultimately expand services as well as quality to larger numbers of Iraqis including women.

Iraqi women will have a role in the development of democracy and civil society. A senior administration official from the CPA Democracy and Governance team is conducting outreach activities to involve Iraqi women.

The Coalition team has held numerous meetings with Iraqi women from all walks of life to hear their concerns and to listen to their ideas for the future development of democracy in their country. In addition, the CPA has met with various women's groups and with international organizations regarding their ideas and efforts to meet the needs of Iraqi women.

The Coalition helped a group of Iraqi women conduct a conference July 9 that included workshops on the constitution and democracy, legal reform, education, health and social affairs, and economic and employment issues. More than 70 women attended, the majority of whom were Iraqi women experts in such fields as law, academia, medicine, and business.

Quotas restricting the entry of women into certain university courses have been raised or lifted altogether.

Iraqi women's organizations are being created to expand opportunities for women to improve their lives and those of their families.

10 Voices of Liberation:

"We want to have a real education, to be a progressive country. Education is very important to the reconstruction of our society. If you want to civilize society, you must care about education." -- Al Sa'ad Majid al Musowi, a businessman on Baghdad's city council, The Chicago Tribune, July 31, 2003.

"We have full freedom to print anything we want. The coalition doesn't interfere in our work but, of course, we have our own red lines." -- Ishtar el Yassiri, editor of the new satirical Iraqi newspaper Habez Bouz, Financial Times (London), July 31, 2003.

"The tension is reducing every day. We are seeing a change. People are starting to realize that the soldiers are not here to occupy Fallujah forever-they're here to help us rebuild." -- Taha Bedawi, mayor of Fallujah, The Washington Post, July 29, 2003.

"It's a chance to defend our country for our people. It's good to work with the American soldiers. They give us new training and a mutual respect." -- Omar Abdullah, a recruit for Mosul's newly formed joint security group, Associated Press, July 29, 2003.

"I want to serve a new Iraq." -- Shevin Majid, a former Kurdish fighter who is now a recruit in the Mosul joint security force,

Associated Press, July 29, 2003.

"More and more businessmen are coming to Iraq. It is a rich country and the Iraqi market is enormous. All the world wants to come and do business here." -- Captain Adel Khalaf, director of the port at Umm Qasr, Agence France Presse, July 27, 2003.

"For the first time I feel really free." -- Latif Yahia, Uday's former double, after hearing of Uday's death, Agence France Presse, July 26, 2003.

"The Iraqi people have got rid of two of the biggest criminals in history. Their victims and the sons of their victims, who lived for 35 years under oppression, are feeling proud and happy." -- Muwaffak al-Rubaiei, a member of the Iraqi Governing Council, Agence France Presse and Reuters, July 25, 2003.

"I couldn't show it to the people in the past because of the regime. Now I hang it up to show respect." -- Abbas Fadel, who displays a picture of his brother, tortured and murdered by Saddam Hussein, Knight Ridder, July 24, 2003.

"I can see that the American soldiers are free. In our old army, we were always under pressure and strict military orders. There was tough punishment." -- Raad Mamoud, a former Iraqi soldier, USA Today, July 21, 2003.

403. Re: "Mission Accomplished" At least 11 People Killed by Truck Bomb in Baghdad

Now that the cowardly murderers hiding in Iraq find that they can't
change the Will of the American People for Peace and Prosperity they
are taking to murdering their fellow Muslims. So its not a religious
war after all. Its just murder by masked blood thirsty killers.

I'm sure glad that President Bush is working hard to protect us!

and more Iraqis are freed from their fear and are volunteering their services and information.

Coalition forces continue to take the offensive against the remnants of the Ba'athist regime who are targeting the sites and symbols of reconstruction and stabilization successes.

An Iraqi Civil Defense Force will help U.S. and Coalition forces in rooting out Saddam loyalists and criminal gangs who have been attacking military forces and obstructing reconstruction efforts. Four thousand Iraqi militiamen will be trained by U.S. troops over the next eight weeks.

In Basra, 500 river police have been patrolling since June 19.

Some 148,000 U.S. service members and more than 13,000 Coalition troops from 19 countries are serving in Iraq.

Most of Iraq is calm and progress on the road to democracy and freedom not experienced in decades continues. Only in isolated areas are there still attacks.

10 Signs of Better Infrastructure and Basic Services:

Electricity: Electricity is now more equitably distributed and more stable, instead of, as during Saddam Hussein's rule, being supplied to Baghdad at the expense of the rest of the country. For the rest of 2003, $294 million is budgeted to improve electrical systems.

Water Systems: Water supply in many areas is now at pre-conflict levels. Over 2000 repairs have been made to 143 water networks, and water quality sampling has restarted. There are plans to add 450 million liters of capacity to Baghdad's system.

Healthcare: Iraqi hospitals are up and running, and healthcare, previously available only for Ba'athist elite, is now available to all Iraqis. Drugs are being supplied to hospitals and clinics, and medical worker salaries are being paid regularly, ensuring employees attend work. Vaccinations are available across the country, and anti-malarial spraying will take place this autumn.

Returning Refugees: Refugees began returning from Saudi Arabia and the United Arab Emirates. UNHCR and the Coalition are working together to ensure that groups of refugees in Jordan and Iran can return to Iraq safely and comfortably in the near future.

Revitalizing Oil Production and Distribution: Repairs and modernizations are being made to the antiquated and neglected oil production and distribution systems. Oil will provide the future wealth of the country but was severely misappropriated by the former regime.

Police: There are 6,000 police on the streets of Baghdad and 34 out of 60 police stations are currently operational. Throughout Iraq, there

are some 30,000 police patrolling the streets.

Road Repairs: Emergency road repairs, underway throughout Iraq now, will employ even more Iraqis in the coming weeks.

Airports: The Baghdad and Basra airports are ready to open, and the airport in Basra is expected to begin commercial operations in August. Several airlines are likely to start regular air service to Iraq.

Major Bridges: $4.3 million has been provided to repair the Tikrit Bridge; $4.4 million to rebuild the Al Mat Bridge; and $3.2 million to rebuild the Khazir Bridge.

Port at Umm Qasr: The port at Umm Qasr is open and functioning again, and customs and port authority agents are being trained.

10 Signs of Democracy:

A 25-member national Governing Council includes three women and Kurdish, Sunni, Christian, Turkmen, and Shi'ia representatives. The establishment of this body is a first and important move toward Iraqi self-government.

The Governing Council is creating a Preparatory Commission to write a constitution. After a constitution is approved, elections will lead to a fully sovereign Iraqi government.

There are municipal councils in all major cities and 85 percent of towns, enabling Iraqis to take responsibility for management of local matters like healthcare, water, and electricity.

Provisional councils have been formed in Najaf, Al Anbar, and Basra.

The Baghdad City Advisory Council was inaugurated on July 7, 2003. Its 37 members were selected by members of the city's nine district councils, who themselves were selected by Baghdad citizens in 88 neighborhoods throughout the city.

Local governance councils are robust in Basra and Umm Qasr, helping to identify areas for immediate humanitarian and reconstruction assistance.

The Office of Human Rights and Transitional Justice is working to locate missing persons, investigate, analyze, and exhume mass graves, archive past human rights abuses and promote civic education/public awareness about human rights.

To facilitate voluntary resolutions of property claims, the Property Reconciliation Facility is being created.

The Coalition is helping fund and train Iraqis wanting to create their own non-governmental organizations. These new NGOs include public policy think tanks and an association of former political prisoners.

More than 150 newspapers are now published in Iraq offering Iraqis access to many different kinds of information. Foreign publications, radio, and television broadcasts are also available.

10 Improvements in the Lives of Iraqi Children:

A "back to school" campaign delivered 1,500 kits with book bags, notebooks, pens and pencils that helped 120,000 students in Baghdad return to their classrooms in May 2003. In preparation for the new school year, 1.2 million kits for secondary school students and 4,000 kits for their schools including desks, chairs, blackboards, and bookshelves are arriving in Iraq.

Malnutrition contributed to high mortality rates in Iraq during Saddam's rule. The food aid for Iraq has continued to supply the public distribution system and has allowed the majority of Iraqis access to food rations. On July 15, the World Food Program reported that nearly 1.5 million metric tons of food, or more than the three months supply required to keep the distribution system operating, have been dispatched to Iraq. An additional 2.2 million metric tons of food will arrive by the end of October. These steps will contribute to reversing malnutrition.

To date, 22.3 million doses of measles, tuberculosis, hepatitis B, diphtheria, whooping cough, tetanus, and polio vaccines have been provided, enough to vaccinate 4.2 million children.

Nearly all Iraqi children have finished their exams from last year and are ready to start a new school year in the fall. All universities are reopened.

A $53 million program to rehabilitate more than 100 schools and clinics is underway. In the southern region, more than 50 schools are in various stages of rehabilitation. More than 600 schools will be in "like new" condition in time for the beginning of classes.

Five million revised math and science textbooks will be ready before the start of the school year.

Saddam Hussein's rhetoric is being removed from Iraqi schoolchildren's textbooks. In the words of Dunia Nabel, a teacher in Baghdad: "We want flowers and springtime in the texts, not rifles and tanks." (The Chicago Tribune, July 31, 2003).

Ten delivery rooms in hospitals and primary healthcare centers in Basra have been rehabilitated and stocked with essential drugs and medical supplies.

The juvenile institution for children that was the subject of reports of abuse and appalling conditions under Saddam Hussein has been replaced by a project run by UNICEF and NGOs. Seven orphanages have undergone major building renovations and training for staff.

Nearly 3,000 soccer balls were shipped on May 30 and another 60,000 balls on their way to Iraq through a private/public partnership and

the U.S. soccer community.

10 Signs of Economic Renewal:

A New Economy: A new Iraqi economy is being built on the principles of market economics, respect for the rule of law, and transparency.

Salaries: The CPA regularly pays salaries to those teachers, healthcare workers, soldiers, police, and other public sector employees who have returned to work. Payments of pensions and other emergency payments have also helped to avert a humanitarian crisis. Teachers' salaries, and other key employees' salaries, have increased four-fold over their pay under Saddam Hussein. Some 39,000 electrical workers are back at work. Other sectors show similar encouraging signs.

Commerce: The marketplace in Baghdad has many goods that were previously unavailable because of sanctions or because they were forbidden under the previous regime. Items such as satellite dishes are now readily available to Iraqis.

Banks: Banks are open in Baghdad. The CPA is working with Iraqis outside of Baghdad to open banks across the country as soon as possible. In addition, international interest in establishing an Iraqi trade bank has been strong, and proposals from foreign banks are under review for creating this trade facility.

Food: The CPA has purchased the upcoming wheat and barley crops, helping to meet the country's food needs while supporting farmers. These crops include over 600,000 metric tons of Iraqi wheat and more than 300,000 metric tons of Iraqi barley.

Loans for Entrepreneurs: A micro-credit facility is now being set up in the South. Credit facilities for the rest of the country are also planned. Iraq's two major banks will start making small and medium sized business loans to help Iraqi entrepreneurs restart their businesses.

Currency: A unified currency for Iraq has been announced. The exchange of old banknotes for new ones is set to begin October 15.

Iraqis' Savings: The dinar has maintained its value against the dollar, preserving the dinar-dominated savings of Iraqi citizens.

Natural Resources: Oil production is increasing, with daily production of crude averaging 1 million barrels in recent days.

Budget: The budget for the last six months of 2003 is now being executed, and the 2004 budget formulation process has begun. Of the 2003 budget, more than $400 million has been released to Ministries in July and August alone. The 2004 budget process, to be run by Iraqis, will target the most important priorities for the country's reconstruction and build on the spending commitments of the budget for the last six months of 2003.

10 Examples of International Support for the Renewal of Iraq:

The United Nations Secretary General Kofi Annan said of the Iraqi Governing Council: "[The Council's] formation is an important first step towards the full restoration of Iraqi sovereignty." The UN is supporting the renewal of Iraq through the Oil for Food program, and by providing humanitarian assistance, promoting human rights, and assisting the Iraqi Governing Council in rejoining the international community.

The United Nations Security Council passed, without opposition, Resolution 1483, lifting sanctions against the Iraqi regime.

The top 12 financial supporters for the renewal of Iraq are (in descending order): the United States, United Kingdom, Canada, Japan, Australia, Germany, Norway, Denmark, United Arab Emirates, Saudi Arabia, Spain, and Kuwait.

The UN reports that its total humanitarian assistance for the people of Iraq is $2.2 billion, of which $1.2 billion is pledged or contributed from the international community and $1 billion is funded through the Oil for Food program.

In addition, several countries have pledged $800 million to UN programs. Nearly three dozen countries have made pledges or contributions to the renewal of Iraq.

There are now 34 foreign missions in Baghdad. Kuwait has reestablished relations with Iraq.

International pledges for reconstruction assistance are almost $3 billion, and an international conference to discuss additional funding for Iraq is scheduled for the fall.

More than 45 countries have offered military forces. The United Kingdom and Poland are each leading multinational divisions.

Numerous countries have contributed to the Coalition by providing basing and fly-over rights, as well as logistical support.

A total of 19 countries providing more than 13,000 troops in Iraq are supporting Operation Iraqi Freedom, and 14 countries are committed to deploying additional troops.

10 Signs of Cultural Rebirth:

Iraqi Olympic Committee is reconstituted without fear from Uday Hussein: The new President of the Free Iraq Olympic group said, "The Iraqi teams used to produce the champions of Asia in many sports. They have declined since the arrival of Uday. Now we want to rebuild them with the help of the international community." -- Sharar Haydar, one of Uday Hussein's former torture victims, The Guardian (London), May 15, 2003.

The Baghdad symphony is performing, and their concerts are also being televised. The conductor of the symphony said, "We're trying to show the world that Iraqis have a great culture." -- Hisham Sharaf, at a performance of the Baghdad Symphony, Agence France Presse, June 12, 2003.

Theaters are quickly reopening. In the words of one filmmaker: "You cannot imagine what it means for us to be here on this national stage, where everything we stand for was forbidden. Now it is ours."-- Oday Rashid, Los Angeles Times, May 5, 2003.

Religious rites are being reestablished. As one Iraqi said: "I can't express my feelings. All I feel is joy. This is the first time I've seen this (Shiite celebrations) for 30 years. Saddam forbade everything. He forced us underground." -- Sami Abbas, a Shia at the holy shrine of Kadhimiy, The Washington Post, April 16, 2003.

150 newspapers on the streets of Baghdad help get out the news of a free Iraq. Ali Jabar is quoted as saying, "Every day I buy a different paper. I like them all." Says a newspaper editor: "We can't train staff fast enough. People are desperate here for a neutral free press after 30 years of a totalitarian state." -- Saad al-Bazzaz, editor of the Azzaman Daily in Baghdad, The Independent (London), July 8, 2003.

Satellite dishes are the most popular items for sale in Baghdad. "I want to watch all of the world, all channels in the world. I want to watch freedom." -- Mohammed al-Khayat, an Iraqi who just purchased his first satellite dish, The Baltimore Sun, April 26, 2003.

Banned books are now available in the market. A teacher selling books in Baghdad said: "Before, so many books were forbidden -- anything that didn't agree with the regime. Which means practically everything that was ever printed!" -- Imad Saad, Los Angeles Times, May 3, 2003.

Artists are free to display their works and poets are free to write. As one poet said: "For decades, we were used to watching ourselves. Now you can think with words. But to talk loudly and to think loudly takes time. Freedom needs practice, and it takes practice to be free." -- Mohammed Thamer, The Washington Post, April 22, 2003.

Education is being revitalized. As a member of Baghdad's city council pointed out, "We want to have a real education, to be a progressive country. Education is very important to the reconstruction of our society. If you want to civilize society, you must care about education." -- Al Sa'ad Majid al Musowi, The Chicago Tribune, July 31, 2003.

The Marshlands are being rehabilitated. In the words of one Iraqi, "We broke the dams when the Iraqi army left. We want to teach our children how to fish, how to move on the water again." -- Qasim Shalgan Lafta, a former fisherman who helped restore the water to the Iraqi wetlands that Saddam had destroyed, The Chicago Tribune, June 13, 2003.

10 Steps to Improve the Lives of Iraqi Women:

The Coalition is working to ensure that women play an important role in all parts of the government.

Three Iraqi women who are members of the new Governing Council are fully engaged in promoting the involvement of women in Iraq's future.

An esteemed former female Iraqi judge in the Ministry of Justice is undertaking a review of laws, legal practices, and the legal profession in Iraq for ways to increase equality and participation of women.

The Ministry of Interior conducted an assessment of the former Iraqi Police Force in early April. This resulted in a requirement to target recruitment of women and their inclusion in training offered at all academies. The program will become a reality August 15 when the recruiting drive begins with women as one of the groups targeted for selection.

The Ministry of Labor and Social Affairs has adopted a policy of equal access to services and benefits for all those eligible, and this policy will ultimately expand services as well as quality to larger numbers of Iraqis including women.

Iraqi women will have a role in the development of democracy and civil society. A senior administration official from the CPA Democracy and Governance team is conducting outreach activities to involve Iraqi women.

The Coalition team has held numerous meetings with Iraqi women from all walks of life to hear their concerns and to listen to their ideas for the future development of democracy in their country. In addition, the CPA has met with various women's groups and with international organizations regarding their ideas and efforts to meet the needs of Iraqi women.

The Coalition helped a group of Iraqi women conduct a conference July 9 that included workshops on the constitution and democracy, legal reform, education, health and social affairs, and economic and employment issues. More than 70 women attended, the majority of whom were Iraqi women experts in such fields as law, academia, medicine, and business.

Quotas restricting the entry of women into certain university courses have been raised or lifted altogether.

Iraqi women's organizations are being created to expand opportunities for women to improve their lives and those of their families.

10 Voices of Liberation:

"We want to have a real education, to be a progressive country. Education is very important to the reconstruction of our society. If you want to civilize society, you must care about education." -- Al Sa'ad Majid al Musowi, a businessman on Baghdad's city council, The Chicago Tribune, July 31, 2003.

"We have full freedom to print anything we want. The coalition doesn't interfere in our work but, of course, we have our own red lines." -- Ishtar el Yassiri, editor of the new satirical Iraqi newspaper Habez Bouz, Financial Times (London), July 31, 2003.

"The tension is reducing every day. We are seeing a change. People are starting to realize that the soldiers are not here to occupy Fallujah forever-they're here to help us rebuild." -- Taha Bedawi, mayor of Fallujah, The Washington Post, July 29, 2003.

"It's a chance to defend our country for our people. It's good to work with the American soldiers. They give us new training and a mutual respect." -- Omar Abdullah, a recruit for Mosul's newly formed joint security group, Associated Press, July 29, 2003.

"I want to serve a new Iraq." -- Shevin Majid, a former Kurdish fighter who is now a recruit in the Mosul joint security force, Associated Press, July 29, 2003.

"More and more businessmen are coming to Iraq. It is a rich country and the Iraqi market is enormous. All the world wants to come and do business here." -- Captain Adel Khalaf, director of the port at Umm Qasr, Agence France Presse, July 27, 2003.

"For the first time I feel really free." -- Latif Yahia, Uday's former double, after hearing of Uday's death, Agence France Presse, July 26, 2003.

"The Iraqi people have got rid of two of the biggest criminals in history. Their victims and the sons of their victims, who lived for 35 years under oppression, are feeling proud and happy." -- Muwaffak al-Rubaiei, a member of the Iraqi Governing Council, Agence France Presse and Reuters, July 25, 2003.

"I couldn't show it to the people in the past because of the regime. Now I hang it up to show respect." -- Abbas Fadel, who displays a picture of his brother, tortured and murdered by Saddam Hussein, Knight Ridder, July 24, 2003.

"I can see that the American soldiers are free. In our old army, we were always under pressure and strict military orders. There was tough punishment." -- Raad Mamoud, a former Iraqi soldier, USA Today, July 21, 2003.

Sorta like the Democrats insisting that Florida keep on counting the
votes over and over again until the liberals get the results they
want?

I've had that handle for a long time, I'm not about to drop it just
because "not very popular", I'm sorry, but I just dont see why I
should.

Sidewinder@DUHBYA.sucks (Sidewinder) wrote in message

Former Vice President Al Gore
Remarks to the New York Times
August 7, 2003

As reported by Jayson Blair

-AS PREPARED-

August 8, 2003, marks the hundredth day since the end of major combat operations in Iraq. Results in Iraq: 100 Days Toward Security and Freedom presents highlights of the successes shared by post-Saddam Iraqis and their partners in the renewal of their nation. Under the leadership of the Coalition Provisional Authority (CPA) and the new Iraqi Governing Council, major strides are being planned and made in three key areas: security, economic stability and growth, and democracy. As this report is issued, the CPA is working with Iraqis to implement a strategic plan with measurable goals. Outside observers and coalition leaders agree that much remains to be done to restore order and bring prosperity to a brutalized society and an infrastructure suffering from decades of malign neglect. The steps toward sovereignty and democracy will be difficult and require patience and time. Substantial progress is being made on all fronts. As President Bush said last week, the "success of a free Iraq will ... demonstrate to other countries in that region that national prosperity and dignity are found in representative government and free institutions.... As freedom advances in the Middle East, those societies will be less likely to produce ideologies of hatred and produce recruits for terror." This report focuses on 10 areas where the liberation of Iraq has improved the lives of Iraqis and the safety and security of the world. Some examples in this report include:

For the first time in the lives of most Iraqis, a representative government is being established and human rights and freedom are being enshrined.

Nearly 3 dozen countries are contributing financially to the renewal of Iraq, and 19 countries are providing personnel for Operation Iraqi Freedom.

The food distribution system is functioning, based on equitable needs rather than cronyism.

Nearly all Iraqi children have finished exams from last year. All universities are open.

A $53 million program to rehabilitate more than 100 schools and clinics is underway.

10 Ways the Liberation of Iraq Supports the War on Terror:

With the fall of Saddam Hussein's regime, Iraq is no longer a state sponsor of terror. According to State Department reports on terrorism, before the removal of Saddam's regime, Iraq was one of seven state sponsors of terror.

Saddam Hussein's regime posed a threat to the security of the United States and the world. With the removal of Saddam Hussein's regime, a leader who pursued, used, and possessed weapons of mass destruction is no longer in power.

Saddam Hussein would not uphold his international commitments, and now that he is no longer in power, the world is safe from this tyrant. The old Iraqi regime defied the international community and seventeen UN resolutions for twelve years and gave every indication that it would never disarm and never comply with the just demands of the world.

A senior al Qaida terrorist, now detained, who had been responsible for al Qaida training camps in Afghanistan, reports that al Qaida was intent on obtaining WMD assistance from Iraq. According to a credible, high-level al Qaida source, Usama Bin Laden and deceased al Qaida leader Muhammad Atif did not believe that al Qaida labs in Afghanistan were capable of manufacturing chemical and biological weapons, so they turned to Iraq for assistance. Iraq agreed to provide chemical and biological weapons training for two al Qaida associates starting in December 2000.

Senior al Qaida associate Abu Musab al-Zarqawi came to Baghdad in May 2002 for medical treatment along with approximately two dozen al Qaida terrorist associates. This group stayed in Baghdad and other parts of Iraq and plotted terrorist attacks around the world.

A safe haven in Iraq belonging to Ansar al-Islam -- a terrorist group closely associated with Zarqawi and al Qaida -- was destroyed during Operation Iraqi Freedom. In March 2003, during a raid on the compound controlled by the terrorists in northeastern Iraq, a cache of documents was discovered, including computer discs and foreign passports belonging to fighters from various Middle East nationalities.

The al Qaida affiliate Ansar al-Islam is known to still be present in Iraq. Such terrorist groups are now plotting against U.S. forces in Iraq.

Law enforcement and intelligence operations have disrupted al Qaida associate Abu Musab Zarqawi's poison plotting in France, Britain, Spain, Italy, Germany, and Russia. The facilities in Northern Iraq, set up by Zarqawi and Ansar al-Islam were, before the war, an al Qaida's poisons/toxins laboratory.

Abu Musa Zarqawi, the al Qaida associate with direct links to Iraq, oversaw those responsible for the assassination of USAID officer Laurence Foley in Amman, Jordan last October.

Saddam Hussein's Iraq provided material assistance to Palestinian terrorist groups, including the Popular Front for the Liberation of Palestine-General Command, HAMAS, and the Palestine Islamic Jihad, according to a State Department report. This included paying the families of Palestinian suicide bombers, according to testimonials from Palestinians and cancelled checks. Also, according to State Department reports, terrorist groups the Iranian Mujahedin-e-Khalq and the Abu Nidal organization were protected by the Iraqi regime protected by the Iraqi regime.

10 Signs of Better Security:

The Coalition is working with Iraqis to improve internal security throughout the country. While the security situation is improving, dangerous remnants of the former regime and others continue to target progress and success.

New Iraqi army and police forces are being recruited, trained, and equipped. Some 1,200 Iraqis will be trained this year for the new Iraqi army, and in two years, 40,000 army recruits will be trained.

Fifty-eight of 89 Iraqi cities have hired police forces. In total, 34,000 Iraqis are employed in patrolling the streets of their country, and of these, 30,000 Iraqis are currently patrolling with coalition forces.

More than 8,200 tons of ammunition, thousands of AK-47s, grenades, and other weapons have been seized throughout Iraq -- much of which was stored by the Hussein regime in hospitals, schools, and mosques.

The CPA has hired more than 11,000 Iraqis to guard key facilities around the country.

Coalition forces, with information from an Iraqi, conducted operations that lead to the deaths of Uday and Qusay Hussein following their refusal to surrender. To date, 37 of the top 55 most wanted Iraqis have been captured or killed. With the deaths of Uday and Qusay, more and more Iraqis are freed from their fear and are volunteering their services and information.

Coalition forces continue to take the offensive against the remnants of the Ba'athist regime who are targeting the sites and symbols of reconstruction and stabilization successes.

An Iraqi Civil Defense Force will help U.S. and Coalition forces in rooting out Saddam loyalists and criminal gangs who have been attacking military forces and obstructing reconstruction efforts. Four thousand Iraqi militiamen will be trained by U.S. troops over the next eight weeks.

In Basra, 500 river police have been patrolling since June 19.

Some 148,000 U.S. service members and more than 13,000 Coalition troops from 19 countries are serving in Iraq.

Most of Iraq is calm and progress on the road to democracy and freedom not experienced in decades continues. Only in isolated areas are there still attacks.

10 Signs of Better Infrastructure and Basic Services:

Electricity: Electricity is now more equitably distributed and more stable, instead of, as during Saddam Hussein's rule, being supplied to Baghdad at the expense of the rest of the country. For the rest of 2003, $294 million is budgeted to improve electrical systems.

Water Systems: Water supply in many areas is now at pre-conflict levels. Over 2000 repairs have been made to 143 water networks, and water quality sampling has restarted. There are plans to add 450 million liters of capacity to Baghdad's system.

Healthcare: Iraqi hospitals are up and running, and healthcare, previously available only for Ba'athist elite, is now available to all Iraqis. Drugs are being supplied to hospitals and clinics, and medical worker salaries are being paid regularly, ensuring employees attend work. Vaccinations are available across the country, and anti-malarial spraying will take place this autumn.

Returning Refugees: Refugees began returning from Saudi Arabia and the United Arab Emirates. UNHCR and the Coalition are working together to ensure that groups of refugees in Jordan and Iran can return to Iraq safely and comfortably in the near future.

Revitalizing Oil Production and Distribution: Repairs and modernizations are being made to the antiquated and neglected oil production and distribution systems. Oil will provide the future wealth of the country but was severely misappropriated by the former regime.

Police: There are 6,000 police on the streets of Baghdad and 34 out of 60 police stations are currently operational. Throughout Iraq, there are some 30,000 police patrolling the streets.

Road Repairs: Emergency road repairs, underway throughout Iraq now, will employ even more Iraqis in the coming weeks.

Airports: The Baghdad and Basra airports are ready to open, and the airport in Basra is expected to begin commercial operations in August. Several airlines are likely to start regular air service to Iraq.

Major Bridges: $4.3 million has been provided to repair the Tikrit Bridge; $4.4 million to rebuild the Al Mat Bridge; and $3.2 million to rebuild the Khazir Bridge.

Port at Umm Qasr: The port at Umm Qasr is open and functioning again, and customs and port authority agents are being trained.

10 Signs of Democracy:

A 25-member national Governing Council includes three women and Kurdish, Sunni, Christian, Turkmen, and Shi'ia representatives. The establishment of this body is a first and important move toward Iraqi self-government.

The Governing Council is creating a Preparatory Commission to write a constitution. After a constitution is approved, elections will lead to a fully sovereign Iraqi government.

There are municipal councils in all major cities and 85 percent of towns, enabling Iraqis to take responsibility for management of local matters like healthcare, water, and electricity.

Provisional councils have been formed in Najaf, Al Anbar, and Basra.

The Baghdad City Advisory Council was inaugurated on July 7, 2003. Its 37 members were selected by members of the city's nine district councils, who themselves were selected by Baghdad citizens in 88 neighborhoods throughout the city.

Local governance councils are robust in Basra and Umm Qasr, helping to identify areas for immediate humanitarian and reconstruction assistance.

The Office of Human Rights and Transitional Justice is working to locate missing persons, investigate, analyze, and exhume mass graves, archive past human rights abuses and promote civic education/public awareness about human rights.

To facilitate voluntary resolutions of property claims, the Property Reconciliation Facility is being created.

The Coalition is helping fund and train Iraqis wanting to create their own non-governmental organizations. These new NGOs include public policy think tanks and an association of former political prisoners.

More than 150 newspapers are now published in Iraq offering Iraqis access to many different kinds of information. Foreign publications, radio, and television broadcasts are also available.

10 Improvements in the Lives of Iraqi Children:

A "back to school" campaign delivered 1,500 kits with book bags, notebooks, pens and pencils that helped 120,000 students in Baghdad return to their classrooms in May 2003. In preparation for the new school year, 1.2 million kits for secondary school students and 4,000 kits for their schools including desks, chairs, blackboards, and bookshelves are arriving in Iraq.

Malnutrition contributed to high mortality rates in Iraq during Saddam's rule. The food aid for Iraq has continued to supply the public distribution system and has allowed the majority of Iraqis access to food rations. On July 15, the World Food Program reported

that nearly 1.5 million metric tons of food, or more than the three months supply required to keep the distribution system operating, have been dispatched to Iraq. An additional 2.2 million metric tons of food will arrive by the end of October. These steps will contribute to reversing malnutrition.

To date, 22.3 million doses of measles, tuberculosis, hepatitis B, diphtheria, whooping cough, tetanus, and polio vaccines have been provided, enough to vaccinate 4.2 million children.

Nearly all Iraqi children have finished their exams from last year and are ready to start a new school year in the fall. All universities are reopened.

A $53 million program to rehabilitate more than 100 schools and clinics is underway. In the southern region, more than 50 schools are in various stages of rehabilitation. More than 600 schools will be in "like new" condition in time for the beginning of classes.

Five million revised math and science textbooks will be ready before the start of the school year.

Saddam Hussein's rhetoric is being removed from Iraqi schoolchildren's textbooks. In the words of Dunia Nabel, a teacher in Baghdad: "We want flowers and springtime in the texts, not rifles and tanks." (The Chicago Tribune, July 31, 2003).

Ten delivery rooms in hospitals and primary healthcare centers in Basra have been rehabilitated and stocked with essential drugs and medical supplies.

The juvenile institution for children that was the subject of reports of abuse and appalling conditions under Saddam Hussein has been replaced by a project run by UNICEF and NGOs. Seven orphanages have undergone major building renovations and training for staff.

Nearly 3,000 soccer balls were shipped on May 30 and another 60,000 balls on their way to Iraq through a private/public partnership and the U.S. soccer community.

10 Signs of Economic Renewal:

A New Economy: A new Iraqi economy is being built on the principles of market economics, respect for the rule of law, and transparency.

Salaries: The CPA regularly pays salaries to those teachers, healthcare workers, soldiers, police, and other public sector employees who have returned to work. Payments of pensions and other emergency payments have also helped to avert a humanitarian crisis. Teachers' salaries, and other key employees' salaries, have increased four-fold over their pay under Saddam Hussein. Some 39,000 electrical workers are back at work. Other sectors show similar encouraging signs.

Commerce: The marketplace in Baghdad has many goods that were previously unavailable because of sanctions or because they were forbidden under the previous regime. Items such as satellite dishes are now readily available to Iraqis.

Banks: Banks are open in Baghdad. The CPA is working with Iraqis outside of Baghdad to open banks across the country as soon as possible. In addition, international interest in establishing an Iraqi trade bank has been strong, and proposals from foreign banks are under review for creating this trade facility.

Food: The CPA has purchased the upcoming wheat and barley crops, helping to meet the country's food needs while supporting farmers. These crops include over 600,000 metric tons of Iraqi wheat and more than 300,000 metric tons of Iraqi barley.

Loans for Entrepreneurs: A micro-credit facility is now being set up in the South. Credit facilities for the rest of the country are also planned. Iraq's two major banks will start making small and medium sized business loans to help Iraqi entrepreneurs restart their businesses.

Currency: A unified currency for Iraq has been announced. The exchange of old banknotes for new ones is set to begin October 15.

Iraqis' Savings: The dinar has maintained its value against the dollar, preserving the dinar-dominated savings of Iraqi citizens.

Natural Resources: Oil production is increasing, with daily production of crude averaging 1 million barrels in recent days.

Budget: The budget for the last six months of 2003 is now being executed, and the 2004 budget formulation process has begun. Of the 2003 budget, more than $400 million has been released to Ministries in July and August alone. The 2004 budget process, to be run by Iraqis, will target the most important priorities for the country's reconstruction and build on the spending commitments of the budget for the last six months of 2003.

10 Examples of International Support for the Renewal of Iraq:

The United Nations Secretary General Kofi Annan said of the Iraqi Governing Council: "[The Council's] formation is an important first step towards the full restoration of Iraqi sovereignty." The UN is supporting the renewal of Iraq through the Oil for Food program, and by providing humanitarian assistance, promoting human rights, and assisting the Iraqi Governing Council in rejoining the international community.

The United Nations Security Council passed, without opposition, Resolution 1483, lifting sanctions against the Iraqi regime.

The top 12 financial supporters for the renewal of Iraq are (in descending order): the United States, United Kingdom, Canada, Japan, Australia, Germany, Norway, Denmark, United Arab Emirates, Saudi

Arabia, Spain, and Kuwait.

The UN reports that its total humanitarian assistance for the people of Iraq is $2.2 billion, of which $1.2 billion is pledged or contributed from the international community and $1 billion is funded through the Oil for Food program.

In addition, several countries have pledged $800 million to UN programs. Nearly three dozen countries have made pledges or contributions to the renewal of Iraq.

There are now 34 foreign missions in Baghdad. Kuwait has reestablished relations with Iraq.

International pledges for reconstruction assistance are almost $3 billion, and an international conference to discuss additional funding for Iraq is scheduled for the fall.

More than 45 countries have offered military forces. The United Kingdom and Poland are each leading multinational divisions.

Numerous countries have contributed to the Coalition by providing basing and fly-over rights, as well as logistical support.

A total of 19 countries providing more than 13,000 troops in Iraq are supporting Operation Iraqi Freedom, and 14 countries are committed to deploying additional troops.

10 Signs of Cultural Rebirth:

Iraqi Olympic Committee is reconstituted without fear from Uday Hussein: The new President of the Free Iraq Olympic group said, "The Iraqi teams used to produce the champions of Asia in many sports. They have declined since the arrival of Uday. Now we want to rebuild them with the help of the international community." -- Sharar Haydar, one of Uday Hussein's former torture victims, The Guardian (London), May 15, 2003.

The Baghdad symphony is performing, and their concerts are also being televised. The conductor of the symphony said, "We're trying to show the world that Iraqis have a great culture." -- Hisham Sharaf, at a performance of the Baghdad Symphony, Agence France Presse, June 12, 2003.

Theaters are quickly reopening. In the words of one filmmaker: "You cannot imagine what it means for us to be here on this national stage, where everything we stand for was forbidden. Now it is ours."-- Oday Rashid, Los Angeles Times, May 5, 2003.

Religious rites are being reestablished. As one Iraqi said: "I can't express my feelings. All I feel is joy. This is the first time I've seen this (Shiite celebrations) for 30 years. Saddam forbade everything. He forced us underground." -- Sami Abbas, a Shia at the holy shrine of Kadhimiy, The Washington Post, April 16, 2003.

150 newspapers on the streets of Baghdad help get out the news of a free Iraq. Ali Jabar is quoted as saying, "Every day I buy a different paper. I like them all." Says a newspaper editor: "We can't train staff fast enough. People are desperate here for a neutral free press after 30 years of a totalitarian state." -- Saad al-Bazzaz, editor of the Azzaman Daily in Baghdad, The Independent (London), July 8, 2003.

Satellite dishes are the most popular items for sale in Baghdad. "I want to watch all of the world, all channels in the world. I want to watch freedom." -- Mohammed al-Khayat, an Iraqi who just purchased his first satellite dish, The Baltimore Sun, April 26, 2003.

Banned books are now available in the market. A teacher selling books in Baghdad said: "Before, so many books were forbidden -- anything that didn't agree with the regime. Which means practically everything that was ever printed!" -- Imad Saad, Los Angeles Times, May 3, 2003.

Artists are free to display their works and poets are free to write. As one poet said: "For decades, we were used to watching ourselves. Now you can think with words. But to talk loudly and to think loudly takes time. Freedom needs practice, and it takes practice to be free." -- Mohammed Thamer, The Washington Post, April 22, 2003.

Education is being revitalized. As a member of Baghdad's city council pointed out, "We want to have a real education, to be a progressive country. Education is very important to the reconstruction of our society. If you want to civilize society, you must care about education." -- Al Sa'ad Majid al Musowi, The Chicago Tribune, July 31, 2003.

The Marshlands are being rehabilitated. In the words of one Iraqi, "We broke the dams when the Iraqi army left. We want to teach our children how to fish, how to move on the water again." -- Qasim Shalgan Lafta, a former fisherman who helped restore the water to the Iraqi wetlands that Saddam had destroyed, The Chicago Tribune, June 13, 2003.

10 Steps to Improve the Lives of Iraqi Women:

The Coalition is working to ensure that women play an important role in all parts of the government.

Three Iraqi women who are members of the new Governing Council are fully engaged in promoting the involvement of women in Iraq's future.

An esteemed former female Iraqi judge in the Ministry of Justice is undertaking a review of laws, legal practices, and the legal profession in Iraq for ways to increase equality and participation of women.

The Ministry of Interior conducted an assessment of the former Iraqi Police Force in early April. This resulted in a requirement to target recruitment of women and their inclusion in training offered at all academies. The program will become a reality August 15 when the recruiting drive begins with women as one of the groups targeted for

selection.

The Ministry of Labor and Social Affairs has adopted a policy of equal access to services and benefits for all those eligible, and this policy will ultimately expand services as well as quality to larger numbers of Iraqis including women.

Iraqi women will have a role in the development of democracy and civil society. A senior administration official from the CPA Democracy and Governance team is conducting outreach activities to involve Iraqi women.

The Coalition team has held numerous meetings with Iraqi women from all walks of life to hear their concerns and to listen to their ideas for the future development of democracy in their country. In addition, the CPA has met with various women's groups and with international organizations regarding their ideas and efforts to meet the needs of Iraqi women.

The Coalition helped a group of Iraqi women conduct a conference July 9 that included workshops on the constitution and democracy, legal reform, education, health and social affairs, and economic and employment issues. More than 70 women attended, the majority of whom were Iraqi women experts in such fields as law, academia, medicine, and business.

Quotas restricting the entry of women into certain university courses have been raised or lifted altogether.

Iraqi women's organizations are being created to expand opportunities for women to improve their lives and those of their families.

10 Voices of Liberation:

"We want to have a real education, to be a progressive country. Education is very important to the reconstruction of our society. If you want to civilize society, you must care about education." -- Al Sa'ad Majid al Musowi, a businessman on Baghdad's city council, The Chicago Tribune, July 31, 2003.

"We have full freedom to print anything we want. The coalition doesn't interfere in our work but, of course, we have our own red lines." -- Ishtar el Yassiri, editor of the new satirical Iraqi newspaper Habez Bouz, Financial Times (London), July 31, 2003.

"The tension is reducing every day. We are seeing a change. People are starting to realize that the soldiers are not here to occupy Fallujah forever-they're here to help us rebuild." -- Taha Bedawi, mayor of Fallujah, The Washington Post, July 29, 2003.

"It's a chance to defend our country for our people. It's good to work with the American soldiers. They give us new training and a mutual respect." -- Omar Abdullah, a recruit for Mosul's newly formed joint security group, Associated Press, July 29, 2003.

"I want to serve a new Iraq." -- Shevin Majid, a former Kurdish fighter who is now a recruit in the Mosul joint security force, Associated Press, July 29, 2003.

"More and more businessmen are coming to Iraq. It is a rich country and the Iraqi market is enormous. All the world wants to come and do business here." -- Captain Adel Khalaf, director of the port at Umm Qasr, Agence France Presse, July 27, 2003.

"For the first time I feel really free." -- Latif Yahia, Uday's former double, after hearing of Uday's death, Agence France Presse, July 26, 2003.

"The Iraqi people have got rid of two of the biggest criminals in history. Their victims and the sons of their victims, who lived for 35 years under oppression, are feeling proud and happy." -- Muwaffak al-Rubaiei, a member of the Iraqi Governing Council, Agence France Presse and Reuters, July 25, 2003.

"I couldn't show it to the people in the past because of the regime. Now I hang it up to show respect." -- Abbas Fadel, who displays a picture of his brother, tortured and murdered by Saddam Hussein, Knight Ridder, July 24, 2003.

"I can see that the American soldiers are free. In our old army, we were always under pressure and strict military orders. There was tough punishment." -- Raad Mamoud, a former Iraqi soldier, USA Today, July 21, 2003.

407. buying 780 or 245xlt

You will be missing a bunch. You need to ask your self if you want to
carry the radio around with you or just use it in you house or car. The
780 is a whole lot more radio then the 245.

Agree there, I bought both (stung the savings account a little but, but what
the hey I can always put the money back later). I keep the 245XLT with me
all the time, and use a car kit to feed the sound from the 245XLT to the
vehicle's stereo. It sits in the cup holder. The 245XLT is very portable,
even had it in the camera bag with the antenna pointing out, and the sound
fed
into portable CD headphones.

It can be broken down easily and slipped into the glove box. I spent extra
at a radio shop in Seattle and got a very good rubber duckie for it.

I've had the 780XLT with me on longer trips. It's good as more frequencies
can be packed into a specific channel bank
("1" for fire/police, 3 for aviation, 4 for railways, 5 for marine, etc.)

The problem with the 245XLT is that it doesn't have alpha numeric display as
does the 780XLT. Too bad too, sure wish
Uniden had put in that feature when the 245XLT went to its final design
approval.

Then 780XLT will require some tuck in cables to a BNC connector that will
fit the cable going from the antenna. I spent some
time placing cable in the vehicle for a magnetic mounted antenna. If done
right the cabling won't be butt ugly and you'll end up
with a spffy clean clean installation.

The 780XLT is 200 ch more (roughly 2 more banks) than the 245, but for me,
the 780XLT is great as a base station radio.

I'd say the best thing if you want to move your scanner around, I'd go for
the 245XLT, and then later on get yourself a

780XLT. In each case once you've unpacked the 245XLT get yourself programming software if you want to change around the scanner on trips. It also helps to clean the scanner of unused frequencies.

The digital models? Unless there is active APCO-25 radio activity in your area, I wouldn't bother even with the additional channel capacity. The digital models will not work on Pro-Voice based radio no matter how hard you press the buttons and grunt and grit your teeth or grovel to the gods.

> Wall clamps ... it all depends on how high your house is at the peak ...

The roof is relatively flat, no real way to secure it to anything other than the wood trim on the roof line. The guy wires would be a possibility, but only if I moved the mast out into the middle of the yard, and that's not going to happen for a number of reasons.

I guess I could go with a shorter mast. I'm just looking to get a couple of scanner antennas out of the house and into the air, and I figured while I was up there I'd put up a MURS and 2 meter antenna as well. I suppose as long as I clear the roof I'll be happy, but I'd really like to go as high as possible/practical without having to use external supports ala guy wires etc.

> especially since you own SEVEN uniden bc780's! ;)

Yes I very well know of this mod but why in the heck do I want to distroy a good scanner? Remember 99% of my listening is MilAir. The 780XLT cell phone mod puts cell phone trash right in the middle of the band I really care about. I do care about Cell Phones!

The cell phone mod elimiates the IF rejection making cell phone images appear in the 300-400 range.

Here in Wisconsin, there's lots of police action to be heard without trunk tracking, the 154mhz range is still full of signals and the fact that the big cities like Milwaukee have moved to 800mhz, just makes the smaller towns and surrounding counties easier to be heard.

The 800mhz trunked stuff out of Milwaukee can still be heard without trunking scanner, it's just harder to follow a series of transmissions, but with most of the communications being 'one liners' anyway, no big whoop. I just type in the trunked frequency and listen anyway. Out of 10 transmissions, I'll get 7 police, one municipal bus, and maybe 2 EMS. Fire is still not trunked.

I thought you said there was no way to mod the 780 for cell. Thats the
only reason I posted about the artical. Anyway I agree with you on not
wanting to destroy your radio. Thats one of the reasons I didnt do the
mod to mine. By the way George where has your milair logs been? Kinda
missing them :)

Jason, You can get a nice 36' mast from radioshack for 69.99. They also
have guy wires to help hold it up. Thats the same setup that I have and
it has seen 60mph winds. I placed the mast at the side of the house and
ran 3 guy wires at about 18' and 3 at about 27' to the corners of my
roof.

Sorry to jump in on this, but I run a private weather station and of course have the tall mast. So anchoring and grounding of it are important. There is a company that has several ways to mount the mast. This is their site https://www.wxsystems.com/index.shtml . Click on weather stations then to mast mounting and you will see several ideas. The mast I use is from Radio shack and their tripod as well. On my site I have how I used the ground stakes (from Menards) to get stability. So far it hasn't blown away in the past 3 years.
http://home.mchsi.com/~toubes1/stationinformation.htm

But you need stability for guy wires, unless you use wxsystems mount to the house and of course do get the ground wire for the mast . If you are putting something up in the air , the ground is necessary. Be careful of electric wires.

Well I really don't call it a mod since its more than snipping a diode
and in my opinion distroys a good radio. That's why when someone askes
me if there's a mod I say no. That and the fact that Cell phone
listening isn't of any interest to me...

Been doing a lot of fishing and some traveling to various parts of
Florida so I haven't had much time to log. I usually travel with 3
scanners with me, all scanning the more active MilAir freqs of the areas
I'm in. But its hard to write down freqs, times, callsigns and details
while driving 75 MPH on Interstate 4 or Interstate 95 here in Florida....

I've made no accusations to apologize for, Mark. I've simply pointed to the facts about WMD in Iraq - there doesn't appear to have been any. Likewise, I've made no statements to be accountable for. I've simply questioned the statements made by others and pondered what it means for this country if those statements turn out to have been wrong. And, yes, the president should always have a much greater burden of accountability for what he says - his statements can lead to wars and death.

I agree with Doug. It sounds like you're hearing a signal in a mode other than what your scanner is set to receive. I suspect you're trying to listen to an AM signal with an FM scanner, but it could be one of the others modes. If your scanner can receive other modes, try listening to the signal using one of those other modes. If your scanner cannot receive other modes, you'll have to live with what you're hearing now.

I don't see why you wouldn't be able to do so. Ask around at some of the local radio stores to learn which scanners they recommend to listen to police broadcasts. After you have a few scanners in mind, ask on the internet to see which one others recommend.

> I've had that handle for a long time, I'm not about

If I ever need to get to the top of it I can get on the roof and collapse the top 2 sections(real easy to do)to make any changes I need to. I have a scantenna and a tv antenna on it. Sorry I don't have a site setup with any pictures on it. I guess I could snap a picture of it tomorrow and upload it to my web space if you really want to see it. If you go to RadioShacks website you will get a better idea of what it looks like and can read more about it. Here is a link to it http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F003%5F001%5F003%5F004&product%5Fid=15%2D5067

WHOA!! With a "TV screen" on it? That's a first for me. I don't think it is
a radio scanner you are talking about. What a concept though, that WOULD
definitely be a *hot seller* here in the pursuit capital of Los
Angeles....LOL!

As for recommending one, I can't help you there as there are just too many
models on the market that I have not had the pleasure of reviewing......

Help!
After deciding to get into scanning as a hobby, I bought a brand new Pro-92 scanner, had it clipped onto the back of my belt and fell backwards onto it during a hike on Saturday. The face plate has been scratched and many of the buttons near the bottom have been ripped or torn off. Any suggestions where I can get a new face plate and button pads to go under it?

Thanks,
CC

Buy the time you get done screwing around welding and digging and bending and fitting you could have gone down to your local HAM/CB or TV shop and pickedup 3 or 4 10' sections of tower mast and done it right :-) Regular TV tower mast runs about $35.00 a section and is over kill for scanner antennas. I have 4 sections up The first one is 3 feet in the ground and at the 14 foot mark the 2nd is clamped to the house. So my main is up 37' of tower and then 10' of 1 1/2" regular pipe mast. It's been standing for 14 years now and the only thing I've done to it was drop it and weld a 6 foot cross bar on it so I could put up 2 more antennas :-) now I have 3 up, i.e. 2 Scantenna's on the cross beam and a Antenna Warehouse Log-Periodic Scanner Beam up on top over a Yaesu G-450XL rotor. I've been thinking about cuting the tower off at the base and welding a set of hinges there so I can lay it over to work on "STUFF" :-)

400MHz?? Verizon runs a split digital system here in PA, i.e. 851MHz or
853MHz something is the transmit and 1.68GHz or 1.86GHz is the receive side
and after spending 30min looking for a mod that would let you listen to
cell on a 400MHz range we found nothing, notha nutin zip 0. Nor do we know
of any mod that would let you get a split digital single and convert it to
400MHz and convert the digital to analog so you could understand what folks
are saying. 11100 01011 010101 00001111 00011 0001111 010101

Actually sometime ago there was an article that appeared on one of the magazines (not Pop Comm, not Monitoring Times, the other one that I can't remember the name of). The article described a mod which would remove filtering and allow 800-900 MHz signals to be heard as images in the 400 MHz range on the scanner.... I believe that was what he was refering too.

However you'll hear a lot of buzzing sound as in many areas the amount of analog traffic is being reduced. Here in Central FL you'll still hear some analog but only about 1 out of 15 signals will be analog. And I'm actually surpised its still that high but it is....

what would be the best method to finding out what system a police
force uses?

i assume asking them would result in no answer. what about the freedom
for information act? would that allow me to find out?

short of breaking in to a squad car and stealing the radio, whats the
best method to go about finding out?

thanks.

Is anyone familier with the Motorola Maxtrac radios. I see some of them on E-bay for sale around the 150 dollar range but nobody puts what frequency they use. Can they be programmed? Thanks for any info on these units.

hello fellow newsgroupies and tim
i apologize for my statement concerning my paying 29.00 for the scantenna. i sincerely recalled it was that price and did not mean harm when i placed my post..
but i am old and the doctors continually change my meds..:-) so i do make mistakes.
Tim from antenna warehouse corrected me it was 40.00 vs. the price i stated before.
the differences in ads on ebay at that time was 37.00 not including shipping and 40.00 shipping included.
I thank Tim for correcting me and ask that others please forgive for any inconvenience i may have caused...
as for the reputation of antennawarehouse it is nothing but the finest place to do business with.....they will give you the best price around on their products

Ok i finally understand trunking thanks to all who helped, but i need one more thing answered its about the ecads trunking
the halton region uses this and i know who have to program the freq in order but they have 3 transmiter sites dose that meen I have to use 3 seperate banks.

System: Halton, Regional Municipality of
County: Halton
Type: G.E. Ericsson
Use: Unknown

Frequencies:
Milton/Halton Hills Site --Logical Channel Numbering:

859.6125 (1) 866.1125 (2) 866.31215 (3) 866.8125 (4) 867.3125 (5)
862.2625 (6)

Oakville Site -- Logical Channel Numbering:
862.3125 (1) 866.0625 (2) 866.5625 (3) 867.0625 (4) 867.5625 (5)
868.0625 (6)

Burlington Site -- Logical Channel Numbering:
861.2625 (1) 861.5125 (2) 861.7625 (3) 862.0125 (4) 859.3625 (5)
857.1125 (6)

Where can I find an inexpensive, freestanding (or lightly guyed), antenna tower? It doesn't have to support a lot of weight - a couple of small 2m radio antennas and one or two scanner antennas. And it also doesn't have to be very tall - thirty to forty feet would be just fine. I'm sure others would be interested in this also.

My apologies to you, Dwight. On 2003-08-03 at 00:04:53 PST you
posted:

"Our president repeatedly said those weapons...
existed. ... and no such weapons have been found in Iraq .... At
this point, it does appear our government lied to us and the world."

It seemed to me, Dwight, that you clearly were calling President Bush
a liar. However, If you subsequently claim that it was not your
intent to call President Bush a liar then I will take you at your word
and I stand corrected.

Theoretically speaking, if President Bush was lying then would it also
mean the UK intelligence community lied as well? And, does it also
mean that the 16 members of the UN security council all lied when they
voted unanimously for resolution 1441 stating that Iraq does indeed
have weapons of mass destruction?

> force uses?

Your first stop should be:

http://www.trunkedradio.net/

This web site has everything related to scanner radio, and from spelunking
around you should come up with an answer.
There's information pages, plus a forum where you can ask questions. The web
site is good for North America

There may be local scanner web sites in your area, too. They'll be able to
tell you if they exist in your area what protocol
they use. A local radio shop that sells scanners will also be able to tell
you as well.

> i assume asking them would result in no answer. what about the freedom
> for information act? would that allow me to find out?

It's a bit involved (if you're in Canada) to go that route and unless you
know specifically what you are looking for before making application through
FOI acts, I wouldn't bother. Finding out at what Tim Horton's the local RCMP
do their Code 7's
or what Dunkin' Donuts or Krispy Kreme store the local state or county
police do their Code 7's at is much easier.

Vancouver B.C. uses Pro-Vocie, but a few of the large centres in the Toronto
area may be APCO-25. Seattle is still largely
analogue for example.

> short of breaking in to a squad car and stealing the radio, whats the
> best method to go about finding out?

Wouldn't want to do that. Even touching a squad car can get you a hard firm tap on the shoulder.

You could ask your local police, but be sure to tell them why you are interested.

This newsgroup (except for the political threads) is very good in the magic of having a good answer appear. I've learnt alot of
about scanner radio equipment and related information from here.

Ask here or go to trunked radio dot net. I'm sure you'll find what you're looking for. Not all large cities are digital, and not
all of them that are digital use Pro-Voice radio systems.

If you're asking if Uniden will make a card for Pro-Voice, the answer I got from them directly is no. Beacuse it is a proprietary system.

^ ... one more thing answered its about the [EDACS] trunking

^ ... they have 3 transmiter sites dose that meen I have to
^ use 3 seperate banks.

Possibly. The three sites would be for different geographical coverage. They could either transmit everything from each area into each of the other areas or they could do something less.

You'll have to determine if you can receive each site. If you can receive each then plug each into a separate bank in your scanner. Listen to each and determine if they are identical. If you will be travelling into each area frequently you may want to use all three anyway.

Frank

470. Re: Motorola Maxtrac radio question.

Newsgroup: rec.radio.scanner
Date: 2003-08-12 01:54:17 UTC
From: John <PowersJohn@iname.com>
Message-ID: <Xns93D4DE5894930IName@216.40.28.71>
Source record: 27173

If they have the model number it will give you an idea of the frequency range. The model number should begin with a D. The next digit tells you if it is high/medium or low power. The actual power output/watts will vary depending on the frequency band of the radio. The next or third digit tells you the freq range.

D51 30-50 MHz around 60 watts
D33 146-174 MHz around 25 watts
D43 146-174 MHz around 45 watts
D34 440-470 MHz around 15 watts
D44 440-470 MHz around 30 watts
D35 800 MHz around 10 watts
D45 800 MHz around 30 watts
D37 900 MHz around 10 watts
D47 900 MHz around 30 watts

You have to be careful on the freq range. For example, the D51 comes in 30-36, 36-42 and 42-50 MHz models. So the model number along may not tell you if that specific radio will cover the freq you need. It is best to ask before you buy. They can be shifted in freq but it requires some technical skill, manuals, etc.

Also, all these radios require a Motorola interface box, cable and software (and a slow computer running DOS) to program in the freq information. If you don't already have that, it could easily cost you a couple hundred of dollars to acquire it. Therefore it is recommended you have someone who knows how and has the equipment perform the programming for you.

If they still make it, the Rohn HBX series would be the least expensive.
(Notice, I didn't say cheap). It comes in 8 foot sections that bolt
together. The top section is the skinniest, about 6 in on a side, and
sections get progressivly larger towards the bottom. It is light enough that
one person could lift a 32 foot tower. Good for 10 sq. ft. of antenna. Self
supporting, if you mount it on a concrete base.

Another low end tower is the USTower MA40. This is a tubular crank up tower
with a hinged bottom. You either need their raising fixture (expensive) and
a concrete base, or support it at about 8 feet against a building. It comes
with the building support bracket; this method only requires a few bags of
concrete. Also rated at 10 sq. ft. of antenna.. With this tower the rotor
can not be mounted inside the tower, and you can not use a thrust bearing.

If you live in a fringe TV area that recently got cable, you should be able
to get a TV tower for free if you take it down. The ones I see in South
Jersey seem to be 40 - 50 feet.

Possibly the Icom R3?? My R3 certainly has a nice little LCD screen with
which I can watch TV. And yes it is a scanner - not a bad performer, but I
really dislike the piss poor battery life - even without the "TV screen" on.
These scanners have been around for at least 3 years.

Thanks for the inspiration. I drove around today looking at flagpoles which, despite being about as high as I want, have no guy wire at all and are just sticking out of a block of concrete.

I talked to my dad, and we're talking about GRC, which is extremely rigid. I told him what I had planned and he said it would hold the weight and stand up in weather with no problem.

As far as going down to my local TV shop and picking up a mast, I'd love to, but the closet store of that sort is probably 120 miles away.

I have a 25 ft pole made of plasticised paper, in 4 sections, with brass inserts at each end. Ex-army. I paid 5 GBP (nearly a week's pay) for it in 1953!

I used it guyed with light plastic line. It supported a 10 ele 2m beam for several years.

Message-ID: <3f38ddf4$0$130$e4fe514c@dreader5.news.xs4all.nl>
Source record: 27189

Hallo,

Last night there was very good DX on VHF and I received
2 EDACS control frequencies :

167.9500 (System ID 0001)
167.5500 (System ID 000b)

On the first network I could decode 2 voice-channels, on both of them
was AEGIS digital communication, one of them was 167.7750 MHz.

At the same time I heard an MPT-1327 control channel on 167.6250 MHz.

Does anyone have any idea where these frequencies are being used?

Bye, Peter Hunt (Holland).

I have a 780 and you can program it without software but it seems kind of tricky.

We are moving to an area where trunking is in operation and we will have to learn to manual (hand) program out 780. Don't know what the software costs and the cable between the computer and scanner.

>
> Robert,
>
> What is your mast made of and how is it supported?

It's ordinary radioshack TV mast - mild steel is the material, I
think. The support is...original. I bought some rifles awhile back, a 3-fer
deal where you take three guns and _maybe_ make one good one out of the
parts. Anyway, I took the action with the worst barrel and pounded into the
ground, muzzle-first. The bottom section of mast slips over this, and
there's _no_ way the bottom is coming loose. The top of the section is
fastened with two ordinary clamps lag-bolted into the house. Once that's
done, I raise the top 2-piece section while standing on the roof and drop it
onto the bottom section.
Again, I don't actually _recommend_ this - it ain't by the book.

Other side of coin is that to protect themselves, library officials shouldn't allow records to exist which would divulge identities of those authorizing purchase of books which gov't seeks identities of readers for. Conspiracy statutes - don't you know? Gov't would tie furnisher IDs to accessor IDs to establish conspiracy.

As far a standard Trunking scanner is there much difference between the performance of these two units. I have learned that newer is not necessarily better. And I am not likely to spent the extra bucks for the digital add-on card. So would I be just as well off with the 780 and save $70 bucks? Anyone know of a comparsion chart?

Thanks in advance for your replies.

Tom

Someone on here mentioned a place where you can get a new one for either $250 or $275. Maybe you can search for that posting or they'll see this and repost the source.

I've recently bought some on eBay for in the $230-$260 range. I have 7 of the 780's and 5 come from eBay all were in next to new condition.

Hi again Tom,
If you don't need digital then say far far away from the 785! I have 7
780's and 2 785's. The 785's simply suck, that sums it up. 99% of my
listening is MilAir and the 785's suffer very badly from intermod and FM
broadcast overload. Two problems that I do not have a problem with on
the 780's, even with some high gain antennas and preamps.

If you need digital then you're kinda stuck. I primarly use my 785's to
monitor the Kennedy Space Center's Astro Digtial 400 MHz system. It
does ok for digital systems but that's all the credit I'll give to the 785.

I also have a 250D. now that is a really nice radio. Its got better
sensitivity than the 785 and doesn't have the intermod and overload
problems as the 785 does. Its not quit as good as the 780 but its not
far behind.

No I'm not having any computer problems. Funny how I did a search on
google groups and found all kinds of people complaining about it. Anyway
you like the program then great. It's still not going to change my mind
about it. There are much better programs out there then winscam and I'll
use them and you two can stick with the novice programs. By the way
Thanks for the freq files you put on the yahoo group.

> community lied as well?

True.

> And, does it also mean that the 16 members of the
> UN security council all lied when they voted
> unanimously for resolution 1441 stating that Iraq
> does indeed have weapons of mass destruction?

Think about it, Mark. If the UN Security Council members actually believed Iraq had weapons of mass destruction, and wrote that in Resolution 1441 as you state above, there would clearly be no need for 1441. The goal of the resolution was to strengthen the weapons inspection program - a program to discover if Iraq had weapons of mass destruction and ensure the destruction of such weapons if they existed.

Resolution 1441 does not say Iraq had weapons of mass destruction. Instead, it states Iraq remained (at that time) in material breach of council resolutions regarding weapons inspections. It then spelled out the specific actions Iraq had to take to comply with 1441 and previous resolutions.

You can read a press release containing the full text of Resolution 1441 at the State Department's web site here...

Tried that already and had no luck. I found two in this area. We couldn't get the first one apart after we laid it down (someone welded the bolts) and the other fell apart as we took it down (heavy rust).

> Radio Shack's telescoping masts work well and are cheap.

A mast isn't going to work. We have a very small area behind the building to place an antenna. The tower can be bolted to the building at about eight feet, but will mostly have to stand on its own above that. We might be able to lightly guy the mast a few feet higher to the building and fence, but that won't be very strong. A free standing tower is our best bet.

As described in a previous message, there isn't a lot of room for guy wires. The area is about two and a half feet wide - just enough room for a cement slab to support a small freestanding tower. After that, there just isn't any room to run guy wires out very far. What there is (the building and a nearby fence) isn't going to provide a strong support for guy wires.

A shallow concrete slab will not support any tower unless the tower is
well bracketed to the house. There are only two choices: A large block
of concrete for the base or a slab with a house bracket.

> After that, there just
> isn't any room to run guy wires out very far. What there is (the building
> and a nearby fence) isn't going to provide a strong support for guy wires.

Use a mast made from steel pipe. I've used 'em several times, works
fine. Assume the bottom section of the mast is made from a full length
of standard 2.5" Schedule 40 galvanized steel pipe x 21 feet long. Top
the base section with a couple 10-12 foot lengths of smaller diameter
pipe and assemble the mast & antennas. Drive a five foot length of 3"
pipe into the ground, clean it out, raise the mast to a vertical
position and drop it into the 3" pipe. Bracketing might be optional
depending on the load vs. the stress & deflection calcs. No concrete
and only a few square inches of real estate req'd in either case. Will
not be "light" and the pipe will cost several hundred dollars.
Aluminum pipe would be 40% lighter but would be considerably more
expensive.

522. Macomb County, Michigan, new radio system?

Newsgroup: rec.radio.scanner
Date: 2003-08-13 22:54:05 UTC
From: Bill Crocker <wcrocker@comcast.net>
Message-ID: <pYednUZSkJ4QXKeiU-KYvg@comcast.com>
Source record: 27124

About a year ago, there was a lot of talk, about Macomb County, Michigan, getting a new public safety radio system. There were rumors of them, NOT joining the 800MHz digital system, used by the Michigan State Police. They were looking into something other than Motorola. It seems nothing ever happened. Any one have a current status on this?

Thanks,
Bill Crocker

523. AOR AR8000 vs AR8200B vs AR8200Mk2

Newsgroup: rec.radio.scanner
Date: 2003-08-13 23:46:28 UTC
From: TerMarL <termarl@msn.com>
Message-ID: <3f3ace0a$1_8@corp.newsgroups.com>
Source record: 27125

I am searching for some objective comparison between the three AOR's listed. The Mk3 ... I've pretty much nailed that as a Mk2 with another giga-hz. The only info I've been able to gather is that the 8000 has a good rep for HF and the 8200 has a better crystal. Any thing else appears to be subjective. I'd be very interested in some opinions from people who've played with all three or at least 2 of the 3. Thanks.

Dwight Stewart wrote:

> Resolution 1441 does not say Iraq had weapons of mass destruction.

I beg your pardon??

let me quote Resolution 1441 for you:

"Recognizing the threat Iraq's ...proliferation of weapons of mass
destruction and long-range missiles poses to international peace and
security"

The resolution clearly states that Iraq has WMDs and goes on to say
that Saddam is proliferating them along with development of missiles
for use in attacking other sovereign countries.

The language couldn't be more clear.

Take another look, Dwight.

> Instead, it states Iraq remained (at that time) in material breach of
> council resolutions regarding weapons inspections. It then spelled out the
> specific actions Iraq had to take to comply with 1441 and previous
> resolutions.

Wouldn't you agree that there would be no reason for inspections if
the security council didn't believe WMD's existed in Iraq? As Colin
Powell stated many, many times in the press and the UN, the resolution
was for Iraq to disarm, not to play a game of "cops and robbers" with
the inspectors. The inspection process was just a verification
technique it was not the primary goal of the resolution.

The voters punched little holes in a card with a stick.

the machine counted the cards.

Representatives from both the Democratic and Republican parties
approved of the process described above.

Bush got more holes punched in the cards on the first count and also
on the two recounts.

your claim that the election was "against the will of the people" is
complete nonsense.

Brian:

You should mention to telescope the sections, rather than using threaded
reducing fittings, which are not strong enough for this kind of application.
Out of curiosity, how much overlap do you use?

I've read that Philadelphia has gone digital and that the Bearcat 250D with the APCO-25 card will receive their transmissions. Can anyone verify this?

Also, what about Camden and Cherry Hill. I used to be able to pick them up on an AR8000, but now I don't get anything. Would the new Bearcat work with these cities?

Thanks in advance for any info!

Hello

Newbie here.. Wanting to receive airband transmission at 108-130MhZ
Looking for a scanner... Decent quality.. New or Used (looking for one very cheap.. cant afford much right now)

I also wanna pick up the other stuff, nothing fancy..
I would like one with a number pad that I can simply enter the frequency...

Any suggestion & Offers, please email me
tanveer DOT ali AT rogers DOT com

Live in Canada.. Rates for Shipping would be great too :-)

Thanks,

Tanveer Ali

The word "slab" was probably a poor choice. I was mainly referring to the width, not depth, of the concrete. The concrete will pretty much fill the entire hole below the ground surface.

> Use a mast made from steel pipe. I've used 'em

To make it freestanding, one would have to use some fairly thick steel pipe (both wall thickness and pipe diameter), especially for longer lengths. And pipe that heavy would almost require a crane to move it around. Because of that, steel pipe might be fine for shorter masts (or guyed taller masts using thinner pipe), but wouldn't really be feasible for a taller freestanding structure (unless one owned a crane, but then the crane itself could just be used to support the antennas).

For others, the full text of Resolution 1441...

http://usinfo.state.gov/topical/pol/terror/02110803.htm

The paragraph you quoted, Mark, actually says...

"Recognizing the threat Iraq's noncompliance
with Council resolutions and proliferation of
weapons of mass destruction and long-range
missiles poses to international peace and
security,"

Proliferation does not mean possession, at least not in any dictionary
I've seen. So that paragraph does not say Iraq had WMD. Proliferation, in
the context of WMD, most often refers to the spread of such weapons around
the world. And it is certainly true the proliferation, or spread, of weapons
of mass destruction poses a threat to international peace and security.

The purpose of Resolution 1441 was ongoing inspections to discover if Iraq
had such weapons and the destruction of any such weapons found. The
inspectors sent by 1441 found no such weapons. The United States has had
longer to search than they gave UN inspectors after Resolution 1441. The
United States has found no such weapons.

Pretty damn hard to be a 'proliferator' if one does not have anything to
proliferate wouldn't you say? Your argument holds little water.

I've done it both ways depending on a lot of variables. I noramally do
use threaded pipe reducers. As long as they're either steel or wrought
iron that is. The cheap hardware store cast grey iron reducers are
non-no's. I retap the reducers to get more thread engagement length.
It's been demonstrated that Schedule 40 pipe will fail in bending
before decent reducers fail. But in situations where the loads get
dicey and/or parts of the mast are tubing vs. pipe I use at least six
inch overlaps and have the joints welded.

Dwight,

My first tower consisted of 3 sections of Rohn HBX. This gave me 24 feet. To the top of this I added a 10 foot piece of 2 inch OD Al pipe. This was fastened to the tower with angle iron and U bolts at the top plate and the rotor shelf. Somebody gave it to me. It actually started life as a Hygain vertical. The middle of the second section was fastened to the end of the garage with TV house brackets. The ground mount consisted of three pieces of pipe driven into the ground, with 1 bag of concrete to add some strength.

BTW, have you considered a roof tower? Even a garage roof would give you at least 12 free feet.

Tam/WB2TT

That's nonsense. If you want a properly-designed pipe mast you do it
by the numbers, not with amateur "eyeball structural engineering"
and/or broad-brush statements like "have to use some fairly thick
steel pipe . . ". You won't know a thing about any pipe sizes until
and unless you run the numbers. A 40 foot pipe mast analysis is as
simple as it gets in the field of applied mechanics, any sophomore
student in any engineering discipline including the EEs who brought
you your HT can handle the job. A pipe mast is just a classic
cantilever beam.

You gather up five buddies. You hang a pulley near the house bracket.
Run a rope from the ground, thru the pulley then down to the midpoint
of the mast. There's your "crane". Three guys walk the mast up and two
pull on the rope and up she goes.

I bought a 30 foot tower from my local TV shop a few years back for $35.00 a 10 section. The company that makes it is American Tower I think they are in FL but a call to my local TV shop and he still sells the stuff only the price is now $41.00 a 10 foot section :-) It's free standing to 30 feet with a 3 foot X 3 foot X 3 foot base, or you can do what I did and stick 3 feet of the 30 foot tower in a 3' X 3' X 3' hole and fill it with quickcrete and run the garden hose on it for a few min :-) I used 2 U clamps to clamp it to the house in the middel of the 2nd section so my tower is good to 50 feet I'm told with a 6sq ft load

THIS PLACE MIGHT BE A START if you got the surfin time for searching

http://www.fairradio.com/0mk-12.htm

12 foot Military Mast Kit. Comes with: three 47" long x 1 3/8"
fiberglass mast sections, one 8" top mast section which holds
two horizontal arial antennas and also has 16 feet of RG-58 coax
with a male BNC connection at the end, two 28" antenna elements
that thread to the top section, one guy ring with guy rope, three
9" stainless steel stakes, one 27" long mast base which mounts
directly into the ground, and O.D. green carrying bag with handle.
There is no indication of a model number on the assembly.
Excellent for field day or other portable antenna use.

12 lbs sh. #MK-12, $59.50 each; 2 for $99.50

yodar

^
^ 12 foot Military Mast Kit.

^ 12 lbs sh. #MK-12, $59.50 each; 2 for $99.50

I've used those before. I wouldn't use it for a home antenna because there isn't much to it but it would make a very nice temporary mast to take car-camping -- or perhaps just to keep in the car for civil emergencies. I'd buy one if I had a car.

I seem to recall that it was longer than 12 foot -- more than three sections anyway -- so I may be remembering another kit. Still, it will fit in the trunk very nicely.

Now that is a good idea. We could just add eight or nine feet of pipe to the top of maybe two tower sections. That would give enough height, without breaking the bank. However, the base would have to be stronger. We live in an area where tropical storms are routine and hurricanes are not rare. I don't really expect it to stay up through a hurricane, but would like it to survive most tropical storm winds. A solid concrete base, as described elsewhere, would be better suited for the task.

> BTW, have you considered a roof tower? Even a
> garage roof would give you at least 12 free

Yep, the roof is out. We're leasing the commercial building and they're very touchy about their relatively new roofing.

It's not unusual.

Everything that is good, becomes no-good as the "unwashed" gets access.

For example, everyone has been at a job where the boss generally lets
people use the postage machine, or the phone, or the internet
connection, for personal use, but for OCCASIONAL use. Then when they
get bigger, some jerk they hire, abuses the privilege. What happens?
Shut it down.

That describes these newsgroups. This used to be a good place to give,
or take, good info. Now, not so much. Plus, I have to defend against
spam. See my disclaimer below.

Incidentally, packet radio went through the same phenom. It was
experimental, and weird, at first. Then it was adopted by the masses.
Then it was 'CB' (so to speak).

That's my opinion; yours may vary.

My guess is that:

People who post off-topic may be confused or uninformed. That is
absolutely excusable.

People who cross-post to a million groups: excusable the first time,
not so much the second/third time.

People who repeatedly post political stuff to the wrong newsgroups,
like the douchebags here (pineapple included) should suffer the Muslim
style of justice.

Again, the purpose of Resolution 1441 was ongoing inspections to discover if Iraq had WMD and the destruction of any such weapons found. The inspectors sent by 1441 found no such weapons. The United States has had longer to search than they gave UN inspectors after Resolution 1441. The United States has found no such weapons.

That argument, the key argument, only "holds little water" if you choose to ignore facts. And words on paper, read any way you want, don't change those facts.

That's curious, I've had on problem with rust what so ever on any of the RS masts I've used (three total).

I've got one on the roof now for 5 years, no problems. Bottom section is run through the access hatch, then bolted to attic floor. Holding a 5 el 6m beam and 11e l 2m beam. Rock solid through many big winds.

No more arms sales??? What do you fucking kikes need more arms for? The US has already supplied you with enough small arms to slaughter all the
Palestinians and if that doesn't work you can nuke em all. I think they should start selling arms to the Palestinians instead. Let's even the playing
field a bit and see how tough you kikes really are.

Same thing here jw. My dad has had one up for well over 10 years without
any problems and its stuck in the ground. Thats what made me decide to
get mine this summer.

I believe we need arms to prevent people who use such language as you do above from taking over the world again. Nukes, you just don't understand the seriousness of nuclear warfare, no one wins and everyone loses, including you.

Tough considering we have survived every attempt to wipe us out shows not only toughness of body but of mind.

but you being a goy wouldn't appreciate brotherhood - go read your bible and understand it.

and as far as "**king? hey , perhaps that is how we increase our numbers.

I think this conversation is over.

I'll sell you my Bearcat BC205XLT for $60 + $15 shipping and handling.
Infact if you send PayPal today, it will ship tommorow.

It's a heavily used unit, and shows some wear. But overall is in good
condition and all buttons and features work properly. And, the
battery is in good condition, it holds a charge for a long time (even
left it on all night once and it was still scanning in the morning).
Most of these units have bad batteries because they are Nicad and not
everyone knows to use it till it's dead before charging again. I was
going to put it on eBay, but if you're interested in it, let me know
ASAP.

BTW, 205XLT includes Airband, and this one includes leather case and
power adaptor.

Thanks,

Tom

My power came back about 4am. I sat here in the dark and without a scanner
to listen to. I never had or even thought of a battery back up for my 780's.
My utility company, PSE&G, is on a 900mHz trunked system so I had no way to
monitor them. lessen learned, GET A BATTERY BACK UP!! I am so mad at myself
for not doing this from the start..
anyone out there have a nice battery back up source? I am open for ideas,
please pass them along.
thanks
Anthony

Here's what I have - I have a standard lead acid car battery hooked up to a trickle charger and the scanners. It will run my
scanners non stop for DAYS if necessary. Any cheepie car battery will do (but get one that's brand new - don't get a used one)

The trickle charger keeps it peaked and when the power cuts out, the scanners don't even blink. It's the only way to fly. Even have
a portable TV that I can add into the mix if needed.

-noob

USCG aircraft operating over inland waters would have radio guard with the nearest USCG Group station - which in this case would be USCG Detroit Group. Those comms would take place on the VHF-FM marine band, probably on the usual trio of frequencies: 157.050, 157.100, and 157.150 which are marine VHF channels 21, 22, and 23.

Air-to-air comms between two or more helos would be in the military aircraft band 225-400 MHz which only the better top-of-the-line scanners cover, especially with the needed AM mode for this type of comms. There are several frequencies in common use:

381.700 and 383.900 are two very commonly used CG air-to-air and air-to-ground frequencies. 381.800 is a primary USCG air frequency. 282.000 is a USCG common operations frequency. 251.900 and 282.800 are frequently used on SAR ops, notg only by USCG but also other military aircraft on SAR missions. 237.900 is another USCG SAR frequency.

If you think you've seen a CG aircraft drop a rescue beacon, check 240.600 and 275.100 - if you're close enough to see it dropped, you're close enough to hear the beacon, they operate on those two frequencies. Also keep an ear on 156.800 (marine channel 16, the distress/emergency channel).

Channels 81, 82, and 83 (157.075, 157.125, and 157.175) are also CG channels. However, experience has taught me that in the Great Lakes area, due to the proximity of Canada and its own coastguard, the USCG tends to stick with 21-22-23 and the Canadian counterparts tend to use 81-82-83. You'll hear both on 16 though.

I have all of the above programmed into one bank in one of my scanners, along with chanels 9 (156.450, the new calling frequency, replacing 16 which is now supposed to be for emergency/distress use only (though recreational boaters seem to be slow in getting this through their heads) and 6 (156.300, which is a ship-to-ship safety frequency). It's generally locked out all winter long, but once spring hits and boats start going into the water, these frequencies become part of my regular listening until Old Man Winter shows his ugly mug around here again.

Hope this helps!

73 DE John, KC2HMZ

OK, name calling aside

Here's a question.

How many more arms do you need? Where are all the arms the US has given you over the years.
What does Israel do with all these weapons it has been
accumulating over the years. Why is it ok for you to keep accumulating weapons? Why don't
you give it up to the Palestinians and let there be peace?
They've earned the right to exist.

I just noticed after all this time that my PRO-43 scanner has a PRO-39 label on the back of the scanner! The label doesn't give coverage of the 225-400 Mil aero band, but the scanner does cover it. The scanner is definetely a PRO-43 (I've had several over the years). Date code is 7A3. It must have been a mis-label at the factory. Anyone else have the same?

Frank

In the first minutes after yesterday's power blackout, the Pentagon launched two Air Force F-16 fighter jets to patrol skies between New York and Washington, and put other military aircraft on alert at eastern U.S. bases, defense officials said.
....

"NORAD has no reason to believe there's an imminent airborne threat," a defense official said. But, he added, the decision was made to send the extra fighters aloft and put others on alert "as a precautionary measure." The planes took off from Andrews Air Force Base.

Great idea. Car batteries are only about $25 at Wal-Mart. get whatever is
on sale.

Also you can get a cheap 110 volt inverter for about $39 in
the auto department if you have a 110 volt radio or laptop
that you want to use during the power failure.

Sealed Gell-Cells, are much safer. Car batteries can give off fumes that
are explosive!

I currently have four handheld scanners, including a trunker, and I
keep plenty of fresh AA alkalines around for them. However, for stuff
that runs on 12 volts DC, look in the stores for those sealed
lead-acid batteries they sell for people to jumpstart cars with. The
one I have has a 17 amp hour battery, charger is built in so you take
your basic garden-variety extension cord and plug it into the unit and
into the wall and wait until the green light comes on to indicate that
it's fully charged. Not only will it start your car if you have a dead
battery, it'll run a scanner or a solid state shortwave receiver or
5-watt ham rig for a week (unless the ham is really long-winded).]

A department store here went out of business not long ago, I got two
for the price of one. Sears sells 'em for just under $50. Better deals
on similar devices may be available in other stores/areas. They have a
cigarette-lighter type plug on them. I've seen more elaborate devices
by other manufacturers that have a built-in lantern, or a small air
compressor to pump up a tire, or even a DC-to-AC power inverter built
in. Price will vary with added features, of course.

Just a warning about cheap power inverters. Most of the cheap one produce either a square wave or a very poor sin wave. Due to the quality of the wave your scanner's powersupply will not be able to filter out AC noise. You will get hum, interference, and possibly the scanners CPU will not function.

In the case of the BC 780 you can hook them directly to your 12 volt car battery. That is the best way to do it.

Don't be silly, Mark. Simple words are not treason in this country, at least not yet. If you want to change that, you'll have to change the Constitution first. And I don't think you'll find much support for that.

Hi Jim,
I've got a MacDonald Instruments CE-100 crystal scanner, and it uses the
Regency/Realistic (Radio Shack) crystals. I'm guessing your CE-206 uses
Regency/Realistic crystals as well.

I use TWO different backup batteries.
1. 12V 25Ah Gates Cyclon Rechargeable.
2. 12V 38Ah Panasonic Gel-Cell.

The 25Ah battery is connected to a 20Amp
Astron via a 25A reverse current protection diode.

The 38Ah battery is connected to a 35Amp
Astron via a 45A reverse current protection diode.

Each of the Astron's voltage was adjusted to provide
to float the batteries @ about 13.6V.

Each combo runs various 12V stuff in the shack.
When the power goes off, I don't notice it!

The 25Ah battery has been in continuous service
for almost 10 years and still delivers about 85% of
it's capacity. - YMMV!!

Agreed - I have a couple of Gel cells (an 18 Ah and a 24 Ah), both of which are already wired up ready to be connected to the power distribution box I have next to my power supplies - takes about 5 seconds to reconfigure the distribution to feed from the batteries rather than from the power supply. As I would also be running my amateur gear from the same power source in the event of a blackout, this would probably not be sufficient, so I have the option of running a lead from the car (or taking the secondary battery out of it) to charge up the batteries inside. A small portable 1 KVa gennerator is my next radio gear purchase.
One word of warning - do NOT overcharge sealed lead acid/gel cells as there is the potential for them to explode (rare, but I have seen it) - make sure that you use an automatic charger, i.e. one that can regulate the amount of charge when the battery is charged.

Matt

Oh, I see. You're speaking for N8KDV also. Since most people don't presume to speak for others, I didn't realize you did.

> Ok, then as mentioned above, if not treasonous
> then you are being reckless and disrespectful.

Thousands have died in Iraq, including some of our own soldiers, and you consider it reckless to question why? Indeed, it is disrespectful to our young men and women in uniform to not do so. If we don't demand accountability when they're placed in harm's way, then who is going to do it? Sitting in Iraq, they certainly can't. Neither can the Iraqi people. It is our job as citizens to hold our elected leaders accountable for their actions, especially when those actions result in death. If you don't agree with that, perhaps you would be more comfortable in a country where it is illegal to question those in power.

And that ends my response to your accusations. This issue is far too important to be dragged down to that. If you want to discuss the topic of Iraq and WMD, I'm more than willing. However, if all you want to do is attack me, you'll have to look elsewhere for a response.

Dwight Stewart wrote:

> Oh, I see. You're speaking for N8KDV also. Since most people don't presume
>to speak for others, I didn't realize you did.

No, not speaking for N8KDV. I am agreeing with him. He is the one who
said your argument holds no water. He is correct. In addition I
believe that your comments indicate that you have a political agenda
against the sitting President during a time of war. If you think our
policy in Iraq is misguided then say so. That’s fine. If you
want to call the President a liar you had better have substantial
facts to back it up or you will hear from me. We have shown you that
most of the world believes that Iraq has WMDs yet you stand by your
baseless accusations against the President.

> Thousands have died in Iraq, including some of our own soldiers,

I'm sorry to say, Dwight, that Millions have died in Iraq, Iran and
Kuwait thanks to Saddam. He was building longer range missiles so he
could kill more people. I see that you don't have much of an idea
about who is suffering in that region. Or, are you just choosing to
ignore it?

>and you
>consider it reckless to question why?

No, I consider it reckless to call the President a liar when the facts
are not in yet. If you question why we are fighting in Iraq
that’s fine. However, I do suggest you study and learn about
what’s going on before you announce your opinions.

>Indeed, it is disrespectful to our
>young men and women in uniform to not do so. If we don't demand

>accountability when they're placed in harm's way, then who is going
to do
>it?

Sabotaging our policy in Iraq encourages Saddam and his forces to continue to kill our young men and women in uniform. Your accusations are causing harm to our young men an women in uniform. You are providing aid and comfort to the enemy.

>Sitting in Iraq, they certainly can't. Neither can the Iraqi people.
It
>is our job as citizens to hold our elected leaders accountable

Yes it is our job to hold our leaders accountable. Don't you think you should learn the whole story about what’s going on before you begin, Dwight? I believe that the political party not in power should serve as the "loyal opposition" not the "mindless opposition". Do you really think this fuss about the president lying is anything more than a childish retaliation for Bill Clinton's impeachment? And, just for the record, I think that the Republicans were being childish for trying (and failing) to impeach a sitting President over issues in his personal life. Don't you think that all this childish behavior puts our young men and women in uniform at risk, Dwight? I do!

>for their
>actions, especially when those actions result in death. If you don't
agree
>with that, perhaps you would be more comfortable in a country where
it is
>illegal to question those in power.

I am feeling comfortable living in a country where the President is working hard to make sure that thousands of Americans never again die horrible slow deaths burned alive in a building such as the world trade center. I am feeling comfortable living in a world where any country that invades or attacks other countries gets its regime changed. The era of the murderous dictator waging war on his neighbors through international terrorism is almost over and I'm looking forward to it.

I expected a US response such as Iraq about an hour after the buildings fell in New York City. I am proud that America fights back when attacked. The world has been put on notice by words and deeds that terrorists and proliferators of WMDs will have nowhere to hide. I think America is doing the right thing. If you disagree then its fine to say so. I will listen. Just don't call the President a liar. And don't pretend that the world doesn't think Iraq has WMDs. Its reckless. Its disrespectful. It puts our young men and women in uniform at further risk and its not necessary. You can express your concerns about the war without calling the President names.

> And that ends my response to your accusations. This issue is far too
>important to be dragged down to that. If you want to discuss the
topic of
>Iraq and WMD, I'm more than willing. However, if all you want to do
is
>attack me, you'll have to look elsewhere for a response.

Great. I will look forward to no more posts from you on this topic.

Found

Someone was able to point me to Probe@datafileinc.com I had no Idea that
the Probe creators were behind Sherlock,
(i'm not surprised, as it was and is a great little frequency survey tool
for the HB/CE 232 control interface; on the 2004/2005/2006),
There's no support for it other than the docs, it's "as Is" and DOS only.
(I havn't tried it with Windows yet).
It's a small powerful little app for frequency surveys/searching and well
worth the price IMHO. The developer was very helpful and fast.

I purchased Sherlock for $19.95 through email with paypal. You can conatct
the developer at: Probe@datafileinc.com

Thanks to all that helped me find it!

Dom

609. Radio Shack PRO-29 vs. PRO-90

Newsgroup: rec.radio.scanner
Date: 2003-08-16 19:13:58 UTC
From: Jordan <bob@home.com>
Message-ID: <s90tjvor7joege31mspnvfqq8pqa8257rh@4ax.com>
Source record: 27011

Hello,

I've had a Radio Shack Pro-29 scanner for years, and it's worked great for me. A friend just bought a Radio Shack Pro-90 which is also a very nice unit.

However, the Pro-90 will not pick up any phone transmissions between 896.2000 Mhz and 940.0000 Mhz (the usual range I scan for portable phones). I can not understand why it will not pick up anything. I even found some active frequencies on my Pro-29 and set the Pro-90 directly to the same frequency...nothing. Turned the squelch all the way down, just loud static.

Now I know the Pro-90 works, because it scans all other frequencies. I can easily pickup police, fire, EMS, WX, etc. Just no phone calls for some reason.

I can not for the life of me figure out why the newer, "better" model can not pick up these frequencies...any ideas anyone?!? Perhaps it needs to be set to 'trunking' to scan those bands? I don't know...

Any help would be greatly appreciated.

Thanks in advance!

Jordan F.

It has everything to do with scanners! There are a lot of people here who monitor Military Air comms.

This post was as much on topic as anyone who posts "Major fire in XYZ city" as an aleart to turn on your scanners.

Just remember police, fire and cell phones are the only things people monitor.

And to add to my last post, if your really from New Jersey (as suggested by your email address) you would have been able to hear the F-16's which were mentioned. If you would have tuned in the frequencies found at http://www.milaircomms.com/uhf_cap.html you too would have been able to tune into the action.....

617. Communication During Blackout

Newsgroup: rec.radio.scanner
Date: 2003-08-17 00:12:21 UTC
From: mad amoeba <b@i.t>
Message-ID: <FLz%a.85862$_R5.33602055@news4.srv.hcvlny.cv.net>
Source record: 27019
Cross-posted to: misc.survivalism,rec.radio.scanner,rec.radio.shortwave

I was affected by the recent blackout in North East. That got me thinking of how would
one communicate during such an event. Electricity including phones were out.
Cellular phones didn't work either. So the only way of receiving informaiton was by radio.
My old Sony wm-gx670 did quite nicely. But what if I would need to communicate with
my relatives or even cops to let them know of an emmergency. If telephone/cellular/internet
are not available what are my other options? Let's say people I want to communicate with
are more than several miles away in an urban area. That makes CB radio useless--right? So
then as far as I understand using ham radio is my only option. With that you can either get in
touch with your relatives directly, provided they have ham radio as well, or you can call
some person in an area without blackout and tell them to call police/ambulance etc if that's
what you need.

Not knowing much myself about scanners/shortwaves/hams myself I want to ask you guys
with more experience if the below piece of equipment is what I need.

As far as I understand this is an handheld ham radio which also functions as a scanner and
can also receive on a shortwave band. So it will allow me to communicate with people
far away even in urban setting, it is portable and it will also allow me to monitor news as
well as police/firefighters etc. Am I right?

Yaesu VX-2R
http://www.universal-radio.com/catalog/ht/0176.html

the price is kind of steep but for all-in-one product I would be willing to pay it.

You need a license if you want to transmit legally. The Amatuer Radio Relay League has some information on getting licensed. Here's a couple of pages you might find interesting:

http://www.arrl.org/hamradio.html

http://www.remote.arrl.org/news/stories/2003/08/15/102/?nc=1

Try looking at the new vx7-r. It is a true dual band radio - you can
monitor 2 different freq at once.

In addition, it is more powerful (5+ watts). Can be modified
(although void warranty and in illegal) to transmit out of its
designed bands (Ham).

It's also about $200-$300 more,...

one good thing about these radios,... you can program them with a
PC so its easier to manage 250 memories,...

This is not true. There were long lines to use payphones, and most home
and business phones worked.

> Cellular phones didn't work either.

This is also mostly not true. Most cell systems were overloaded, but
the carrier signals were largely still operating, due to back up
batteries and generators.

oh i know that i need a license. The question is whether the product i
linked to can do all of the things i've mentioned--listening to
am/fm/shortwave, scanning and also communicating with other hams.
thanx a lot for replying.

AFAIK, it's legal to modify ham radio equipment if you have a license, just
not to transmit there.

Just to clairify in my mind, neither analog nor digital [CMDA, etc] ?

Rather limits the usefulness of mobiles if a mere power failure can
take them out.

However, is 2 metres any better?

I wasn't in the blackout area, but one thing I heard on the radio here
was that people did suffer from lack of phones, because they had only
cordless phones, which of course need power from the AC line. They
couldn't use those phones, and likely some/many thought the phone
lines were down. Only people who had real phones, that get their
limited power needs from the phone line, would know that the phones
were in fact running. I know cordless phones are pretty widespread
at this point, but I have no idea how many households have nothing but
a cordless phone.

Even if phone systems weren't working, one of the things to remember
is that other things come into play in an urban area. If the phone doesn't
work, then you have your neighbors to talk to. If the phones don't work,
then emergency systems will come into effect, so there will be means of
getting welfare traffic out. For that matter, emergency systems will come
into play to handle local emergency calls.

I think it's a bit of a myth to suggest that amateur radio is a means
for the individual to keep in communication during an emergency.
Amateur radios place in an emergency has always been in terms of
organized help.

So hams work with the Red Cross to supply non-emergency communication to
get around faults and blockades. It's not the place for "help me" messages,
it's the welfare messages "I am fine, don't worry" or maybe even "I won't
be coming this weekend, the airports are closed" things that might be
important but not of high priority.

And if the emergency warrants it, hams can supply local communcation as
an auxiliary to emergency services. So in some cases, hams could
be a way of providing some sort of replacement for phone lines, with
them placed in important points where it's known people can get to

if they need to communicate.

It's also quite organized, and those hams working in such public service work prepare for emergencies. Ham radio is not a utility, so unless the emergency framework is in place, someone getting a license "in case of an emergency" may not find it all that useful, because as mentioned the familiar people you want to talk to likely aren't licensed, and in an emergency one might find the bands crowded with the organized communication, and for instance, someone doing phone patches may not feel like dealing with some guy off the street.

In a rural area, I suspect the benefits of amateur radio to the individual may increase significantly, but then that's the case when there's no emergency.

And if someone is interested in emergency work, then it probably is worthwhile getting a ham license, because that will mean one more person who can help out when an emergency comes up.

Michael

Wired telephones worked well for contact of distant family during the blackout as long as they have hardwired phones on the other end. Too many cordless units lack base units with battery backup. I ran my house on a 5kw generator until the power came back. The first 30 minutes I ran the radios and computers on a 2000 VA UPS

Wrong

Verizon cellular worked great in Manhattan during outage. Made and received
16 callsi in 3 hrs..No busy signals or others. All calls came through and
we initiated without problems!

i have both cordless phone and an old type phone in my house where the handset is connected to the base station. Neiher one was working. If I had to contact either cops or amublance i would have no way of doing that except of standing on the street and waiting for the cop car to pass by. That's why i asked the question of how one would keep a line of communications if the regular ones were out.

I know that there are several providers and most of them were out. I might be wrong about Verizon but most of the cellular phone were out of action which was my point. Because if that's why most people have cellulars so that no matter where they are or what happens they can contact their family etc. But now as far as im concerned cellulars are not reliable.

Find the local ham club and discuss what you are looking for with one of them. In my area, you could listen to emergency services. However, non of them have gone to trunked systems. During catastrophic events such as hurricanes and ice storms, we provide interagency communications where there is no common frequency. For example, we have ridden with the National Guard picking up people stranded in homes when those people called 911.

Since normal protocol for us it to establish a presence at the Emergency Communications Center at the request of the County Emergency Manager, a ham could call for help if needed. Several repeaters in the area have battery/generator backup, so loss of power is not an immediate matter for concern. I've seen us without power to the repeaters for up to two weeks and we kept them going.

So, if you were in my area I'd say to go for it. However, ham radio is not government sponsored. All of those repeaters are installed, maintained, and supported by the hams who use them. Therefore, conditions vary a lot from area to area. For example, my home town has one repeater and it's at a hams home, maintained by him, and has no back up power supply. There are three hams that live in the area. He and his wife are two of them. The radio that you are looking at is way underpowered for simplex communications between two units. I'd look at a used two meter mobile and keep my scanner. You can pick up an older used two meter mobile for less than $100.

I have a lot of advice and opinions, but I'd rather defer to the local hams in your area who know the specifics of their systems. Give them a call. Most all hams love to help someone get into the hobby.

No I couldn't. I can use software to force my Pro-95 to recieve military air band frequencies , but it isn't meant to recieve them and if it does, it does so poorly.

Nice plug though.

Doesn't surprise me all that much that digital or analog mobiles
wouldn't be working, but would think that landlines should have been.

I would expect my landline phone to work for at least 12 hours on a
power failure, and if it didn't would be asking a lot of questions if
it wasn't.

If cannot reliably use a telephone for police, fire, or ambulance
coverage what the hell good is it?

Better to have a good CB or amateur radio transceiver. Other than
emergency use and dialup connection for internet many people could
easily get along without a phone.

Not difficult to get an amateur license these days now that the code
requirement has been wiped. Anyone who knows a bit about radio should
be able to study the regs and pass an exam allowing VHF operation on 2
metres, and the "general class" [or "full call"] exam is not that
much harder.

Passing thought: Don't assume that everyone with an amateur license
is going to advertise the fact. If reveal call letters, then name
and address is trackable.

Very dangerous to reveal true name and address on misc.survivalism,
as there are people on misc.survivalism who will not only accuse you
of criminal activities but even make death threats. This warning
especially applies to anyone outside of the USA whatever their
citizenship.

Take it from me. Been there, done that. May be able to offer more
info by email of don't think it is an entrapment excercise.

Maybe better for anyone outside the US to post questions on the
misc.survivalism group and see how they are answered.

If anyone would like to check my past posting history on the misc.survivalism newsgroup it is easy enough to do by checking through advanced group search in "Google".

My earlier posts were from another pseudonym, "larryn@ozemail.com.au"

I stand on my previous record of useful posts no matter how some on misc.survivalism are now falsely accusing me.

If any reader who is contemplating posting on this group has any doubts they might like to ask my accusers for any proof of their libellous statements.

Am also willing to answer genuine email enquiries.

General Class license still requires a Morse Code test. Morse has not
been "wiped." It has however, been lowered for the two higher class
licenses from 13 and 20 wpm to 5 wpm for both licenses. Morse is not
required for the Technician license which give full priviliges on
VHF/UHF.

So, once again ernie, you are wrong.

Hello,

I've been contemplating buying a good handheld scanner for quite some time now, and after this week I'm kicking myself for not having one (I live in NYC, didn't even have a portable AM/FM radio!).

Can anyone make any recommendations? I've primarily been looking at Uniden Bearcat models, but I'm most interested in maximum features and frequency range (ie search ability across non-programmed channels), ease of use, build quality, and battery flexibility (the BC250D seems good, but would like the option of using dry cells in a pinch).

Many thanks!

He's also in Australia, which, to my knowledge, isn't governed by the US FCC.

I got my Tech license recently, and plan on taking SKYWARN classes in the spring. The blackout has made me decide to accelerate my purchase plans for a mobile radio. Handhelds are more portable, but max out at 5w of transmit power, where most mobiles are 50-55w.

In a life-and-death emergency, anyone is authorized to transmit on any frequency or any band to try to get help, even if they don't have a ham license at all.

Well, to the best of my knowledge, I didn't use the term FCC. The IAU
set the morse requirement. However, just to set the record straight,
let's look here.

http://www.arrl.org/news/stories/2000/03/30/1/?nc=1

South Africa, Australia to Adopt 5 WPM Morse Test for Full HF Access

BTW, ernie was giving advice to someone who was impacted by the recent
power outage. I don't think it reached as far as Oz. So it doesn't
matter if he was talking about the NE US or Oz, he was wrong.
However, you will find that when ernie is wrong, he never acknowledges
that he has made a mistake. He simply moves to another thread and
starts over.

>I got my Tech license recently, and plan on taking SKYWARN classes in

You can pick up an amplifier for a few bucks to get you to the 25-30
watt zone. Going to 50 watts will only give you a 3 db gain. I've
got one laying around here somewhere that you could have if I can find
it.

Not required here for some years now, at least for what you are
calling a "Technician license" which covers 2 metres and is useful for
communication in that band.

Are you going to call me wrong on this issue???

Please advise.

Which issue do you want me to call you wrong on ernie? The first
piece of inaccurate information that you posted of this metamorphisis
of it?

On your initial statement, yes you were wrong. In case you forgot
this was your initial statement...

"Not difficult to get an amateur license these days now that the code
requirement has been wiped. Anyone who knows a bit about radio should
be able to study the regs and pass an exam allowing VHF operation on 2
metres, and the "general class" [or "full call"] exam is not that

This is a VHF UHF transmitting rig. Not ment for DX'ing. Just local. You need a SW rig to do that. And a ham license.

> one communicate during such an event. Electricity including phones were
> out.

In our area (Detroit and suburbs), the phones are powered by the phone companies and were not out. Apparently the phone companies do have some type of backup power. However, if all a person had was a cordless phone, then it did not do any good since those have to be plugged in to external power to operate. The non-cordless variety doesn't need that. After swapping my phone over, I was able to call my daughter to check to see if she was OK since she was stuck at a friend's house until gasoline pumps were operational.

Cell phone coverage here was erratic either because of overload or because the cell sites lost power too without sufficient backup power.

My best means of tracking the situation was ham radio. I got a lot more detail on exactly where and when power came became available and where and when it would be possible to get gas for the car and generator. Commercial radio broadcasting did not give very good or timely information on these aspects of the situation. They would state that "power is back on in parts of xxx" with no further detail. Via ham radio, I was able to find out what parts were back up so I could assess whether to go try to find gasoline or wait a bit longer.

Yes 2 meters is better as, if necessary, we can relay messages ham to ham to the final destination if our repeaters are out. Plus of course we hams can use other frequencies. If 2 meters isn't getting the job done for relatively local communications, we can go to something that has a good ground wave (such as 80 meters) and cover quite an extended local area very easily.

The phone traffic you are hearing on the 29 is images or harmonic ghostings of the actual cell phone signals. The 90 is built to filter these images out.

Hi,

What is on 11.175 MHz USB ? (is USB correct for this freq. ?)
Mil of some sort ?

Keep getting bursts of "noise" periodically every 5 seconds or so.
Very occasionally, a voice which I can't make out.

Live 25 mi due W of Boston.
Should I be picking anything up here ?

Thanks,
Bob

Well, if you're really into the digital thing, you oughta' wait until
Radio Shack makes the Pro96 available, this one will come with digital
reception circuitry built in. You can read about it in the current issue
of ScanningUSA.

If however you're looking for a plain-old analog scanner with loads of
bells and whistles, try Radio Shack's Pro95. This is RadioShack's first
handheld to include a channel/talkgroup text-tagging feature and it has a
PC interface as well (cabling and software not included).

That's why these older scanners are still in such demand these days.
Unsavory, sticky-fingered jerks still clamor for such scanners cause they
can use this image problem to circumvent the cell-block. Oh well.

well,... I guess i can add this question. is your wired phone
attached to Cable? i understand that in alot of metro areas, the
cable companies are now offering phone service across their lines. I
don't know anything about the equipment but this could be a issue if
the power goes out.

My cordless phone has a place for a 2nd batter to be charged for the
handset. in the event of a power outage, I can still use my cordless
for upto 3-4 hours. and I have my cable connection on a UPS,.. plenty
of time for me to use my laptop (which i can make iNet calls on if
needed) to notify anyone of need..

being a Ham - I look for equipment i can run off of 12v. I have a 12v
drill that i can power my PDA from, charge my cell phone, and work
with if needed. Push comes to shove,.. got the battery in the truck
too.

You're probably listening to military aviation air-ground comms (USAF nets) - actually on 11.176. USB is correct, and they're generally copiable worldwide from places like Offutt AFB Nebraska, Macdill AFB Florida, etc.

Hi,

Here in Windsor, Ontario (just across the river from Detroit) I was surprised to see the light flash as the phone rang on a phone for the hearing impaired I have from Bell Canada. There is a backup battery for anything I have in memory (I didn't have to reprogram my push button numbers) but the phone's amplification system was out even though the ring light came on and that sucker is bright.

I did have to reprogram my clock in my Sat-800 but not my memories as I thought I may have had to (breathing a sigh of relief). I may get some D batteries and keep them in it as a backup although my DX-398, Grundig's 400PE and Mini 100 worked like charms during our black out. We lost power for about 12 hours. My brother who lives in a different part of Windsor was out for about 28 hours. It was strange looking out over our balcony (I live in a high rise in downtown Windsor facing Detroit) and NOT see Detroit....very eerie. A few of my friends are suddenly interested in SWL

I can't remember a time whem morse code was ever required fot the
tech class licence. I have some HAM study books from back in the
60's and even back then (in the U.S.) there was no code required for
the *tech* class. A few years ago the code requirment was lowered to
5wpm for *all* classes. IIRC, this was done in order to get more
people into HAM radio and to help uncrowd the 2m band. And IIRC, once
you pass the 5wpm code test for the *general* class licence you are no
longer required to take anymore code tests for the *extra* class
licence. They did away with the *advanced* class, IIRC.

Here's a question....Who these days gets the *novice* class licence ?
Why didn't they get rid of the *novice* class instead of the
advanced ?

Would the FCC prosecute someone for using a ham rig without a license
if there were no other way to communicate that someone was injured or
other "emergency" help was needed? Seems like a mobile ham rig would
be a nice backup in such cases.

Cable has a small box for translation with very limited backup
battery. Once power goes to either the head end or the VOIP
translation box.. you are screwed.

There is also sutff like Vonage and the other voice over IP
"appliances" you attach to your broadband connection for phone
service, however VONAGE over something like DirecWay satellite would
be a good emergency backup, as long as you could provide your own
power.

With vonage, you can pick the 911 PSAP, so you can even dial 911, and
it ends up in the right jurisdiction.

Perhaps not reliable for the "average" person.

Verizon kept a percentage of capacity in reserve for public safety,
and the new public safety phones have priority, so will knock "no
priority" calls off the tower if they place a call.

If this is the case then why doesn't one of the local amateur radio
operators make themselves available to the local news anchor, much like
cellular users report traffic problems on a normal day, and that way the
generalpublic could be better informed.

Icom R5 US version in like new condition, fully functional. Comes with all original accessories, radio, antenna, belt clip, wrist strap, batteries, charger and manual
Plus you get the USB programming cable (cable software) Plus the Icom software for the R5 on CD. All is original, no copies.

$225 shipped CONUS USPS Priority mail OBO
No sales outside of US
I take Paypal

> cantilever beam.
>

I agree with the essence of Brian's observation. However, I offer two
additional observations:
1. The engineering understanding of tall columns using steel has gone
through quite an evolution in my lifetime. Buckling of a vertical
cantilever beam (A.K.A. a column) is a different issue from the breaking
of an actual cantilever beam. Need to study the latest steel handbook
and the tower standard and use an appropriate safety factor that is
larger than 1. [Yes, the latter is a snide remark. People do sell
stuff with specifications that are accurate for a safety factor of one!]
2 The engineering understanding of the effects of wind has also
undergone quite an evolution. See the tower standard (222F, I think is
the last one published). Any simple relationship between "miles per
hour" and pressure is almost certain to be inappropriate. [Do not
believe most antenna manufacturer's survival ratings in terms of MPH.]

However, for the heights being discussed, the "roughness" of a typical
urban neighborhood will significantly reduce wind loading from what one
would expect using weather wind info. That fact provides an additional
safety factor that just does not exist where I have placed antennas and
towers.

I give a big Amen to Brian's observation that even EEs should be able to
run the numbers AND a big Amen to the need to run the numbers. This is
an area where one wants to check twice - or more.

Unless you count the PRO-92 or PRO-93, both of which came out before
the PRO-95 and included all of the features described above.

The code requirement for the Technician class license was removed a long
time ago. Ernie was right. Take your head out of your ass.

There is a good description of the HF-GCS system on this page along with
current frequencies, you'll have to scroll down for it.

http://www.wunclub.com/newsletter/v09/n07/mla.html

Also there are many other frequencies. While you are there, check out
the rest of the WUN site.

YOu remember wrong. I was licened as a Tech in 1972 and there was a 5 wpm test for that license. Not sure exectally when but it was in the late 80's or eairly 90's that the code requirement was removed from the Tech class.

As far as your question , there are no new novice class licenses or advanced class. Only the Technichian, General, and Extra are being issued now. It is still possiable to renew the other classes.

All the above is for the US.

The FCC did away with both the novice and advanced classes. People who currently hold them can renew ad infinitum but no new ones will be issued in either category.

> the sitting President during a time of war. (snip)

And what political agenda is that, Mark? I openly supported Bush for President during the last election. And it is not "a time of war." The president himself has publicly declared major hostilities over in Iraq.

Instead, you're more likely the one with a political agenda. Since you keep talking about the Democrat opposition, you're obviously a Republican determined to protect your president regardless of what he does. As I stated earlier, this issue is far too important for petty political loyalties - our country's honor and reputation is at stake. Perhaps you should ask yourself which you care more about?

> (snip) If you want to call the President a liar
> you had better have substantial facts to back it
> up or you will hear from me. (snip)

Again, I did not call the President a liar. Instead, I said it appears he was lying. As for the facts, one fact is that neither you or the President can show a single weapon to support claims that Iraq had WMD in the months leading up to this country's invasion of that country. You choose to ignore that fact and instead attack me for pointing out the ongoing failure to provide that proof.

> No, I consider it reckless to call the President a
> liar when the facts are not in yet. (snip)

And exactly when will those facts be in, Mark? The military has has longer to search for WMD in Iraq then the UN inspectors following Resolution 1441. That time period was enough for us to dismiss what those inspectors were saying and invade a country. Why now is the longer time period we've had not enough?

> Sabotaging our policy in Iraq encourages Saddam and
> his forces to continue to kill our young men and
> women in uniform. Your accusations are causing harm
> to our young men an women in uniform. You are
> providing aid and comfort to the enemy.

Nonsense. Show me one Iraqi who has read anything I've said. According to our own President, Saddam is most likely dead. It's fairly hard to encourage a dead person, isn't it? And, as far as I know, very few in Iraq now have

internet access.

Regardless, since an "enemy" of some kind is always going to exist, that argument can be, and is being, used to prevent any opposition to this government's actions. In other words, only someone attempting to end free speech in this country would resort to such an argument.

> Yes it is our job to hold our leaders accountable.
> Don't you think you should learn the whole story
> about what's going on before you begin, Dwight?

Mark, the only way to know anything is to seek information. At this point, without any evidence of WMD in Iraq, it appears the government, including the President, lied about that. You insist I must have proof before I can say anything about the president, but the president waged war based on as yet unsubstantiated claims. If WMD existed in Iraq, the President should provide evidence of that. If not, he should admit he was wrong instead of trying to distract from the issue with talk about intelligence reports and weapons programs instead of weapons. And all this should happen now instead of delaying years while hoping most people will forget. Bush supporters continue to repeat those unsubstantiated claims. The same applies to them.

> I believe that the political party not in power
> should serve as the "loyal opposition" not the
> "mindless opposition". Do you really think this
> fuss about the president lying is anything more
> than a childish retaliation for Bill Clinton's
> impeachment? (snip)

Do you really think this issue is that petty - that opposition to the invasion of another country is based solely on politics? If so, you're entirely wrong in my case. First, since I'm not a Democrat, I'm not the "opposition" on anything other than this conflict. Second, I think Bill Clinton should have been impeached, both for lying in a deposition and for having sexual contact with a subordinate. As I said before, I strongly supported Bush for President, but that doesn't mean I support everything he does. In this case, I think his actions were flatly wrong.

> (snip) Just don't call the President a liar. (snip)

Once again, I did not call the President a liar. Instead, I said it appears he was lying. And, at this point, it does indeed appear that way.

> Great. I will look forward to no more posts from
> you on this topic.

As I said, I don't intend to continue responding to your accusations - but you can certainly look forward to more about Iraq and WMD.

Things change over the years . I think the major change was in April of
2000. Not sure about the date, but For current info you may want to go here
for the current classes of license.

http://www.arrl.org/FandES/ead/classes.html

Throw the books away and get a new set as they appear to be out of date.
The question pool has also changed somewhat in the last year or two.

In the real world? They don't often act without a complaint. Who'd complain? Even if somebody complains, they don't seem to knock themselves out on enforcement. But I'm not close to the situation. I'm not a ham, I'm just watching from the sidelines.

On the other hand, if you do want to get a ham rig, I don't see any reason not to get the license. Proficency is the bigger part of preparedness. Practice, practice, practice. In an emergency situation, it pays to have radio operator's and communication skills which are second nature.

Keeping in mind, one of your original considerations...the PRO-95 uses only four, standard "AA" batteries, where the BC245-XLT has that pesky rechargeable battery pack. During a crisis, you may find it easier to find more "AA" batteries than a way to charge your battery pack. The PRO-95 also allows for alpha tags for each channel, where the BC245-XLT does not.

It has always been "my understanding" that in a "true emergency", you can use any form of radio communications, without a license. However, not too long ago, an amateur radio operator, involved at the scene of a very serious life, or death, situation, used his modified HT, to summons help from the local police. Later, they tried to do everything short of executing him for his actions! Go figure?

Most all the hand-held amateur radio equipment, is almost useless without the aid of a repeater station. I don't know how many repeaters are backed up by emergency power supplies. I would hope most of them, but if they're not, don't plan on reaching anyone more than a couple miles away.

H.F. equipment, on the other hand, is usually at least 50~100 watts, and has the ability to reach extremely long distances, without the need of a repeater.

When you think about it, standard C.B. radio equipment should do well, providing there is someone available on the other end.

Interesting. My phone, an old type, worked just fine. Some places I did
not get an answer and some numbers, when first tried, I got a recording that
all lines were tied up.

Only lost power for about 5 hours., took a nap for most of that.

So it requires a ham radio license. Scroll down the page at
http://www.arrl.org/hamradio.html
for info on getting a ham license.

Yes. Except that 2 meter and 440 MHz radios, especially small ones,
have limited range of only a few miles. They depend on repeaters to
relay their messages long distances, and the repeaters run on electric
power.

Don't know the siatuation there, Brock, but the requirement has been
wiped here

Wireless Institute of Australia - WIA Victoria

Morse code watch
updated July 10 2003

Morse code requirement ends - Morse code watch closes
It is official! The ITU at the World Radiocommunications Conference has removed Morse code as a mandatory requirement for amateur licences below 30MHz - effective 5 July, 2003.

Radio administrations around the world that previously supported the removal of the code requirement are now moving towards implementing the ITU decision.

Demonstration of code proficiency is no longer an internationally required qualification for an amateur licence though a radio administration may still require it.

Some radio administrations are expected to take virtually no time to end code tests, or maybe a few months, while the bureaucratic processes elsewhere may take longer.

The name has changed however for the most part the frequencies, call signs, descriptions are correct.

Howeve beware the WUN newsletter is put together by one Larry VanHorn. When I see that name attached to anything I now take it with a grain of salt. Why you may ask? Here's why:

1) Recently the magazine he's involved with published over 4 pages of Florida State Astro freqs. NONE of which were useful as they were incorrect. Dummy me bought an issue and should request a refund as that was the only reason I bought the issue.

2) The NASA Trunking system list he and his group published were incorrect for over a year. I see he's finally fixed them after I've been calling everyones attention to it for several months.

3) The Military Trunking frequencies he and his group published for the MacDill AFB are silent, I'll bet they're incorrect as well.

4) Descriptions/Labels he used for various frequencies in FL are incorrect and in some cases missleading.

The above are just want I was looking at and able to confirm. Just one state out of 50, I'm sure Florida isn't the only state he has published incorrect infomation for.

Now lets see how fast I get more hate mail from the F.O.G. group. (Friends of Grove - membership = 3).

I run my website for one thing and one thing only. To help others in the hobby. I do not charge for the info, I give it away for free. However Grove will charge you $30-$40 for a CD which contains over 80% out dated PDF files he downloaded from Gov't sites. Files which are available to the public for free and are NOT copyrightable. Again, I run my website (www.MilAirComms.com) to help others gain information, frequencies, and help in the fine hobby of MilAir monitoring. I guess I got sick and tired of asking questions which went unanswered by the so called experts. I was tired of newbee's trying to get into the hobby who asked questions only to be receive snid comments from the F.O.G group.

So if you like the website that is great. If you don't like the website that is no skin off my ass either. I know that by the 100's of emails I receive weekly from the website that there are a lot of people who are being helped by it. And with an average of 3,000 UNIQUE visitors (ie: different IP addresss, not file hits) daily is yet another indicator that there's a more than a few people who like it. Not too bad considering everything time one of the F.O.G. guys gets a chance he'll make derogotory comments and in several cases out right lies (backed up the MilCom archives themselves!) about me or the site.

^ That's not *all* you'll get.

You'll get the same if you came up on any frequency you aren't licensed to transmit on. Cop frequencies are no different, except that you'll get help faster.

As long as it is a true emergency then anyone can use any frequency
available to them. Just 'injured' may not be enough, but any life
threatening situation will justify it. That includes police freqs.

(all of it snipped)

Sorry, if this has been mentioned (I can't read all 60 replies) but ..

While the radio in question can recieve shortwave, it can't transmit there (and even if you could modify it to .. it would still only be FM and low powered)

Without "repeaters" a hand held ham radio is very, very limited in range.

There are other possibilites .. such as the Yaesu 817, but you'd need a higher class of ham licence and (realistically) a bigger, better antenna (and a lot of luck) for HF (High Frequency .. aka 'shortwave') communications.

Richard in Boston, MA, USA

Dunno if they have or not, haven't bothered to check. The issue is
that you have accused me of being in error, and I have proved you
wrong.

You cannot logically blame me if you refuse to keep up with current
news on such issues, and this was more than a month ago.

Perhaps you don't belong to the ARRL, or perhaps they haven't
mentioned this issue?

AFIK, that is correct.

However, as has been pointed out before, "the devil is in the
details".

Can you "prove" that you needed to use these frequencies? If you
stop to help a victim of a road accident, can you "prove" that it was
necessary to move him? [Yeah, he may have run into a tree, his car
is on fire, but can you safely drag him out? Depends on whether your
state has a "Good Samaritan Law" perhaps?]

Can person "A" legally kill person "B"? Depends on the
circumstances, actually.

Leave us not forget that the Pro95 has a cloning and PC interface feature. The only fly in the ointment here is that the PC interface cable available from Radio Shack is not compatible with the Pro95, but it is compatible with other models (don't ask me which ones). The cable is a rare breed, it has a 1/8-inch phono plug at the scanner end and a DB9 plug at the PC end (this connects to the PC's serial port). Why Radio Shack doesn't offer a cable that'll work with the Pro95, I have no idea.

About batteries: The Pro95's batteries are inserted into a plastic module which is then inserted into the battery compartment. There are two such modules. The one that comes with the scanner is not recharge capable, but there's one sold seperately that is.

That is a rather broad statement. It depends greatly on where you
live (or are) in relation to where you want to talk to. I live in a
very ham dense area and can make dozens of contacts on simplex.

> I don't know how many repeaters are backed
>up by emergency power supplies. I would hope most of them, but if they're
>not, don't plan on reaching anyone more than a couple miles away.

Glancing through the repeater directory, I'd guess about a third of
them.
How do you define, "a couple of miles"? My Icom T2H (a 7 Watt hand
held) can make it from my house to the repeater 18 miles away. If I
can hit that repeater then I can talk to anyone between it and me on
simplex, and that is with the rubber duck antenna. Using a home made
twin-lead J-Pole antenna I talked on the repeater from downtown
Chicago which is a 36 miles trip.
On 2 Meters, get your antenna high and you can really reach out.
Height is Might.

>
>H.F. equipment, on the other hand, is usually at least 50~100 watts, and has
>the ability to reach extremely long distances, without the need of a
>repeater.

Wattage doesn't mean a whole lot with HF because it isn't the power
that enables the longer distances. My 2 Meter rigs at home are 50
Watts. Actually, most HF rigs are 5 to 10 Watts and an external amp
will be used to increase power. Depending on conditions, you can talk
all 50 states with 10 Watts on HF.

>
>When you think about it, standard C.B. radio equipment should do well,
>providing there is someone available on the other end.

IF you are in an area with CB users and IF they are helpful and not
just kids wanting to screw around. Also, CB, being limited to 4 Watts
is typicallty very short range. If you are in an area with a lot of
CB users that are 'adult' and use it as a tool then it may be the
proper answer. Same for FRS and GMRS. Where I am, CB is worthless
due to the people that use it. If you can't top someone elses signal

then you aren't going to talk.

How do you define "a few miles"? Like I said in another post, I can
go 18 miles on my 7 Watt 2 Meter HT. Put a decent antenna on it and I
can talk a lot further. Our club repeater has over a 50 mile range
and only puts out 25 Watts.
Depending on usage, our repeater can go 4 or 5 days with no outside
power.

I was able to hit a 'local' repeater with my HTX-202 using only the stock antenna from a distance in excess of 50 miles. This was from a place in the valley west of Salem, OR to a hillside east of Vancouver, WA. This was using 5 watts for clean copy. If one station is in a good location, even an HT can get very good range on 2m.

Here is the scanner I was talking about:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3041726545&category=40980

BTW, sorry about high shipping in last post. Shipping will only be
actual cost only.

Bearcat BC205XLT 200 Channel Scanner

* Includes original battery that works Well! Often these NiCad
batteries have developed memory and are unusable, but this one works
great and holds a long charge.
* Scanner is fully operational, all buttons and features work
properly.
* Includes antenna, charger and protective leather case.
* Frequency ranges: 29-54, 118-136, 136-174, 406-512, 806-960
* This unit has Not been modified in any way.

This unit is guaranteed against DOA but is otherwise sold as is
because of age.

Yes, Dwight, you have correctly repeated the words "major hostilities" above. Did you hear the President say the War was over in Iraq, Dwight? Do you understand the difference between the major hostilities and the war? Have you not been paying attention? I can see how your thinking allows you to call the President a liar as you redefine his words to suite your point. Also, you need to expand your understanding, Dwight, to the whole world and the whole threat, of which Iraq is a small part. There are two more countries remaining that make up the Axis of Evil along with terrorist organizations operating in and attacking several other countries.

Its also not a coincidence, Dwight, that Libya just recently accepted responsibility for the Pan AM airliner bombing years ago. Do you think that is happening this week by magic, Dwight?

Its all the same war, Dwight.

Your President is putting up a good fight on all fronts and he may not take time out to explain his strategy to you or seek your approval. You can't even see all the fighting, Dwight. You should support him anyway.

>
> Instead, you're more likely the one with a political agenda. Since you
> keep talking about the Democrat opposition, you're obviously a Republican
> determined to protect your president regardless of what he does.

I have an agenda for better national security, Dwight.

I thought he was your President too, Dwight?

I am against mindless fools regardless of political party, Dwight.

I thought it was an outrage that Clinton was accused by the "mindless opposition" of "ulterior motives" when he was dealing with the threat

in Iraq. I try to support "our" President. Thats what a good American
does!

>As I stated
> earlier, this issue is far too important for petty political loyalties - our
> country's honor and reputation is at stake. Perhaps you should ask yourself
> which you care more about?

The safety of our people, our buildings and our infrastructure
is at stake, Dwight.

Honor and reputation??? are you kidding me?

If your claim that the President is a liar had even a shred of
evidence I would be behind you, Dwight. As it stands today, Dwight,
you seem to have some petty desire to take issue with whoever is the
President.

>
>
> > (snip) If you want to call the President a liar

> > up or you will hear from me. (snip)
>
>
> Again, I did not call the President a liar. Instead, I said it appears he
> was lying.

or he was mistaken, or the weapons are still hidden, or they were
destroyed by Saddam but he resisted the inspectors anyway, or......

Why do you jump to "lying"? That giant leap says more about you than
it says about President Bush.

> As for the facts, one fact is that neither you or the President
> can show a single weapon to support claims that Iraq had WMD in the months
> leading up to this country's invasion of that country. You choose to ignore
> that fact and instead attack me for pointing out the ongoing failure to
> provide that proof.

I'm attacking you, Dwight, for calling the President a liar not for
questioning whether WMDs exist in Iraq. Your thinking that "weapons
unseen are weapons that don't exist" is irrational.

>
>
> > No, I consider it reckless to call the President a
> > liar when the facts are not in yet.
>
> And exactly when will those facts be in, Mark?

We should at least give the President as much time as we gave Ken
Star, shouldn't we, Dwight?

>
>
> > Sabotaging our policy in Iraq encourages Saddam and
> > his forces to continue to kill our young men and
> > women in uniform. Your accusations are causing harm
> > to our young men an women in uniform. You are
> > providing aid and comfort to the enemy.
>
>
> Nonsense. Show me one Iraqi who has read anything I've said. According to
> our own President,

Yes, Dwight, in this specific case I will concede that your opinion is probably irrelevant, useless and most likely will go unheard by anyone of importance considering where you posted it but..... the body of treasonous fools in America throwing up mindless opposition to the President is doing great harm. Do you want to contribute to that disloyalty? Do you want to do harm to America's ability to respond to terrorist's and terrorist states or do you want to support and defend America and its young men and women in uniform?

If you had any evidence other than your fractured "weapons unseen are weapons that don't exist" logic for calling the President a liar you might not look quite as treasonous.... or mindless.

> Saddam is most likely dead. It's fairly hard to encourage
> a dead person, isn't it?

So you have decided that there are no WMDs in Iraq and that Saddam is dead. I guess we should send the CIA and NSA home and just ask you what's going on in Iraq. Also, let no of us forget, if you haven't seen it then it doesn't exist.

>And, as far as I know, very few in Iraq now have
> internet access.

Shallow thinking, Dwight. Has it occurred to you, Dwight, that Saddam may have dismantled and hid the weapons because he expected people like you would stand up and start bleating that the President is a liar. Given his inferior military forces that would be his most effective weapon against the US and you would be a part of it. Stop supporting Saddam and start supporting your President.

>
> Regardless, since an "enemy" of some kind is always going to exist, that

> government's actions. In other words, only someone attempting to end free
> speech in this country would resort to such an argument.
>
>
> Mark, the only way to know anything is to seek information.

Thanks for that tidbit of wisdom, Dwight! I never would have known!

Has it occurred to you that the President has to make decisions based
on information you will never be allowed to see?

>At this point,
> without any evidence of WMD in Iraq, it appears the government, including
> the President, lied about that.

Everything you don't understand isn't proof that someone lied to you,
Dwight.

>You insist I must have proof before I can say anything about the
president,

There you go again......

I insist that you have proof before calling your commander in chief a
liar. There are many other things its perfectly acceptable to say.
Try to stay focused, Dwight.

>but the president waged war based on as yet unsubstantiated claims.

The president waged war under authorization of UN resolution 1441 and
almost unanimously approved legislation from the US congress. I will
also point out, Dwight, that the congressional leaders had access to
the same intelligence information as the president. Sorry that he
didn't get permission from you as well. Your "unsubstantiated claims"
argument is a fantasy to shore up your desire to call the President a
liar and to further your hidden political (perhaps emotional) agenda.

> If WMD existed in Iraq, the President should provide evidence
> of that.

Even if WMDs are never found, it would only mean that the whole world
was mistaken and a murderous dictator is gone.

>If not, he should admit he was wrong instead of
> trying to distract from the issue with talk about intelligence reports and
> weapons programs instead of weapons.

The President has always been talking about weapons programs, and so
has the UN, and so have several international nuclear and biological
weapons watch dog organizations. Its clear that you have a desire put
the truck load of facts aside and to single out the President for
accusations.

> And all this should happen now

Yes, its the video game generation. You want everything now.
Sorry, the President is a little too busy to coordinate schedules for
your approval.

>instead of delaying years while hoping most people will forget.

This is just another way of calling the President a liar. You are
accusing him of attempting deception by delay. The core of your
thinking seems to be paranoia against the President. It's seems that

your mind is incapable of understanding that they also may be working hard to find where Saddam hid WMDs and it will take a while. We do not yet know which scenario is true but you are ready to start calling people liars.

>
> Do you really think this issue is that petty - that opposition to the
> invasion of another country is based solely on politics?

Ok, Dwight, Lets try this yet again.....

You are free to question if we should have invaded Iraq. You are free to Ignore UN resolution 1441 and ignore all the years that there were no inspectors in Iraq until President Bush, under threat of force, got them back in. You are free to ignore the invasion of Kuwait, the Murder of the Kurds, the discovery of parts for gas centrifuges used to create nuclear weapons etc. etc. etc.....

You can even stick your head in the sand if you want, Dwight.

The only thing I object to is your calling the President, your President, your Commander In Chief, a liar unless you have substantial evidence. Its just plain arrogance to think the military is responsible to build a case for defending the US and make it a custom fit for your thinking skills, else everyone is lying.

>If so, you're
> entirely wrong in my case. First, since I'm not a Democrat, I'm not the
> "opposition" on anything other than this conflict. Second, I think Bill
> Clinton should have been impeached,

So now its becoming a little clearer. You seem to have issues with all Presidents.

>As I said before, I strongly
> supported Bush for President, but that doesn't mean I support everything he
> does. In this case, I think his actions were flatly wrong.

His actions were outstanding (both, the actions you have seen in the news and the war being waged that you haven't seen on the news) and we are much safer in the world because it.

I feel better knowing that he is running the country and you are relegated to posting disloyal messages on the internet after remarkably shallow analysis.

>
>
> > (snip) Just don't call the President a liar. (snip)
>
> Once again, I did not call the President a liar. Instead, I said it
> appears he was lying. And, at this point, it does indeed appear that way.
>

It also appears that 150,000 troops are scouring a country the size of
California for weapons after Saddam has had many years to dismantle
and hide them. Your bias toward discrediting your President is
showing loud and clear.

>> And that ends my response to your accusations. ..if all you want
to do is
>>attack me, you'll have to look elsewhere for a response.

Damn! I wanted to trust your word but In the back of my mind I knew
you were lying about making no more posts.

717. New Yahoogroup for Alternative Power Solutions

Newsgroup: rec.radio.scanner
Date: 2003-08-18 08:10:32 UTC
From: John Smith <someone@microsoft.com>
Message-ID: <3f4089fa$0$6527$afc38c87@news.optusnet.com.au>
Source record: 26920

I did a search for a Yahogroup relating to alternative power systems and couldn't find one. As a result I decided to start one.

If your interested have a look at:

http://au.groups.yahoo.com/group/alternate_power/

Or sign up directly by email at:

Subscribe: alternate_power-subscribe@yahoogroups.com.au

The group page is in it's very basic form at the moment, just to get it off the ground. I'll be putting a bit of work into it over the coming week with a bit of luck.
I am based in Australia, where private alternative power systems are really only just starting to get off the ground publicly, but the group is open to ideas from around the world, so feel free to join.

Alternative power systems are a great way to keep your radio equipment and other essential items in your house running when no one else (like the power company) can provide the service for you - especially during extended blackouts.

It is not illegal to communicate for emergency reasons.
Even if you dont have a license. You could use a radio/tv station
if you needed to communicate unlicensed in an emergency.

This is hardly a true statement George. I'm sure that you are aware that Larry only handles a portion of the WUN Newsletter, and that a good part of the material presented there is submitted by the contributors.

The 245 can also be programed plus controlled using your computer. The
cable for the 95 isnt hard to find and theres nothing rare about it. I
have 4 cables here that I got for other radios that work with the 95.

The PRO-95, as shipped to Radio Shack, includes two battery holders:
one black, one yellow. The yellow one can be used to recharge NiCd and
NiMH batteries in the radio.

True, but was thinking more along the lines of carrying a 2-metre
handheld, which a lot of hams here tend to carry around. Haven't seen
any 80 meter handhelds, although if had a mobile covering all amateur
bands would no doubt be very useful in an emergency, especially if had
one of the old ones which would transmit outside amateur bands.

To save time will quote one of my earlier posts to misc.survivalism.

7==> Some of you may have seen a TV series called "Eye of the Storm". One episode dealt with the destruction of Darwin, Northern Territory, by Cyclone Tracy on Christmas Eve/ early Christmas morning 1974. No services including power and phones. Darwin had a huge Radio Australia shortwave transmitter, an RAAF air base, and a RAN navy base...but guess who got the first message out to the rest of Australia. A radio amateur, of course. :-)

The peak of the destruction was around 0330 to 0400, and from memory it wasn't until 0600 or 0700 that the media in the rest of the country announced the story. Not sure when the first message actually got out. Remarkably enough, death toll was only around 70.

The city was pretty well flattened. At the time of the cyclone, population was around 46,000 people and area was 233 square kilometres [about 90 square miles]. Depending on just where draw the boundaries of the city have the choice of two damage reports. One says that 3,000 houses survived out of 12,000, the other says that only 400 survived intact out of 8,200.

Unlike the US, Australia doesn't have a lot of cities or towns. The nearest towns of any size would have been Alice Springs to the south and Mt. Isa, Queensland to the southwest, both about 1,200 km [745 miles] away by road. So a massive airlift had to be organized. 30,000 people were airlifted out in first 8 days, women and children out in first 6 days.

No choice, really. No power, no phones, no city water, not much undamaged food. Darwin is tropical, being 12ï¿½27' south of the equator, and, since seasons are reversed here, was midsummer. Posted a bit on the evacuation in item #5 Newsgroups: misc.survivalism /// Subject: Re: severely wounded, administering morphine /// Date: Fri, 16 Jun 2000 09:36:39 +1000 ///
Message-ID:]

One of the reasons damage was so great is that most homes were built in what was then a very popular tropical style. Most of the house was on columns or pilings about 8 feet off the ground. At ground level was usually a brick bathroom and laundry, with an internal staircase up to the house. Rest of the area under the house was used as a carport. Main reason for this style of construction was for protection against tropical termites, which would even eat through the lead sheathing on telephone cables. Was also cooler than a building on ground level.

Not too great for resisting a cyclone such as Tracy, though. City has since been completely rebuilt, no sign of the cyclone damage.

>o A medium size dog requires about one gallon of water per day; a cat,
>about one pint.
>o City water is generally already treated. No additional treatment is
>necessary unless the system is compromised.

Which it is likely to be, especially following a power failure, flood
or earthquake. All city water systems have lots of major and minor
leaks. Household meter readings will never total the reading on the
master meter with the possible exception of a brand new system.

Minor leaks cannot be located and repaired until water shows up on the
surface, and in sandy or gravelly subsoils often has to be a large
leak before it will show up.

Pipes often run through soil with chemical or bacteriological
contamination, and the only thing that keeps the system safe is that
it is normally constantly pressurized. However, if the pressure
fails, then people drawing water from lines on a slope or hill will
cause a vacuum to be drawn on the mains and service lines drawing
contamination into the pipes.

In any disaster, is safer to assume contamination whether warnings
have been issued or not. Boiling will kill most if not all pathogenic

[disease causing] viruses, bacteria, etc. but will not remove most chemicals.

It is far safer to keep at least a three day supply of water, and many keep at least 2 weeks worth.

>13. Sanitary wipes or no rinse antibacterial hand wash for cleaning
>hands without water.
>14. No rinse shampoo for washing hair without water.
>15. A fully stocked first aid kit, including any specific prescription
>requirements.

Depending on nature and duration of disaster people who are dependent
on prescription medication often immediately rush out and refill
scrips whether have used existing scrips or not. Most prescription
medications are fairly expensive and some go out of date. Therefore,
most pharmacists don't carry much extra stock, often relying on almost
daily deliveries from wholesalers.

Most stock systems are electronic these days, and if power is out
pharmacies can easily run out of items without even realizing it,
wholesalers have difficulty filling orders if their systems are down,
or ordering more from manufacturers.

If really need a medication, would advise keeping at least two week
supply at all times.

Sorry, Brock, it is you that are wrong, and for the second time in a
matter of weeks. First time was when you accused me of being unable
to calculate the resonant length of a 1/4 wave vertical.

A quick advanced search on the net would have shown you that have
mentioned this in several posts, see following excerpt from one of the
early ones.

==========
From: "Wombat"
Subject: Re: Handheld Ham Radio Antenna(e) Questions
Date: 1999/03/01
Message-ID: <37042ace.32830265@news.ozemail.com.au>

[snip]

1==> Not familiar with these particular transceivers, the formula for
any full-length quarter wave whip working against a ground plane is
[in metric measurements]
Length in meters = 75 divided by operating frequency

The 2 metre band extends from 144 to 148 MHz. So if were cutting an antenna for center of this band at 146 MHz would be 75 / 146 = 0.513698630137. So a quarter-wave vertical would be roughly .513 metres long, or 513 mm. (millimeters) or 20.2244 inches.

75/ 440 = 170.455 mm or 6.71081inches.

2==> I assume you will be getting an amateur license before operate on these frequencies, as governments tend to take a dim view of unlicensed operation, and amateurs will go to considerable lengths to catch unlicensed operators.

3==> The above formula gives the theoretical lengths for a resonant 1/4 wave working against a ground plane. Some hand transceivers use the unit itself or the operators hand to act as a "ground plane" A "rubber ducky" antenna is often just a resonant 1/4 wave wound into a shorter coil, and does restrict range.
==========

Actually, have done a fair bit of experimentation with antennas. Corner reflectors, trough reflectors, yagis, arrays, non-resonant long wires, rhombics, etc.

You second mistake was the belief that code was still a requirement, although the International Telecommunications Union end this almost a month ago.

Were you involved in previous debates on need for current control on LEDs, the differences between an a electrochemical cell and a battery made up from same? Don't remember offhand, but you seem very anxious to catch me in a mistake. Why is this, Brock?

This is good math, but usually for a 1/4 wave radiator, 5% is subtracted for velocity factor, leaving the basic 1/4 wave radiator for 2m at approximately 19".

If you're looking for an incredibly full-featured Ham Transceiver, look no further than the Yaesu-817. 2-meter and 6-meter for local use, and then pretty much everything else for long distance. All you need is a good portable antenna and tuner and you'll never be out of touch. It's a "legal" QSL radio with it's maximum 5watt output and can be set up as a base station (many people have) or slip it into it's case and sling it over your shoulder for true portability.
But by the way, you need to get your Ham license before you get one. Reputable Ham dealers will NOT sell you a transceiver unless you furnish your call sign that matches the address you want them to mail it to.

Once get away from the big cities here 27 MHz is pretty useful,
especially when skip is running. On the inland side of the dividing
range, have talked to CB users in Perth and Japan using a standard 5
watt set and 6 foot helical on top of a vehicle.

Was near Tamworth NSW at the time, which is about 2,400 miles from
Perth and at least 4,000 miles from Japan.

27 MHz used to be widely used by farmers in rural areas, but largely
supplanted by an additional 40 channel FM CB service many years ago.

CITIZEN BAND RADIO
The Citizen Band Radio Service (CBRS) is a
two-way, short distance, voice communications
service that can be used by any person in
Australia. CB radios provide a cheap and
reliable means of communications.
The service operates in two distinct frequency
bandsï¿½the High Frequency (HF) band
(26.965 ï¿½ 27.405 MHz) and the Ultra High
Frequency (UHF) band (476.425-477.400 MHz).
DO I NEED A LICENCE?
No. The operation of Citizen Band radios is
authorized under the Citizen Band Radio
Stations Class Licence. Class licences do not
have to be applied for, and no licence fees are
payable.

More at:
<http://www.aca.gov.au/consumer_info/fact_sheets/consumer_fact_sheets/fsc20.pdf>

Many repeaters have been set up for UHF band, so a pretty good means
of communication if don't want to get an amateur license.

It's simple to throw together a set of field telephones from 2 common type American telephones (complete telephones). Simply connect the red and green wires with at least a 9 volt battery (up to 48 volts DC) in a big loop, but you'll have to play around with finding and adding the right value resistor to the loop to limit the volume. DC volts has a limited range tho. It's very complicated however, making a phone ring, so for your ringer you can salvage a couple door bells (or other DC volt device) to act as your ringer with the switch for each at the opposing end. You can pick up an ordinary phone at some dollar stores for about $7 each. Since you don't have to modify the phone itself, you can easily return it to common use.

Wouldn't consider it "very complicated" to make a phone ring as only
need to provide around 60 volts AC at 16 cycles or so.

There are not very many reputable ham dealers if that is the case. Many
will sell without asking if you are a ham. There is no US requirement that
you have a license to buy a transceiver , just to transmitt on one.

The key element is antenna height. If the repeater antenna is high enough, you can get quite good distances. Or if your own antenna is high enough, same thing. Naturally if both antennas are high, possible distances increase.

On the other hand, rubber duck antenna to rubber duck antenna at ground level, 2 to 5 miles will generally be the limit.

True, but the formula is only a rough guide anyway. Even at much
lower frequencies there are a few variables, and at VHF and UHF
wavelengths antenna length can be very critical.

On Australian UHF CB band can make a nice little handheld 3 element
Yagi out of a UHF socket and an old coathanger which will give around
3 or 4 dB gain. [Perfectionists would probably use aluminum, copper,
or even silver wire, though.]

Passing thought: Will Brock rush into print claiming that copper is a
better conductor than silver? :-)

Corner reflectors or arrays usually a better choice for more gain,
although even high gain rhrombics with theoretical 25 dB gain are a
manageable size at UHF if looking for really reliable point to point
communication.

Can make up 9 DB collinear omnidirectional verticals for UHF from RG-8
coax and plastic electrical conduit, although fiberglass is better.
Not much margin for error at these frequencies, though.

Can make a pretty decent UHF TV antenna using an phased array made up
of a chicken wire reflector and beer or soft drink cans as elements.
Not as good as an 18 element Yagi, but cheap and easy alternative.

Antennas can be great fun to play with. Was raised in a rural area,
and when TV first became available some local farmers were spending a
lot of money for tall masts and high gain Yagis to pull in a good VHF
signal.

However, I was highly amused when one old farmer who knew no antenna or propagation theory whatsoever pulled in nearly as good as signal by using a junked bedspring from a double bed, which he mounted on an old apple crate and leaned against a tree, using rubber from old inner tubes as insulation. He was just using flat 300 ohm lead in, split the antenna end and fitted with alligator clips, and played around with trial and error until found the proper feedpoint. He had no terrain advantage over the others and doubt if an expensive Yagi at a similar level would have worked much better.

His neighbors who had spent a lot more on their antennas weren't quite as amused, though. :-)

When I was a kid, a lot of amateurs used "home brew" equipment, but most amateurs these days seem to take their transceiver back to the dealer for anything more complicated than replacing an incandescent bulb or an LED indicator. :-)

The radio scanner enthusiast might consider building a large discone antenna if has the space. No gain, but good SWR over many decades of frequency range. Simple to build, size of disk and skirt not especially critical as long as large enough to cover lowest frequency of interest. Most libraries should have a reasonably current ARRL Antenna handbook.

Any one can legally buy a ham radio, licensed or not. They just can't transmit without a license. What the dealers are looking for is a shipping address that matches the billing address on the CREDIT CARD used to purchase the item.

They cannot refuse to sell you the radio merely because you have no license. Back when licenses took 3 months to arrive (which wasn't all that long ago), many people purchased their gear and set up their station while they waited for the license.

Probably, but is it a good idea to have something that is illegal to
use in most cases? Most hams are quite protective of their band
allocations and spend a lot of time tracking down illegal users.

Same thing happened here when UHF CB was introduced. CB sets on HF
and UHF had to be licensed at the time. Most people who went on UHF
when it was introduced were former users of HF Citizens Band and were
determined to keep the idiots and children off UHF.

Those who didn't use registered call signs, or otherwise didn't stick
to regulations found that those with call signs would simply refuse to
answer their transmissions. Having seen the 27 MHz service in cities
deteriorate to the point where it wasn't useful most of the day,
users of the new UHF service were determined that it didn't go the
same way.

Unlicensed operators were usually quickly reported to Department of
Communications, which is Australian equivalent of the F.C.C.

There were even viligantie groups doing transmitter hunts for illegal
operators. These were often persuaded to sell their sets and go back
to the 27 MHz "chicken band" if they couldn't bother to get a license
or use proper procedure.

Sometimes their equipment was sabatoged. However, am not about to
give advice how this can be done, of course. Not that I would stoop
to such activity, but some users enjoyed it. :-)

If really interested on using amateur radio equipment for emergency
use, should know at least some theory and practice. ....And as long
as going to do this, why not learn the regulations as well and get a
license?

I'm top posting this to avoid the tedium of snipping George's rant
against Larry

Last time I looked Larry's data on the WUN site was identical with the
current official DOD publications for the military HF frequencies.

The magazine 'he is associated with' may have printed some errors. Does
he blame George for the fact that many voters in Florida had trouble
voting? Let's just try to provide useful information for monitors and
quit the personal stuff.

The GHFS has undergone an offical name change, frequency and even site
changes since the 2001 date on George's page. Minor, but still changes.

George has great local Florida frequencies, but WUN is more current for
global military HF. You take the best of each bunch to keep current.

Dave

Guess that it is a differant point of view. Mine is that if someone pays
money for a transceiver (especially a low band one so they can practice
copying the code) they will have an investment and reason to get their
license so they can operate all the bands.

Even now as many take the test at hamfests and get the results back in a few days , it is nice to buy a rig at the hamfest and get it set up so you can use it in less than a week.

Anyone can legally use ham transceivers to receive and many do. Some go
this route rather than a receive only radio in anticipation of someday
testing for and receiving a ham license. People who break the rules and
transmit without a license are reported and eventually tracked down and
penalized by the FCC.

Just what percentage of us do you think could do that? and from DC
power? For about 98% of us it is "very complicated", and the one
electronics tech among us doesn't need any help.

"Major combat operations in Iraq have ended. In the battle
of Iraq, the United States and our allies have prevailed.
And now our coalition is engaged in securing and
reconstructing that country." - President Bush, May 1st.

As far as I know, a war was never declared. Absent that, all we had was
major hostilities and the president declared that over.

> (snip) Why do you jump to "lying"? That giant
> leap says more about you than it says about
> President Bush.

When UN inspectors in Iraq in the months leading up to the invasion were
clearly saying something contrary to his claims, it is not a major jump.
When the ongoing absence of evidence says otherwise, it is not a major jump.
When the president had access to massive intelligence resources and the
previous two sentences remain true, it is not a major jump. What other
conclusion can be reached other than a possibility the president was lying?

> I'm attacking you, Dwight, for calling the President
> a liar, not for questioning whether WMDs exist in
> Iraq. (snip)

Again, I did not say the president was lying. I said it appears he was
lying. Do you not understand basic English? Get a dictionary and look up the
word "appears." If, after that, you continue to claim I said Bush was a
liar, then you're simply the one not telling the truth here.

> (snip) Your thinking that "weapons unseen are weapons
> that don't exist" is irrational. (snip)

And your belief in unseen weapons that nobody can find is rational? Do you
realize how absurd your overall argument sounds? According to you, Saddam,
perhaps a magician, made those darn weapons disappear, but you know they're
really there somewhere and, given time, they'll be found. Until then, the
world just has to have faith that all this is true. After all, the president
said so and that should be enough.

If I want to practice faith, I'll go to church, Mark. But when it comes to the president, world affairs, and war, only a fool has faith in a man instead of seeking facts and evidence.

> Even if WMDs are never found, it would only mean
> that the whole world was mistaken and a murderous
> dictator is gone.

Do you really think the "whole world" agrees with your views? Boy, are you going to be really surprised when reality checks in.

> (snip) You are free to question if we should have
> invaded Iraq. (snip)

Gee, thanks for giving me that freedom, Mark. Isn't it somewhat pampas of you to attempt to define which freedoms I have and don't have?

> (snip) The only thing I object to is your calling the
> President, your President, your Commander In Chief,
> a liar unless you have substantial evidence. (snip)

Again, I did not say the president was lying. I said it appears he was lying. Do you not understand basic English? Again, get a dictionary and look up the word "appears." If, after that, you continue to claim I said he was a liar, then you're simply the one not telling the truth here.

> Damn! I wanted to trust your word but In the back of my
> mind I knew you were lying about making no more posts.

Nonsense, Mark. Contrary to your claim, my message clearly said I was willing to discuss the issue of Iraq and WMD, just not your endless negative comments about me.

But, in spite of that, you continue to post negative comments about me in an effort to draw attention away from the issues raised. Of course, that simply shows you have nothing substantial to back up your views.

Chuckle..I made up a private phone system when I was 13. Rang and
everything.

Then I discovered "field phones" Way much better.

Gunner

Have you noticed how these enviros have become alarmed by the
proliferation of large carnivores in the boonies? I saw one remark to
the effect that bears, for example, do not seem to know their place on
the "food chain." Why should they? Only man comes up with ideas like
a food chain, and with man the idea only makes sense because man is
armed. Without his weapons, man is by no means at the top of any food
chain. On the contrary, he is down in fourth or fifth spot, depending
upon the environment in which he lives. Primitive man was under no
illusions about this, nor are the backwoods folk in India today. To a
tiger, man is a morsel, as these unarmed joggers seem to be to a cougar,
upon occasion. Man is man because he is always armed. That is something
they do not teach in kindergarten, nor for that matter in high school. A
youth becomes a man when he is first presented with his own personal
weapon. That is his right of passage, and those who do not understand
that are questionable members of a free society.

Goodness, what a rant. With the hatred you have displayed towards your
fellow radio enthusiasts, I predict you are probably responsible for the juvenile
floods we have been experiencing here.

100's of emails. Give me a break. Hahaha. 3,000 unique hits daily..hahaha

How many people in the world you reckon listen to millair...shit, how many in this
group can even listen to milcom? I'll bet few here have 225-400am and less
even fewer <30mhz. Sheese.

Anyone wanting to enter the scene joins the appropriate mailing lists, like
where you suck any content we see on your site. Duh. Your posts here
prove you are green as hell, but 99% of the mil monitors are way to polite
to call your BS here and risk more NG floods.

Take your wishey washey site and lame attitude back to 11m loser boy, we
are tired of it.

>>So, once again ernie, you are wrong.
>>
>>http://www.arrl.org/pio/hamlic.html

Which states:
The General License:

The General class license grants some operating privileges on all
Amateur Radio bands and all operating modes. This license opens the
door to world-wide communications. Earning the General class license
requires passing a 35 question examination. General class licensees
must also have passed the Technician written examination and the five
word-per-minute Morse code test.

The Amateur Extra License:

The Amateur Extra class license conveys all available U.S. Amateur
Radio operating privileges on all bands and all modes. Earning the
license is more difficult; it requires passing a thorough 50 question
examination. Extra class licensees must also have passed all previous
license class written examinations, including the five word-per-minute

Morse code test.

So ernie,where specifically was I wrong? Code has not been "wiped."
It's been reduced to 5 WPM for the two higher class licenses required
for operation on the HF band.

>
>Sorry, Brock, it is you that are wrong, and for the second time in a

It was the part where you said that automobiles have quater wave
antennas that resonate at around 500 KHz. That my boy is a hell of an
antenna for a car.

I would ask if you are this stupid, but I know that you aren't.
You're just a troll ernie and not a very good one.

Wishey Washey?? Please explain. And suck my content from mailing
lists? You make my laught! My source aren't usenet or email lists.

However posts I've made to the email lists has been sucked and placed in
Monitoring Time. That happened three times this year and once a typo I
made even appeared. Was credit given? Nope....

Stick the NG Floods up your ass as it wasn't me, look at the IP
addresses and NG servers dumeass.

Oh for fucks sake, will you fucking people just STFU?

Bob, I believe, if you read Ernie's original post, he said it was wiped,
and then talked about using a 2m HT. The license to operate on 2m,
Technician, had its morse code requirement 'wiped' a few years ago.

Jesus fucking christ, the signal-to-noise ratio in here is getting
mighty fucking low. You fuckers just aren't happy if you aren't gaining
imaginary debating points on Usenet.

Oh I love the "green" comment. Well we all would be better informed if some of the old guys would help the younger ones when the younger ones ask. Shit, There are 5 new guys in Central Florida that were totally snubbed by the self proclaimed Florida MilAir expert when they kindly asked for help.

Its so funny that you bitch and complain about the content on my site but I don't see you lifting finger to help new guys. Where's your website or contribution to the hobby.

And the Flooding comment still has me rolling on the floor. Prove it. Here's where I can almost prove a negative. If it were me my ISP would have canned by account long ago forceing me to keep getting new ISP's. If you notice my IP address has been a Bell South IP address for nearly 3 years.....

Plus 'Edna' at least I use my real name and address on the groups, nothing here to hide.....

Really, as I regularly get anywhere from 4-15 miles range with my HT around here on simplex. Even further with the mobile rig on simplex at 40-45 watts, as far as 20-30 miles on average. At home, (better antenna and the height advantage) have gotten even further with 40-50 watts! Must be something wrong with your equipment.

This Modified Bearcat 3000 xlt will receive Tetra/Tetrapol/Apco
It will not demodulate or decode but it does scan and receive !
It has a built in dual-mode signal strength meter.
In addition it will also detect frequency-hopping and spread-spectrum
and videosignals in fact it detects everything that causes a electromagnetic radio-field
(between 25 and 1300 mhz).
There is a "nearfield detector" inside
It's also a perfect "bugdetector" .
It still works as a normal "old fashioned" scanner at the same time !

You can find information here :

www.tetrascanner.com

Was listening to Ch. 16 Marine band while driving around Racine, WI. Heard USCG base in Michigan yelling at some boaters to get off the calling channel: "We have the capability of tracking you down and finding you ... and you WILL be ARRESTED! Take your traffic off the calling channel ! ". He sounded pissed. It was a beautiful day and there were a LOT of boats out.

Also was hearing the NWS weather station out of Escanaba, MI perfectly while parked in the Racine, WI harbor parking lot. Some 250 miles or so right up the shore of Lake Michigan.

Not bad for a cheap Radio Shack scanner in the car with a mag mount cell phone antenna.

And it was even answered before that. All you need to do is go to:
http://www.milaircomms.com/ghfs.html and you won't have to wade through
many many pages of other info to get to the meat.

George

Edna I too am here in Florida. I have tried may times to polity ask where one can get information on milair frequencies. And I too have been snubbed. Shit I live only a few miles from the one of the biggest milair monitors in Florida and all I get from him is rude comments anytime I ask a question.

If it weren't for George I would have never gotten any help. He has also taken the time to teach me out he finds frequencies in the government sources. And thanks to that I have several scanners that activity monitor milair. You mention all these great email lists. If they're so great then why don't you share them so others can enjoy? I would like to know where I can get more information.

Why are all the old time monitors in the milair hobby grouchy old pricks? Then they hide behind fake names and email address here because they don't want us to know who they are.

Almost forgot, George was right about the Grove CD's. I bought both the Military and the Federal frequency ones. Nothing by crap. The military one has copies of the same GOVERNMENT docs George uses for his website. The only different is Grove's copies are several years outdated. The Federal CD was a total waste. No lists for individual areas, nothing! Just more outdated governemnt PDF files. Yea, I too have bought stuff from Grove and none of it panned out.

Keep up the good work George. Just remember thank you's are usually spoken softly. It's the bitchers who yell at the top of their lungs while hiding behind fake names and addresses.

Bill

I think that if one does a Google search in the groups for "Billy8156"
they'll find what looks like a strange symbiotic relationship with
George...

It's actually quite funny...

It would appear that Billy8156 is indeed George the shameless
self-promoter himself... LMAO

Look closely at the posts by Billy8156 that also contain the following:

Looking for good incall or outcall in the Daytona or surrounding areas.
Bill

By the way, Billy8156 (aka George Fetter) made the above post to
alt.sex.prostitution on 12/21/2001

Here's another post with the same type of thing:

Today 6/13/01 at 0800 Daytona has a sting going on. They have girls working

the streets as well as guys tring to pick up hookers. Sting is along
Ridgewood
Ave from Bellview to about Orange st.

It appears the Daytona Police have been runing stings in the morning from
about
8AM thru about 11AM. I have yet to see these operations run in the evening
hours.

Well you can stop laughing because Bill lives down the street from
me....He does his own thing, I do mine..... in fact I'm the one who
inteurduced Bill to computers. And yes he used mine to make many posts
until he got his own.

Hell if werenï¿½t for me we would have lost another scanning hobbiest due
to being snubbed buy the expertsï¿½.

BTW your google search would have turned this up as well as its already
been hashed out sometime agoï¿½..

But Steve thanks for your reposting the tag lines that were on my
computer when Bill made his posts. All the extra advertising helps.
But you forgot my other website, since youï¿½re into rebroadcasting tag
lines donï¿½t forget http://www.AuctionWholesaler.com

I love how people like overlook good information and rather dwell on
personal attacksï¿½.There are some experts on that subject right here on
this groups.

George

Sorry but George has a good website. Very easy to navagate. Much easier than any of the others mentioned. If it weren't for his a lot of what i find during searches would go unidentified. It would be more helpful if people stopped attack others works. I wouldn't blame anyone for taking down their websites because it seems like no one appreciates it when others try to help.

This is very sad especially for us who rely on websites for our scanning information.

As Roddy King said "can't we just get along?".

Sure, if we knew just who we were getting along with! It seems as though George (Billy8156) has multiple personalitys!

Have to figure out now just how many more he has! LOL

Or.... is pilotjoeturner just another of George's (Billy8156) aliases?

Something to certainly wonder about....

LMAO

Steven, never stopped to think that we worked for the same company. We both worked for PJM Interconnection. Yea, the same company who escaped any attacks regarding the Blackout how they pulled that one off I just don't know....Then they Praise Phil Harris.... Ops, could we be setting up for another east coast blackout? Looks like high loads and contingencies are pilling up.... You can monitoring transmission emergencies here: http://www.pjm.com/emergency_main.html

Ok little Steve while you continue your personal attacks I really have some meaningful work to do....bye...

One thing that is funny is that 'pilotjoeturner' has the same mis-spelling problem
that George and Billy8156 has....

It just gets funnier and funnier.... better quit whilst you are ahead George...

LMAO

Yep, George, Billy8156 and pilotjioeturner all share the same 'puter, all mis-spell things the same way... it's just to damn funny.

Polish up your act George and you can take it on the road.

Ya I'm tired of the personal attacks, lies and everything else that goes
along with the internet. If you noticed I've since stop posting my
military logs cause I was tired of attacks and then finding info in the
logs appearing in Larry's publications. Pretty much the Milcom list is
just a frequency/log collect for Monitoring Times.

Maybe I'll start posting logging again but I just don't know.

STEVE LARE: Its clear you don't like my website so here you go, would
you like me to take it down? yes or no. Pretty simple. If you wish
I'll take it down. But before you answer you might want to consider
what inforamtion I could put in its place... ;)

What I find interesting George, is that in reading the Billy8156 messages I found one posted on April 19, 2001 actually looking for George Fetter, when on April 18, 2001, Billy8156 has your ad for the eBay thing at the bottom.

The April 19 post almost seems like an advertisement for George and some product he might be offering in itself, but why would Billy be looking for you on April 19, when he already knows you based on the April 18 post?

Very clever that George (Billie8156) Fetter.

LMAO....

Good Grief Guys, Here are the basic essentials:

USAF HIGH FREQUENCY GLOBAL COMMUNICATIONS SYSTEM (HF-GCS)

A worldwide network of 15 high-powered HF stations providing global
command and control for the US military. HF-GCS provides:
Phone patches and message relay
HF data support
Broadcasts - includes EAM (Emergency Action Messages)
etc.

Frequencies currently used are:
4724, 6712, 6739, 8992, 11175, 13200, 15016.
((8992 and 11175 tend to be most active))

Ground stations in the system are:
Andrews, Ascension, Croughton, Diego Garcia, Elemndorf, Guam, Hawaii,
Keflavik, Lajes, McClellan, Offutt, Puerto Rico, Sigonella, Thule,
Yokota.

Ground stations have additional 'discrete' frequencies which may be used
as required.

Not all stations use all frequencies, and this is a few months old so
some changes may have been made but it is the essentials -

- without having to sort though pages of other stuff.

There is also a group of ALE (Automatic Link Establishment) frequencies
but in order to keep it simple I've just included the basics.

Dave

Radio Shack use to sell a 4" unamplified speaker for about $14.00. I don't think they have this one any more. I have several and they did really great for both base and handhelds, much improvement in audio quality.

Radio Shack does still sell a 4" amplified speaker. You might want to check on that as it was the same thing but just with an audio amp.

Radio Shack also still sells a 2 1/2" speaker. I have 3 of those and really don't like them at all. In fact my handhelds speaker produced better audio.

I have a SignaLink SL-1 for sale that has only been used to decode, never transmit. It is in excellent condition and comes with an un-terminated connector (RJ45 on one end, open on the other), jumper wires, the original manual and original box.

Asking $30.00, you ship.

Please contact me off list if interested.

All good advice. Can get inline boosters for car radios, but as Lou
points out won't help the signal to noise ratio.

On car radio, are you talking about AM, SW, or FM?

The best non-directional antenna is one that is resonant at the
desired frequency, and the metric formula for this is very simple.

The usual whip antenna on a car is a quarter wave vertical operating
against a ground plane. The formula for resonant frequency for a 1/4
wave antenna is 75 / frequency in MHz.

####### Now Brock, point out where this claims that the quarter wave
antenna on a car is anywhere near resonant frequency. If you are

going to criticise my posts at least try to read them carefully enough to get the meaning and stop jumping to conclusions. Better yet, why don't you simply killfile me??? ######

Using a resonant antenna is very important for transmission, but also quite significant for reception.

So lets assume that you want to listen to an FM station at 100 MHz [or megacycles] on a car radio. Resonant length in metres for 1/4 wave vertical would be 75/100 = 0.75 metres = 75 centimeters which in imperial measurement would be 29.53 inches.

Which is roughly correct

Easy to see that this no problem for a car antenna. However, suppose we are talking about a SW radio for 27 MHz CB? 75/27= ~ 2.77 metres, =~270 centimeters = 106.3 inches = ~ 8.9 feet.

If want anything near perfect resonance and omnidirectional coverage for an 8.9 foot vertical need at least as much ground plane or radials at the base of it to form a "counterpoise" [More or less of an "electrical mirror image" of the antenna, or "the other half of it".]

This is also reasonably correct

However, highways aren't designed for vehicles almost 18 feet wide, so will have to accept some compromise.

#####The reason isn't only the ground plane, of course. Most overhead structures such as roof over pumps in service stations and many highway overpasses, pedestrian bridges, etc. don't allow for height of vehicle roof plus ~ 8.09 feet#####

Much worse at AM frequencies, of course. AM band runs from around .53 to 1.6 Mhz, or 530 to 1600 Khz. So for an AM station at 1000 KHz or 1 MHz, the resonant length would be 75/1 = 75 metres.

One foot = 0.3048 metres, so 75 * .3048 = 22.86 feet, the length of your resonant vertical, so if you mounted it dead center in the metal roof of your vehicle, the vehicle would have to be 45.72 feet wide.

[Yes, can get by using physically shorter resonant antennas by winding this as a helical coil on a physically shorter form, but efficiency falls off drastically for shorter lengths.

If assume that the feedline is correctly matched to an antenna of the proper length, and had enough surrounding metal around for it as a ground plane efficiency might approach 100%.

For 27 MHz, can wind that 8.9 feet if wire on a 6 foot long form, but your ground plane still wont be adequate, so efficiency will probably be 70 or 80% at best. Can even wind it on a 2 foot form, but then efficiency will drop to around 10%.]

Yes, going into more detail here than is necessary, but there may
be some people still fooling around with 27 MHz CB in the group.

######Which is why went into such detail. But again note that there
is no claim in the post that the 1/4 wave vertical receiving antenna
on a vehicle is anywhere near resonant at lower frequencies.######

OK, for reception you don't need a fully efficient resonant antenna on
your vehicle, and no need to try to match to it. A long helical wound
fiberglass antenna may be the best you can do.

Now if talking a fixed station antenna, you have a lot more
flexibility. You can go for long wire antennas, quads, or even
rhombics, terminated or unterminated. [For details on such antennas,
see current ARRL antenna manual]

Nice to know all this stuff, but if the average SWL listener my
personal advice for broadcast band or shortwave is an active antenna
such as a Datong. Basically, a wideband 1/2 wave dipole with
switchable gain.

The tapered stainless whips on the datong dipole are nowhere
near resonant lengths for most frequencies either. From memory, about
5 1/2 feet long. #######

Used vertically, it is omnidirectional. Used horizontally, highly
directional, so useful for nulling out noise sources.

Can be mounted on larger vehicles for mobile reception

Searched the web for
Datong active antenna
Results 1 - 10 of about 189. Search took 0.17 seconds.

Hope this will help.

However, I don't claim to be an expert on antennas. Others on the
group would know more than I do.

Generalists are, by definition, generalists.

People like Gunner have claimed to be "generalists" but in some areas
obviously have some areas of specialization. For example, he would
know far more about metalwork than I would.

And if you wanted to know more about propaganda, lies, killing, and
general asshole behavior, would probably be difficult to improve on
this particular resident of California. :-)

Although I suspect that he is now known nationwide or even worldwide.

erniegalts

>
>I would ask if you are this stupid, but I know that you aren't.
>You're just a troll ernie and not a very good one.

When want you opinion, Brock, will ask it.

....And you are still in error on both the resonant antenna and the requirement for morse. :-)

erniegalts

Oops...

You got your math backward here.. the correct computation would be 75
(length in meters) x 3.28 (feet per meter)= 246.06 feet for a 1/4 wave
radiator at 1 MHz (not adjusting for velocity factor).

Yes, but George certainly doesn't have a license to fly helo's does he? As far as I know he only has the ability to fly small aircraft, and even that's a scary enough thought. Especially when one of his multiple personalities takes over behind the stick.

If you want to broadcast your name and address all over the internet, have at it.
I don't and never will. Lots of hams have posted against your buddy with their call signs.
What is the big deal here, I know about as much as you from your freaking
hotmail address as you do from my fake nym. Some people.

Now there's a thought... convincing the FAA that Georgie has multiple personalities... Hmmmmmmmmm... Perhaps they are not to interested in having things like that occuring, especially in light of todays security concerns.

Actually, it is what they say. I believe it is even a question on the
test for the Tech. Class license but I really don't feel like reading
the entire question pool right now.

Actually..here it is from an ARRL publication NOW YOU'RE TALKING used
to study for the exam. After a paragraph recognizing that some radios
can transmit out of band and warning of false or deceptive signals it
says:

"If you should require immediate emergency help, and you're using a
voice mode, call MAYDAY. Use whatever frequency offers the best
chance of getting a useful answer"

"In a life or property-threatening emergency, you may send a distress
call on any frequency, even outside the amateur bands, if you think
doing so will bring help faster."

"If you receive a distress signal, you are also allowed to transmit on
any frequency to provide assistance."

This is all under subelement T1E

KB9WFK

"You are behaving like a troll, disguising your attacks as reasonable
discussion."

Sure you did George.

> So you do just swing with your wife? Are you into full swaping? Or are
> you gay?

Are you homophobic too George?

> Which form of swing are you into. I didn't feel looking at
> the 114 posts you made to the swinger group. Or I know, you swing with
> Steve out there in Ohio (or is that HOIo).....

You have spent a lot of time on this. Sounds like George Fetter is a
wanna-be swinger or just jealous.

Tell the group about 'your wife' George.

> But one post did stick out which you replyed to, the subject:
> "Two skanky Ho's looking for action in Florida"

Got you all hot and sweaty didn't it?

> Then you mentioned
> "kids".... I bet if I look at the Pedophile website I'll see your
> picture.....

Spend a lot of time there too George.

You protest too much little man. A normal person would just ignore the
things you have obsessed over. Your record according to Google says plenty
about you.

Now STFU George and take your public masturbation someplace else.

That is what is getting everyone in trouble. It is only as long as you stay
in the ham bands. That is all that part 97 is for. Once you move out of
the ham bands , then that rule and the rest of part 97 does not apply.

There are actually three classes of distress messages and AFIK all
have priority over any normal traffic. However, I have my doubts that
all amateurs would necessarily recognize them, let alone users of CB
or most other two way services.

I purchased the Uniden Sportcat 180 scanner recently, mainly to listen to the airplanes and airport tower (I live in Guelph, Ontario, about one hour west of Toronto). I have found the Toronto and Hamilton airport frequencies, and have enjoyed listening to these, but I would like to hear more. Searching through the various bands does not produce much. I am new to all this -I don't know what repeaters and other such things are all about, and would appreciate it if someone could point me in a direction where I could learn more. Thank you for any help.

I am looking for manuals or copys.
Wondering if anyone has any for sale or might know of a place that sells reprints.
The radios are as follows:

Regency: R806, HX1000 Handheld, R1050, TMR-8, ACT-R-106

Realistic: PRO-47

Bearcat: BCH-2, BC210,

GE: Searcher 2plus2

Also looking for scanner crystals

Email hug-inspector@juno.com for further info.

Source record: 26792

Note: All Combat Air Patrol callsigns/freqs and security-sensitive
information have been removed from this log before posting.

Tuesday, 19 August 2003
Normalcy seems to be returning to Mil acft stateside operations.
Comms are plentiful here again, and units seem to have returned
to their training routines. Pinecastle and Avon Ranges and the
offshore Whiskey areas were all busy today.
NASA acft are finally back too, with the astronauts
arriving/departing
in their T-38s almost every day.
To quote from the song Summertime, "Fish are jumping" too. Worked
on my boat engine with my Pro-43 in hand, and while out on my pier
received Avon Park bombing/strafing comms wonderfully on a Radio
Shack
center-loaded whip. No, Walt, I did not tie a catfish line to the
whip.

LF 161: P-3C Jacksonville VP-16 "War Eagles" Sqdn
1:47am: Passes "Mode 3 is 0733" to OakGrove. OakGrove responds "I see you as
sweet [on Modes] 2, 3 and 4."
[364.2]

RED TALON: Same acft as LF 161
1:51am: Comms with Fiddle (NAS Jax TSCC).
[285.0]

MAKO 11: F-16, Homestead AFRC 482FW
10:07am: Work at Avon Park Bombing Range: low-drag, high-drag bombing,
strafing; reports Maint Codes to Mr Mako when RTB.
[292.2, 138.125, 138.025]

NASA 4: G-1159 Gulfstream II, NASA-KSC
10:08am: Departs Patrick.
10:26am: Lands Patrick.
[133.75]

SNAKEs: F-15, FL-ANG 125FW Jacksonville IAP
10:35am: Air-air.
[234.8]

3E 251: T-34C, Whiting Field TAW-5
10:40pm: Comms from OM and YL pilot; concerns for wx.
[281.5; 255.4]

NASA 963: T-38N #59-1603, Johnson Space Ctr, Houston TX
10:43am: Lands NASA-KSC Shuttle Landing Facility.

4:10pm: Departs SLF to Gulfport. OM & YL astronauts chat about concern for wx, and they contact Metro at Pensacola (4:43pm) and decide to divert there.
[128.55, 124.8, 235.4, 359.6]
NOTE: Most of you know this as my favorite NASA T-38; it was the 1st production T-38A off the production line, and had been used as a drone before NASA rescued her.

JS 074: C-9B, NAS Atlanta VR-46 "Eagles" Sqdn
10:44am: Area transition southward; "direct Grand Turk" (Bahamas).
[119.825 Miami Ctr @ Melbourne Hi-alt, 135.075 Same, 134.8 Miami Ctr @ Nassau Hi-alt]

BOXER 42: C-40C, Andrews DC-ANG 113AW 201ALS
10:52am: Area transition southward.
[135.075, 134.8 Miami Ctr @ Nassau Hi-alt]

NASA 960: T-38N #70-1552, Johnson Space Ctr, Houston.
11:04am: Lands Shuttle Landing Facility.

HN 424: SH-60B, Mayport NAF HSL-42 "Proud Warriors" Sqdn
11:13am:Lands Patrick.
[133.75]

MUSTANG 01: CE-208B Cessna Caravan #208B0163, US State Dept, Intl Narcotics Mission, Patrick AFB.
11:15am; Local ops, including approaches at Melbourne IAP.
[133.75, 118.2]

CG AUX ACFT 13Y (N9513Y) Beechcraft P-35, Orlando FL
12:14pm: Port Canaveral Security overflight, asks if Aux Vessel Irish Mist is on scene; RTBs Jacksonville. Comms with CG Sta Cape Canaveral and CG Sta Mayport.
[157.175]

PAT 432: US Army Priority Air Transport
12:51pm: Area transition.

Check Radio Shack as they have a wide variety of "wall wart" transformers
and most likely have the proper tip to fit the socket on the scanner.
Usually anywhere from $7.95-19.95 depending on the voltage etc. required.
Just make sure you have:

The proper voltage needed.
The proper minimum necessary amperage needed.
The proper sized tip to go on the end of the wall wart wire.
The polarity of the tip properly set.

Other than that, I personally save wall wart transformers from equipment
that no longer works or do not have. Having those extra ones laying around
has come in handy. Never throw those things out even if what it belongs to
doesn't work anymore.

Radio Shack's web site often has text copies of the manuals for it's products. The pictures and charts are usually missing from these copies, but they do contain the basic operating instructions and often a parts blow-up with Radio Shack replacement part numbers. On the web site, search for "pro-47" or manuals.

If memory serves me right, the charges were eventually reduced or
dropped, but he never did get his equipment back. Whatever the
outcome, the FCC made it very clear that transmitting out of band was
a bad thing to do and they would make your life miserable for awhile.

I agree with George, just add a better external speaker. Like he said, you can find several to choose from at Radio Shack. The non-amplified ones work just fine, or look at the amplified ones.

If you want to get really fancy, try one of those amplified speakers for walkman-style portable radios with a stereo-to-mono adapter (the speaker is stereo, the scanner is mono). I've had great success with some of the cheaper ones - the output of the cheap ones best match the voice frequencies and two speakers are certainly easy to hear.

I have a mint with box, manual, antenna, software / serial cable, BC780XLT.
Has never left the desk. Photos upon request. I need the money for another
radio purchase. Paypal best way. Buyer can pay exact shipping from 32780

Thanks

They've misinformed you. The black holder is [supposed to be] inside
the battery compartment in the radio. The yellow holder is [supposed
to be] inside a small cardboard enclosure, at one end of the retail
box. Every PRO-9x (92,93,95,etc.) I've received was arranged like
this.

Actually the real root of the problem that set everybody off was that he had
modified the radio for out of band operation with no justification for
having done so. i.e. He was not a member of MARS, or CAP, or whatever some
of the other organizations are that amateurs can participate in.

Do aircraft and folks on the ground talk to each other on 2 different
frequencies? I seem to hear the ground controllers and the actual pilot on
2 separate frequencies talking to each other.

Also, there seem to be a large number of frequencies to listen to regarding
aircraft around here, but which should I concentrate on? I'm just
interested in listening to the planes and the ground controllers and such.

Aviation communications are generally Simplex, i.e., you listen and talk on the same frequency. You should hear both sides of the conversation on the same frequency.

You can hear inflight aircraft for quite a distance. An aircraft at an altitude of 3000' above ground level has a line-of-sight distance of ~80 miles. An aircraft at an altitude of 30,000' has a line-of-sight distance of ~250 miles.

The on-the-ground range of the ground based stations is quite small, typically a few miles. And, other than tower, stations talking to inflight aircraft may not be located on the airport.

Here is what you're hearing which probably gave the impression
of ATC and the aircraft using two different freq.

This is common at night time where there is less
traffic and less controllers on duty. Since you didn't mention any
frequencies I'll use this as an example, this was an actually example of
someone with the same question who lives in Boston, MA. Lets say
you're hearing the ground controller (ATC) on 124.4 but you're hearing
the aircraft answering on 118.25. One controller is probably
controlling three different sectors. The controller in our example is
keying up
the mike and his voice is being broadcast on 120.6, 118.25, 133.0, and
124.4 at the same time. The antenna site for 124.4 is probably near you
as that is the only one you are hearing. The other three antenna sites
are located near the center of the North sector, West sector, and South
sector, too far away from you to hear. So, you might hear Boston say
"Delta 411 decend to one four thousand" on 124.4000. However it was
also broadcast on the three other freqs but you were just too far away
from those antennas to hear it. But now you can hear Delta 411 on
118.25 say "out of 210 for one four thousand Delta 411". You heard the
Deltas reply because he was much higher and in line of site with your
radio. This would give the impression of Duplex but in reality Delta
hear ATC on 118.25.

If you tell us where you're located someone here might be able to help
you with local ATC freqs for your area.

Excellent answer! I have also heard the same controller's voice being
transmitted on civilian and military frequencies simultaneously.

> exemption for an emergency.

That not quite correct. The rules do allow an Amateur the use of "any
means of radio communications at its disposal," which would clearly include
the use of equipment capable of operating on frequencies outside the amateur
bands (see last paragraph below).

PART 97--AMATEUR RADIO SERVICE
Subpart E--Providing Emergency Communications
Sec. 97.403--Safety of life and protection of property.

No provision of these rules prevents the use by an
amateur station of any means of radio communications at
its disposal to provide essential communication needs
in connection with the immediate safety of human life
and immediate protection of property when normal
communication systems are not available.

Sec. 97.405 Station in distress.

(a) No provision of these rules prevents the use by an
amateur station in distress of any means at its disposal
to attract attention, make known its condition and

location, and obtain assistance.
(b) No provision of these rules prevents the use by a station, in the exceptional circumstances described in paragraph (a) of this section, of any means of radio communications at its disposal to assist a station in distress.

Other rules (97.401 and 97.407) cover emergency operations during a disaster. Subpart E, Section 2.405, contains additional guidance concerning emergency operations.

The operator you describe was more likely cited for having equipment improperly modified to transmit outside the Amateur Bands, not for actually using those out-of-band frequencies in the situation described. I realize this sounds like a Catch-22 situation, but those are the rules. In this case, if the operator had used another radio, a radio approved for those frequencies, there would have been no rule violation.

Yes that is normal as well. One reason for that is lets say a Military
aircraft is coming up on an ATC freq, the military aircraft can hear the
controller talking to a civilian plane so the military aircraft will
wait for him to stop talking. Then he knows the freqs are clear. If
ATC didn't do that a military plane could call up on freq however the
same controler would be on the civialian freq talking at the same time
causing ATC to miss the military's call.

It is common with flight service stations. The FSS transmits on 122.0 and the pilot may be required to transmit on 122.1.

A great, succinct answer that makes it clear to many of us who may
have suspected something like this, but weren't quite smart enough to
ask the question in just the right way in order to have it make sense.
Hats off to George.

I hope this link still works.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3041491649&category=4671

Can anyone tell me if there is any reason for me to buy this item? When I finally do get my antenna up, it will be grounded to a copper ground rod, and there will be three lightning arresting and surge supressing devices on my mains. On the other hand, I do like the idea of having static build up on coax bled to ground. But does this product really work? Anyone using them?

Thanks.

Not sure about the 94 but on my Pro-95 the CB band is included in the preset
search banks. For trucker traffic you'll want 27.185.
I find the sensitivity on this band to be very poor on my Pro-95. Good luck.

I put together an amplified speaker last night. Consisted of a 50K pot, 12 watt amp module (size about 1.5 inches long, 1 inch high and 1 inch wide), and a stereo speaker. Very easy to construct, and made a huge difference in audio levels - even with the volume at only 1/2 way on the pot, and about 1/4 on the radio, I had no problems hearing it from outside on the street (shack is at the back of the house). I have another two amp kits which will end up in the car. Ok it is a PITA to run power to the amp in the car (speakers and radios are mainly in an overhead console), but I will probably take the power off the power feeds for the radios. Only problem I am having at the moment is with the radio off, I can hear the local AM radio station (at a low volume), but will have a play around and see what I can do to fix it.

I don't think anyone actually 'hates' George. However, it needs to be pointed out that George likes to post as different characters other than himself. Such as Billy 8156, pilotjoeturner, and perhaps others as yet undiscovered. He does it here, and also on the MilCom list.

Also, the excercise started when George made false statements, and put down those who were pointing folks to more complete up-to-date data, data that was not to be found on HIS website. And that tends to upset George, especially when one of those involved happens to be affiliated with Grove Enterprises.

George has 'issues'. Get over it.

Actually in cases where "duplexed" is used for FSS FSS at those times transmits via a VOR (108-118 MHz) that is close to the plane. The pilot will tune his COM radio to 122.0, 122.1 or what ever other frequency is is listed on the sectional above the VOR's information block. The pilot whould then transmit on that frequency.

FSS would receive the pilot on 122.0, 122.1 etc. The pilot however would turn up the volumn on his NAV radio and have it tuned to closest VOR to his location, FSS would be transmitting through the VOR on the VOR's frequency via a dedicated phone line link.

Great example where I have actual experience with this was when I was living and flying out of the Lancaster, PA area. The Lancaster VOR freq (LRP) is 117.3 MHz however FSS was to far away (located in Williamsport, PA) to be heard by an aircraft at low altitudes. However since the plane was flying at 1,000' or higher FSS could receive my signal on 122.0 however I would be two far away to hear FSS's reply on 122.0 so I would be listening for the reply on 117.3 as the Lancaster VOR was only a few miles away where has FSS in Williamsport was about 100 miles away.

Now so FSS actually knows that you're expecting them to reply on a VOR freq instead of direct on 122.0 here is how you would make your radio call "Williamsport Radio, Cherokee 9335W receiving Lancaster VOR".

I certainly do not claim to be a computer geek, but when looking at headers
they do not seem to support your comments that it is one and the same person
making the posts. For a start, there are two seperate ISP's plus google
(which could be either of the other two admittedly).
Personally I have seen nothing but helpful comments from George other than
when he has been hassled by others, and even then he has been very subdued
in his responses - which is better than I would have reacted.

GeorgeF wrote:

In my last post I used the term NAV and COM. Let me clearify what they really are. An aircraft (anything from a 4 seat Cessna to a Boeing 747, it doesn't matter the radios are just about the same) generally has 2 NAV/COM radios. Each NAV/COM is in reality 2 radios in one box, the NAV side and the COM side. The NAV side, which stands for Navigation is a receiver only and will receive VOR (naviational radio beacons) signals from 107-118 MHz. The COM side, which stands for Communication is a transceiver used for talking to ATC (Air Traffic Control), FSS (Flight Service Station), or other aircraft. This radio will tune 118-136 MHz.

If you look at this picture: http://www.wingsonline.com/sterubp.jpg you'll see part of a Cessna instrument panal. On the right side starting at the top you'll see a box with lots of little buttons. This is the audio/mike panel. It controls the where the audio from all the radios goes, you can have one or all radios going to the overhead speaker or to headphones. It also controls which transceiver your mike would be connected to. In reality most small 4 seat planes can have up to 9 radios:
COM-1 for communications
COM-2 for communications
NAV-1 for VOR, ILS (instrument landing system) navigation
NAV-2 for VOR navigation
ADF Automatic Direction Finder (usually tunes 200 KHz to 1600 KHz)
DME Distance Measuring Equipment, using radio wave to measure distant to a VORTAC
MBR - Marker Beacon Receiver, used as part of the ILS system
TRANSPORDER - Send's code and altitute to ATC's radar screen
ELT - Emergency Locator Transmitter (transmits on 121.5 & 243.0 MHz)

And today many small planes have GPS so that would be the 10th radio on board....

In the picture I refered to above if you look under the audio panal you'll see two NAV/COMs, since they're turned off they just look like 4 independent radios and in reality that is what they are.

Hope you enjoy the "Aircraft Radios-101" course...There will be a quiz later...

Not bad at all. I'm only 50 miles from Escanaba, MI, and generally I have a hard time picking up the NWS from there. For some strange reason, it comes in better on my hand held scanner (with the factory duck) than it does on my weather radio! What a waist of money that was... The weather radio has a bigger antenna that I would assume is the right size to receive that band... Oh well...

> them?

If you want to avoid building up a static charge
on your antenna, use an antenna that is at "DC ground."
Discones and Ventennas are not at DC ground.

I have a few of the spark gap arrestors like those
you cited. It takes a high voltage to jump the air gap
inside them. Using a more sophisticated receiver protector
with a gas cartridge will discharge the voltage to ground
at a lower voltage level than an air gap and provide more protection.

I use an older Alpha Delta Transi Trap on my shortwave receiver.
It contains a replaceable gas plug. A newer version is
show at http://www.alphadeltacom.com/tt3g50.html

Disconnect your scanner from the antenna when not in use,
especially during lightning season.

I think a careful search will show you that George developed the pilotjoeturner nick (an AOL account) when dealing with Allan Stern, another individual that George has 'issues' with, other than Grove Enterprises. Otherwise pilotjoe is a noshow anywhere else, at least on Google.

He developed Billy8156 (yahoo.com) apparently to do some discreet inquiries regarding a hobby shop where he (George) had worked, and also for making other inquiries where he did not want it to be known that it was him.

It seems very odd that Billy and George are so closely tied together, originally from PA, then moving to Florida, working at the same place, etc. But not so odd when one realises that they are one and the same.

George claims he lives just down the street, but in at least in one Google message, Billy claimed to live 50 miles away. It's just a very strange picture. And when one sees the post from Billy8156 looking for George Fetter but in a way touting some model aircraft stuff George was involved in that has the Licensed4Fun stuff at the bottom one becomes suspicious. Why was Billy looking for George, when he was already involved in Licensed4Fun.com and obviously knew George, and according to George they worked together?

Shortly thereafter, George must have realised his mistake, and the Licensed4Fun stuff at the bottom of Billy8156 posts disappears.

And according to George he already knew Billy and that they worked together, etc. And even makes up the convenient excuse that Billy was using his 'puter. That is interesting also, as they both have the same exact habit of hitting the wrong keys on the keyboard, and in some messages they say the same things, especially about Grove, almost word for word.

Since he has these (and probably other) characters made up, they are there to help defend him and pat him on the back when required.

I've got a feeling that Billy8156 and pilotjoeturner will probably go into retirement now, and be replaced by other FOG's (Friends Of George).

I've received a few emails from individuals indicating that they to in the past have checked the IP addresses of Billy8156 and that they come up the same as Georges. I've also seen at least one copy of an email from George with an interesting 'excuse' as to why this was so. Rubbish!

At any rate, it's quite interesting.

Thanks for your kind comments. Its hard to not get emotional when people attempt to perform character assassination. However as grown ups do we look past those who feel threatened or have nothing better to do.

Yes, Bill and I have known each other, and we live close to each other and have worked for the same companies in the past. We also share some of the same hobbies and have worked on business dealings together as well. As far as Pilot Joe goes I don't know him other than he is new to the area.

I now just forward Steve Lare's offtop and flame provoking comments to abuse@supernews.com as his recent 20+ posts are in clear violation of the Supernews User Agreement. Each and every flame from him has been forwarded and every new one will be as well. If anyone else is sick and tired of him making endless and off topic posts you can report him to abuse@supernews.com as that is who is newsgroup account is with.

There are two ways to keep the newsgroups free of SPAM and off topic items and that is 1) Report the offenders to their newsgroup provider which is avilable in the headers. 2) Do not respond to off topic of SPAM posts.

Oh, one last thing, as most people know I'm not affraid to speak out about a product or company of which I do not like. I've done it before and will do it when ever I see/find an item which I like or don't like. I don't need to create fake accounts to hide behind when I say I don't like product 'X', this is clear from my many posting both pro and con regarding various products and companies I've dealt with. I'm not affraid to speak out.

Thanks for your support
George

He sure seems to know you George, he knows you are a pilot. And yes, he's 'new to the area', you created him on or about May 31, 2003 so you could make a query here regarding Allan Stern. LMAO It's only a simple Google search away!

You are sure one heck of a funny guy George.

You don't know him? Here is his very first post:

From: Pilotjoeturner (pilotjoeturner@aol.com)
Subject: Who is this Allan Stern guy?
Newsgroups: rec.radio.scanner
Date: 2003-05-31 12:46:33 PST

I see this name all over this group but never heard of him till now. Just got
started into scanning and have received great help from George.

Who is the Allan Stern charactor and what's his claim to radio fame
- - - - - - -

That's the guy's very first post here. LOL, he's seen Allan Stern all over the
newsgroup, but never heard of him till now? What a hoot George.

And he's received so much great help from you. And yet you don't know him? I'm
sure he got it all from your website. Never emailed you, never ever posed a
question to the group other than to inquire about Allan Stern? LMAO George.

As I said, YOU created pilotjoeturner.

And by the way, there was nothing wrong with the way you spelled 'your', simply improper usage of the word 'your'. Did I ever mention your spelling? NO.

Just finished reading Bill Cheek's Ultimate Scanner - unfortunately a few years too late.

What is the best computer interface for the RS Pro 2006 these days?

Thanks, Lee

I'll have to agree with you here George, when discussing 'tread' one should be in
rec.autos.tires LMAO

What really gives you away in all your pseudonyms George is the constant
mis-spelling, that along with the other obvious links.

Uh, read my previous post about spelling! It had nothing to do with spelling,
but the proper use of the word 'your' vs. 'you're'.

Now get with it!

It's just another thing that makes a post suspect as being from GeorgeF.

Read closer. Part 97 is only for ham radio. It is not rules for any other service. Note it says THESE RULES. That means you STAY in the HAM BANDS. Anything out ot the ham bands is not covered in THESE RULES.

There are other rules and Parts for the other frequencies. Just as what may be legal in your state may not be legal in another state. YOu have to follow the rules of the state you are in and not the rules of your state when out of your state.

It all depends on what you want the interface to do.

I like the one Bill has as it programs my scanner, all 6,400 channels,
although it is the Pro-2004 that I have.

Let me quote again the ARRL reference for taking the FCC test.

"In a life or property-threatening emergency, you may send a distress
call on any frequency, even outside the amateur bands, if you think
doing so will bring help faster."

EVEN OUTSIDE THE AMATEUR BANDS
As this is a Federal law there can be no local or state laws that
supercede it.

I would think that when blacked-out, there would be little need for communicating. :)

However, less drinking of hard liquor is advised!

As far as power outages go, the lower the tech, and the less infrastructure dependency, the better.

Yet, as others have mentioned, VHF/UHF amateur radio is often a good choice under these circumstances because a substantial number of repeaters have backup power to ride out such outages -- precisely so it works during a power blackout. Of course, as working communications resources become scarce due to blackout, this sort of thing is not for chit-chat or non-emergency purposes.

The best plan is to have a plan. Make sure everybody knows a short list of places to go to meet in case of a problem. Perhaps designate a known location to wait until everybody assembles, if the outage/emergency/etc. lasts for a long while. Then you don't need to communicate the bits about "where to meet" and only need to go there.

If your goal is to just keep in touch with friends and family, a GMRS or even FRS radio may be your only realistic option. Fortunately, power outages that last for long periods and strand people far from home are not common, even when crooked energy profiteers manipulate the supplies to create fraudulent blackout conditions for fun and profit. :)

Amen. If one is out of communication, one is out of communication.

This focus on how people can "communicate with their loved ones," which is what I hear many here and in the press talking about, is bullshit.

You'll be home when you get home. Period. Such was it in during the Punic Wars, the Crusades, WW II, and the War Against Some Terrorists.

Yeah, those at home may feel some anguish. So? Not a survival issue.

> If your goal is to just keep in touch with friends and
> family, a GMRS or even FRS radio may be your only realistic
> option.

Very limited range. Not at all useful when family lives in suburban New Jersey and affected party is in Manhattan. Or familiy is in Riverside and affected party is in downtown LA.

Better to just not worry. "I'll be home when I can. Don't run around like a chicken with your head cut off, trying to call, when such calls do me no good whatsoever."

Yes, it says NOTHING in THESE RULES (nothing in Part 97, the Amateur Radio Rules) "prevents the use by an amateur station of any means of radio communications at its disposal." In other words, it's saying the Amateur Radio rules don't prevent the use of any equipment available during an emergency, which would include equipment designed for frequencies outside the Amateur Radio bands.

Clearly, when the alternative is possible loss of human life or property, the government never intended for its rules to prevent a person from using a radio, any radio, to seek help where needed. As a result, the rules do allow the use of any equipment during an emergency.

By the way, the concept of a person using any equipment during an emergency is not just limited to Amateur Radio operators. Subpart E, Section 2.405 extends this to almost everyone in this country. Section 2.405 includes a reference to the Amateur Radio rules listed in my last message.

> There are other rules and Parts for the other
> frequencies. Just as what may be legal in your
> state may not be legal in another state. You
> have to follow the rules of the state you are
> in and not the rules of your state when out
> of your state.

Amateur Radio is regulated by the federal government, not by the individual states. Since federal law supercedes state regulation, the states have no real say in the matter (other then comment during proposed rule changes or Congressional representation).

To the person posting the original question, after reading the messages posted by others, I guess what we're all trying to say is that you can only expect so much from a handheld scanner. None of them have earth shattering sound. Therefore, switching scanners is not likely going to solve your problem. As most of us have found, the only solution is to add an external speaker to get better sound when you're using the scanner at a fixed location. If you need better sound while toting the scanner around, a good set of earphones is perhaps the best solution.

>

First off,much would depend on your distance to the airport.
I'm assuming the sportcat is a handheld,and you just use the little
stock antenna.
With that setup,you'd need to be within 5 miles to hear the tower -
Possibly 10 depending on geography,obstructions ect.
You would be able to hear airborne aircraft from a much greater
range,for obvious reasons.
If your serious about wanting to hear everything there is to hear,you'll
likely need to upgrade to a base scanner,and mount an antenna as high up
on your house as feasible.
Handheld can be used in the field. You can't just connect it to an
outside antenna,as this would just overload it.
I have a discone mounted on a 15 ft. mast on my 30 ft. house , and can
hear the tower of a military base in my area from a distance of about 50
miles.
That said,I wouldn't advise seeking too much help in the way of finding
frequencies.
Much better to search and find them yourself.
Take the easy way out,where all you have to do is program a list of
freqs you found on some web page,and you'll likely loose interest in the
hobby.
Add to that the fact that no list is comprehensive.
You probably know that the civilian aviation band is 118-140 mhz,AM mode.
Theres also quite alot of other radio traffic emanating from an airport
in different bands,such as security,crash trucks,service personnel ect.

Unless you live in the shadow of the airport,mount a good external
antenna,mate it with a good base scanner ,then seek and ye shall find.

Go to the Uniden web site <http://www.uniden.com/> and
order a wall transformer for a BC 235 XLT. This is the Uniden equivalent model
of the PRO-90 and PRO-91. Or the Unidne 245 XLT power supply will work also.
NiCads recharge in sixteen hours
and NiMH AA cells or the NiMH battery packs for the Uniden 235 XLT, 245 XLT and
250D and PRO-90 recharge in twenty four (24) hours after complete discharge.

Also you could recharge the AA cells out side the PRO-91 radio with a fast 4
AA charger!

The PRO-94 will not receive the CB frequencies. Most of the high end scanners like the PRO 2006, Icom R10, and the Uniden Beartracker models will receive the CB band.

The only scanner I've ever owned which has decent sensitivity on the CB band is the Relm HS200. That scanner has been out of production for several years now, but you might be able to find a used one on eBay or elsewhere on the net.

954. Mobile Base

Newsgroup: rec.radio.scanner
Date: 2003-08-23 00:32:45 UTC
From: Burr <pitzpho@earthlink.net>
Message-ID: <3F46C487.8090902@earthlink.net>
Source record: 26655

My new mobile platform for listening,
I just got a beautiful old 1968 Ford/Thomasville School Bus. It has been parked in the inter-city and has been well marked with the latest graffiti and gang markings over just about ever inch of the 35 feet. All the windows are broken and even the tires are tagged with gang stuff. It has a big gas engine that runs very well with a two speed rear end and air brakes.
I sure hope I don't drive through the wrong gangs areas when I bring it home to the desert next week. Just think how envious all my neighbors are going to be when I have this beautiful green, tagged school bus parked next to my house while I am rebuilding it.
I am going to build a bedroom with hanging lockers and a small dresser in the rear, Next will be the bathroom with a tub and shower, a toilet from a 707 with built in holding tank and a ac/dc/engine-water water heater. The walkway will be on the side so I can have a nice size room with out people walking through while you are taking care of business! The next area will be the kitchen with an old fashion dining area like an old drugstore both. The next area will be the living room area with a wood burning stove with a glass door. The drivers seat will turn around to face the living area as will the passenger seat. A small coffee table with two end tables built with Redwood. I am not going to cover any of the windows so I can enjoy the wonderful view from anyplace in the "bus". I'll have a head with a view!!!. I will build screens for all the windows.
The corner just in front of the kitchen area will be the radio area. I will build slots with locking rails to keep the radios in while I am moving. I'll also have 12v deep cell batteries locked down under the radio center to run the radios
This thing has a platform on top for luggage with rails that will make a nice antenna farm/platform. Just ahead of the platform I'll install three solar cells that will put out about 15 to 20 amps or maybe even more in the bight desert sun. The top will also have two 12v swamp coolers. Under the bus will be mounted four 35 gal. drums for water, a 35 gal. drum holding tank from the bath and kitchen and two extra 35 gal. fuel tanks. I'll also carry two spare tires, a full toolbox and two bottle jacks. The outside paint will be in "desert" earth tones with bushes and desert flowers painted right on. The idea is to have the "Land Yacht" fit right in with the back ground.

OK, this will take the next six months, I have my old Cortez to use for short weekend trips and long road trips. The "Land Yacht" will be used just for trips out into the desert for a week or more and as a guess room here at the house.

Interesting technical & legal point, but the law can be like that.

So, for the fun of it, lets introduce more license categories:

Assume, for a start, a military radio operator, various amateur
license categories, CB licensees, emergency service personnel such as
ambulance, police, fire, etc.

Just who is or isn't allowed to use available transceivers under
various circumstances?

No, not trying to be "difficult" here. For practical purposes, it
might not make any real difference in a real emergency, but it might
be interesting to know how the regulations actually read in various
countries and guidelines by the ITU.

At the extreme of "any means" does this mean that anyone can rig an
untuned spark gap transmitter to "call for help" whether he holds any
sort of license or not?

Yeah, I know, I specialize in difficult questions, and often being
correct.

One of the reasons why some people on misc.survivalism hate me. :-)

^ sort of license or not?

Sure. It would not be wise to regulate how anyone may seek help in a life or death situation. We are permitted to call for help in such situations in anyway that will work. If you are about to possibly die, and if you have built a spark-gap transmitter for use in such a remote event, and if you use it to call for help, and receive help, then you have done a good thing. If in the process of saving a life you caused interference to someone's TV then it is of no consequence. But if you caused interference to someone's pacemaker and that person dies, then your wisdom should probably be challenged in court.

Hi All. I just purchased a BCT7 Uniden scanner. I have several radios and scanners but I wanted this unit because of its size and features....The question I have is this, can the preprogrammed frequencies be deleted, changed or otherwise brought up to date if the frequencies change in the area....? I do not want to modify it to receive cell phones or the like just to change some of the features....like the annoying priority that cannot be turned off etc..anyone have any experience with this scanner?

Ah yes, always possibilitie difficulties, are there not?

So many variables! Firstly, the chance that the transmitter would
possibly interefere with a pacemaker, which is, of course, always a
possibilitiy, depending on whether it is close enough to someone with
a pacemaker to stress the solid state electronics in their device to
the point of failure.

Then would have to consider in what country and state they lived.
Then would have to consider if male or female, Christian or not,
human or pet.

Sigh, so very complicated, isn't it?

How could anyone know the state of sin of even an individual human
soul?

Even if they were in California?

Thanks to all. I tried running audio thru stereo, that works pretty
well, but stereo is in family room and we listen in kitchen. So
next step will probably be a small amp and a speaker in kitchen.
Was hoping for a new hardware solution though as it would solve my
problem of what to get my wife for her birthday. :-)
Thanks again.

I suspect strongly that anyone close enough to have their pacemaker
disturbed by an RF field is also close enough to holler at for help....

I enjoy listening to CB on a RELM HS 200. However
using a CB walkie talkie or mobile CB rig and a real CB antenna will
get two (2) mile reception. The RELM even with a CB antenna
won☐t receive much more. The ICOM IC R-2 , R-5 and Uniden BC 250D will receive
CB also Theses scanners allow tuning out of band ☐free bander☐
CBers. With a CB antenna the scanner receiver☐s range will go
from several hundred feet (on a rubber ducky stock antenna) to ¾ of a mile to
several miles when using a real CB antenna!.

Sorry GeorgeF, I have absolutely no connection to Edna whatsoever. The ONLY identity I have had since getting on the net in 1996 is that of N8KDV, you however can not honestly say that can you?. I do not download kiddie porn nor am I a swinger.

Nice try though George.

Not many people on this group from MI. Both Edna and Steve use an ISP that is
only in parts of MI.

Too much of a coincidence for me to bear.

I'm not George my name is Joe. I have exchanged emails with George about
military frequencies.
Joe

973. ID Tracker Updated - V2.6.2

Newsgroup: rec.radio.scanner
Date: 2003-08-23 17:03:18 UTC
From: "David M. Hitchner" <biteme@spammers.com>
Message-ID: <60N1b.584$2E1.304@fe05.atl2.webusenet.com>
Source record: 26676
Cross-posted to: rec.radio.scanner,alt.radio.scanner

ID Tracker has been updated.

http://bellsouthpwp.net/k/d/kd5eis/IDTracker/IDTracker.htm

Please read the installation notes if you are updating from a previous
version.

http://bellsouthpwp.net/k/d/kd5eis/IDTracker/IDTrackerVersion.htm#InstallNotes

New features/changes for V2.6.2

- Added comments to the identification screen. These
comments will be saved with the ID information and
will be displayed as a tool tip on the main screen when
the ID is active.

- Added user definable data paths. This sets the folder
for storing data files and allows a user to maintain multiple
data sets which can be useful for scanning in different
locations. The default value is a subfolder of the application
folder named "DATA". The dropdown list will save
previously created data paths for quick recall.

- Audio files will now be stored in a subfolder of the data
folder. This is necessary for keeping track of the files
when switching data paths.

- Due to a data file format change, ID descriptions with
commas will not be read properly. To correct the problem
you may enclose the description in the data files in
quotes ("). This change was necessary to allow the
addition of new fields. See "Notes" in the help file for
additional information.

981. Scantenna Mounting issue

Newsgroup: rec.radio.scanner
Date: 2003-08-24 04:50:33 UTC
From: junkmail@altonillinois.com
Message-ID: <70729ae5.0308232050.2901abb5@posting.google.com>
Source record: 26684

I'm getting a Scantenna, and I will be using it for both Railroad and police all between 155Mhz and 162Mhz in my area.

The train tracks run basically north and south, as most of the police radio traffic will be to the south of me.

so, my question is, has anybody tested the scantenna to see if it does better facing the incoming signal or at a right angle to it?

I guess what I want to know is when I mount it on the mast, should the "V" arms be pointing North and South, or East or West, or does it matter?

thanks.

I believe that was answered in a follow-up message - just about anybody if the situation involves the potential lose of life or property. Note this is very specific. A flat tire, broken finger, or whatever minor incident, isn't enough. It must involve the extraordinary circumstance of potential lose of life or property. The rules are very specific about that, repeated several times in those rules.

The Scantenna is marketed as an omni-directional antenna, so it shouldn't
matter how the arms are placed.

Hi Guys: This is not a promotion or endorsement for this video, but I just wanted to say that I just purchased this DVD called WTC 9-11-01 Day of Disaster and saw footage that I never seen before shown. This video was shot by Steve Spak who was an Auxilliary Police Officer out of the 63 Pct many years ago. He has had numerous front page photos in the NY Post and Daily News. There is a scene showing a PD Sgt covered in soot asking for help from volunteers and directing them to raid the Fire & Emergency trucks for equipment and first aid items. This gave me the chills... Anyway I just thought if anyone was interested you could check out his web page www.stevespak.com Regards & Be Safe. Marty

Oh oh, I think you may have given GeorgeF an idea for another item he can sell on eBay.
Clues! They would probably sell better than
alien/UFO and doggy drivers licenses. In the process of doing that, GeorgeF would have
access to a lot of clues, he sure seems to
need them. He could also pass them out to his pal pilotjoeturner and Billy8156, they seem
to be in need too.

ScanTenna is OMNI directional it don't matter what direction you mount it. My ScanTenna works Great full 360.

I was parked on the bluff above the Port Washington, WI harbor on Lake Michigan, and heard two stations communicating in what sounded like a digitized or scrambled mode. I could hear the inflections in their voices but not understand them.

I don't recall what channel it was. No problems hearing the USCG or other small fishing boats.

Even though the Scantenna is advertised as omnidirectional I did my own experiments with it and agree with the other posters that there is no difference in signal strength regardless of orientation...just get it as high as posible for best results.

Yes, digital is on VHF marine. What you may have heard is Digital Selective Calling (DSC), an automated beacon, or some other similar digital transmission. Don't worry, since there is little advantage in it at the moment, digital won't take over marine radio anytime soon.

Scantenna owners:

Any tips on grounding/lightning protection? I understand the new
Scantennas come with RG6 and spare "F" connectors, someone suggested
getting a Radio Shack CATV grounding block and using the F connectors.
The existing pipe at the top of the pole is grounded with a heavy guage
copper wire running down to a 6 ft grounding rod buried in the ground,
it used to have a TV antenna.

My antenna arrived today (haven't even opened the box yet!), will have a
friend install it 35 feet up a pole..... I hope to do this correctly
the first time, so I don't have to ask him to climb the pole again :)

Try this site for information - reviews of radio gear

<http://www.strongsignals.net/index.cgi>

Radio Shack's site has on line manuals for most of
there radios. It helps to down load a manual to read over BEFORE
plopping down several hundred dollars for
electronic gear, to see if your happy with the piece of equipment and
if it will meat your needs.
You may want to install a CB transceiver/antenna in your vehicle. CB's
give better range and a dedicated transceiver will
allow you to copy all the important stuff on the truckers channel CH 19
while you listen to a separate radio scanner. Or just us the PRIORITY feature on
the scanner, by entering CB Ch 19, 27.185 Mhz AM mobe,

Jim

Well, I think you're going to kill off about half of the US if you do that. Stores selling supplies, bottled water, duct tape and plastic at astronomical prices. US flag stickers that all suddenly appeared on everyone's car after 9/11. t-shirts, etc. All the anti bin-laden crap (like bin laden shooting targets) on ebay. Hiked up gas prices in some areas. 24 hour media coverage, and people looking for prime advertising spots on those broadcasts for their commercials. Books (memorial books, picture books, and the generic flood of "what your government doesn't want you to know" books), Videos (I saw a few "remember the firefighters" videos last week at the mall). All the prime time TV specials afterwards.. I'm sure magazines and newspapers featuring pictures of the towers all sold like hot cakes too. I'm sure I could go on..

SKYWARN is not used for commercial purposes -- SKYWARN storm spotters reporting severe weather to an agency who subsequently issues a storm warning to a television station is no where near commercial purposes. SKYWARN spotters report to an emergency management agency or the National Weather service. For more information, see:

http://www.skywarn.org/

Keep as far away from any metallic objects as possible, ie; vent pipes,
roof vents, attic fans, electrical wiring, other antenna lead-in wires.
Keep your antenna cable length to a minimum.

I seem to recall audio inversion scrambling allowed on some VHF marine channels. However, it also could have been a police agency using it also. I know, not exactly the usage originally intended by the FCC, but trust me, it has happened before on VHF marine. Although, with so many Nextels, etc., I am more likely to think a commercial marine operation using simple scrambling. If you do a Google search or something similar and put in VHF marine scrambling, you will see several manufacturers that offer scrambling either standard or as an option. (You don't want other fisherman to know where you caugh that sunfish at!)

You didn't say which model Radio Shack you have?

If the scanner is designed for reception of the 900MHz band, then generally, you should be able to receive cordless phones in the 900MHz band. However, many of the newer phones use spread spectrum technology, or digital, which will prevent you from hearing them.

Be advised, monitoring cordless telephones is now illegal in the U.S.

Hi all,

I'm new to this NG. But I wanted to ask if anyone could send me a copy of the manual for this scanner that I just acquired.

I also have just acquired the Rat Shack Pro 2009 and the Pro- 42. I have owned for years the Pro-31, and have used the Bearcat 210 many, many years ago.

Are there any popular hacks/ tricks these scanners can do, web sites to visit? FAQ pages?

If anyone needs a copy of the full 40+ page service manual (cat no: 20-132) for the Pro-31. Just ask.

Bob,

You could get by with a Radio Shack discone, or a short vertical. I once had a 46 in whip in an attic that was 6 foot at peak. If you own the home and are prohibited from placing antenna outside you might try searching for "stealth", "disguise" scanner antenna. I remember seeang ad for a vent pipe antenna. I looked like the normal type of vent pipe on the roof; only difference was that the antenna was inserted from under-neath in the attic. You would need to cut a 2 in hole in the roof and do the pitch etc. to prevent water from coming in.

good luck,
Mike

Hi,

Has anybody used these two items to improve and/or split their
signals?

Both are claim to be for signals between 50 to 900 Mhz.

The first is a signal pre-amp that claims a 25db gain. It has an FM
trap too for $32.95.
http://www.rca.com/product/viewdetail/0,2588,PI45519-CI205,00.html?

This is a 4 way splitter with a 10db gain pre-amp. For $22.95

http://www.rca.com/product/viewdetail/0,2588,PI45550-CI205,00.html?

Just wondering how it would work for a Scanner?

Thanks.

I love experimenting with such things... one of the most appealing aspects of the radio hobby.
The 25dB signal amp may work, and work well, but with a few caveats.
One, if you already have a decent, passive antenna which covers the range you want to receive, and is mounted high enough to do it's job properly, you may not find enough improvement from the 25dB unit to justify the cost.
Two, if you currently have any interference problems from nearby FM stations, cellphone relays, pagers, etc., then the amp will only make those problems worse. Not only would you be amplifying the noise already flying around your station, but you'd be introducing one more element into the feedline to receive MORE interference if it's not shielded well. It could make the problem much worse.
BUT, that being said, you may see real improvement in fringe reception, areas you sometimes get but never loud or totally in the clear. The amp won't magically make them clean, but you will be able to copy them more consistently.
You also want to be sure to mount the amp AT THE ANTENNA, not at the station or anywhere else along the feedline. You want to amplify the signal as purely as possible BEFORE it gets into the feedline, not at the end where you'd be amplifying line noise as well. And that 25dB amp needs power to amplify, so you will need to have an outlet or some way of getting power to it at the antenna. Just another factor to consider before spending money.
As for the 10dB 4-way splitter, you may be better off using a passive or non-amplified unit. Not a definite, just a suggestion. Yes, when you split a single feedline signal to two or more radios, you will have loss from the split, and a little amplification is desirable to make up for it. But again, noting whatever your interference conditions may be, a 10 dB amplification at the station may exacerbate the problem.
But for all I know, you may not have any interference problems to mention, so why not try it all out?
The main thing is that you want to experiment with it, and therefore should do so, especially if you can afford to buy them and live with whatever gains and/or shortcomings you discover.
On a related but wholly unimportant note, I notice that the descriptions given for both units mention that they 'amplify signal loss'... I know what they mean of course, but it's poorly worded! :-) I mean, I'd think one would want to DECREASE signal loss, rather than augment it!
Good luck, have fun trying, that's the whole point of antenna experimentation.
Linus

Forgot to mention in my previous post, if the 25dB unit does have a decent working FM trap, it may be even more appealing to experiment with, since that could ease interference if you currently experience it on your current system.
Best of luck-
Linus

http://209.145.176.7/~090/awh/bearcatting.html lists the BC100XLT as operationally equivalent to the BC200XLT and has a link to that manual. Uniden also has a BC200XLT manual at http://www.uniden.com/productsupport.cfm?product=BC200XLT. There is a UBC100XLT manual at http://www.uniden.com.au/PDF/UBC100XLT.PDF. This is the Australian version which should be similar to yours except the low band is 66-88 MHz.

Try www.mods.dk for tips, modifications, etc.

My local county uses a GE Ericson trunked system with Logical Trunking Order (LTR). Needless to say I can't track this with any scanner I know of on the market.

Does anyone know of a radio I can use to receive this system. Something that can be programed to receive only. Nothing new, looking for older model I can grab from Ebay.

Thanks

Its Rensselaer County in New York. I'm told it's a Multi-Net system.
No way to trunk track. Real pain in the but. My scanner will do
everything else.

I just got this from an email "EFJ Transcrypt MultiNet". Does that make
any sense.

so I was a little off when I first asked.

Thanks for any help.

Jim

Jim,
Too bad, as Tarzan would say, "LTR good, Multi-Net bad" lol.
Kind of figured if it was public safety it would not be LTR regular, it's
not public safety grade.

1073. Antenna Question: Handheld's vs External Discone or Scantenna ?

Newsgroup: rec.radio.scanner
Date: 2003-08-29 11:59:31 UTC
From: Robert11 <rgsrose@tiac.net>
Message-ID: <DeH3b.74$EW1.49@newsread1.news.atl.earthlink.net>
Source record: 26576

Hello:

Question regarding handheld scanner aerial (the rubber-ducky kind that comes
with unit):

Assuming that I have all of the following 3 aerials at the same height,
would there
typically be "much" of a difference between what the handheld would hear
with it's own aerial, compared to, e.g.,
an external R/S Discone or Scantenna aerial connected to the scanner ?

[again, all 3 at same location and height]

Thanks,
B.

There will be a big differance in most any antenna that is broad banded over
the one on the handheld.
On one of my ham handytalkies I could not hear the weather stations with the
antanna that came with it. Ran some test on the receiver with a service
monitor and the sensitivity was about the same on all frequencies. Put
another antenna on the HT and it would receive just fine then. After
running a few quick and dirty tests by hooking a service monitor up to a
whip antenna and going across about 15 feet to the other side of a room. I
set up a HT and put on one antenna afer another and would adjust the output
of the service monitor tuil the squelch broke. Out of about 4 antennas
(rubber duck type) I tried I found some were as much as 10 times as
sensitive on some frequencies as others were .
In other words each one seemed to be more sensitive on a differant frequency
.

Well it's not very imprtant how well it works IF your scanner(s) already deals with FM stations well. How much noise/intermod/interference do you tend to deal with an on average basis? If not a lot, then give it a try.
Linus

1077. FS: ICOM IC-R7100 Scanner Wideband Radio

This ICOM SP-20 speaker is in mint condition, perfect working order, with virtually no scratches or cosmetic blemishes.

The ICOM SP-20 is designed for use with a wide variety of communication equipment. It is equipped with four separate audio network filters for maximum control of the audio characteristics of received signals. It also features two audio input jacks (3.5 mm mini jack). Input A or B may be selected from a switch on the front of the speaker. There is also a Speaker On/Off switch and a 1/4 inch headphone jack on the front panel.

Ebay auction 3043932162, see http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3043932162.

1079. FS: ICOM CT-17 CI-V Serial Interface - Level Converter

Well, I don't know. Looks good, It'd be nice to be pre-programmed for
Ontario OPP but doesn't look that'll happen antime soon.

Can't see this being too good though, sure, the preprogramming looks ok, but
it won't cover anything else.

Does this radio do normal trunking modes other than pre-programmed? Other
than that though it looks ok.

What's the price tag on this?

What's wrong, Pappy? Mozilla 4.61 (or is that Netscape?) doesn't automatically set up web addresses as links for ya? Bummer. Maybe you should get a different news reader, or perhaps if you updated your current one, it would take care of that for you...

$30 or $40 used! I bought one from WalMart (new) for $24.95 as a closeout item.
If someone had a used one, with all parts including cables, mount, and antenna and it wasn't scratched up, I might give $10 for it.

Sell it on eBay and get $250.00 to $280.00 for it but don't take anything
less then $250.00 if you have the programing cable and software for it.

ID Tracker could not find our BC780XLT and gave us an error when we used
our BC785D. It keeped say hit F12 and when we did that it would tell it
could not find a radio. After 20min of screwing with it we uninstall it and
deleted it.

The Scantenna is omni-directional, i.e. it does not care how you have it facing. http://users.cis.net/kingpop/Scanner/Scantenna.htm

"Heavy" indicates that it is a large aircraft, and alerts others that it may create wake turbulence. Don't know about the "slick-sided".

Just a guess on slick-sided, perhaps it refers to the landing gear being up?

Yes, as most of the stuff you want to listen to are vertically polarized transmissions. If you mount it horizontally you will compromise the reception to a great degree.

1107. Battery Pack Amp Hours

Newsgroup: rec.radio.scanner
Date: 2003-08-30 23:08:18 UTC
From: Matthew and Wendy Plante <mapwam@frontiernet.net>
Message-ID: <C7a4b.1380$hl3.976@news01.roc.ny>
Source record: 26510

I am trying to build, or at least cobble together, a battery pack for a receiver. I will only need one (1) amp of power. The battery will have a one (1) amp fuse on both the lead in and out of the radio just for safety. What I have not been able to understand is what amp hours are. I need a twelve (12) volt battery that will last a while, or at least five hours, and be rechargeable. I have been looking at UPS battery pack, or even small car batteries. Any help? Thanks.

Matthew

1108. Re: Battery Pack Amp Hours

Newsgroup: rec.radio.scanner
Date: 2003-08-31 00:04:11 UTC
From: Bill Crocker <wcrocker@comcast.net>
Message-ID: <SsqcnbM534fppsyiXTWJhg@comcast.com>
Source record: 26511

That is what amp hours is. A 12v battery rated at 5 amp hours, is capable of supplying 12 volts, and 5 amps, for 1 hour. The same battery can supply 12v and 1 amp for 5 hours, or 12v and 3 amps for 1.66 hours, etc. You could even use a motorcycle, or car battery if you want. As long as it's still 12v. The greater the amp hours, the longer it will power your radio equipment, between charges. Make sure the battery is the proper voltage for your radio!

A note of safety...if you're using a lead-acid battery, such as a motorcycle, or car battery, make sure it is the sealed type. Otherwise you will need to provided good ventilation due to the fumes generated while charging. They can be explosive!

1109. Re: Antenna Question: Handheld's vs External Discone or Scantenna ?

Newsgroup: rec.radio.scanner
Date: 2003-08-31 00:27:11 UTC
From: DougSlug <dougslug@optonline.net>
Message-ID: <zhb4b.37789$yg.16349186@news4.srv.hcvlny.cv.net>
Source record: 26512

It would depend on the frequencies you are monitoring. Duckies tend to be optimized for certain ranges (often leaving dead spots or nulls in other ranges) whereas the Discone or Scantenna are wideband designs. At UHF, the loss in the coax feed line from the external antenna could tend to reduce the signal available at the receiver as compared to the directly-mounted ducky (depending on coax quality and length of course). Another thing to consider is that an external antenna with some height could overload the receiver, making it seem like it does not work as well. Adding an attenuator helps this problem.

So as you can see, there are more variables than just antenna type and height. Frequency, type, length and impedance match of the antenna feed line and receiver quality are among the others that need to be considered before you could draw a proper conclusion.

All that aside, I think a discone or Scantenna would probably be better in a "typical" case.

Walt Bertram <3F514A88.A4B9B937@optonline.net>...

^ Are there any URLs that start with www.___ that aren't HTTP?

I'm sure there are. There are many cases where a single server will have both
the ftp and www names. For example, on a network I used for a while:

www.web-o.net = 207.149.11.1
ftp.web-o.net = 207.149.11.1

And both of these were valid:

http://ftp.web-o.net/
ftp://www.web-o.net/

Currently though they have one of those names on the backup server so the IPs
are different.

There are also many cases where something like this would work:

gopher://ftp.web-o.net
telnet://www.web-o.net

And any number of other combinations.

Frank

1115. Re: Battery Pack Amp Hours

Newsgroup: rec.radio.scanner
Date: 2003-08-31 03:30:43 UTC
From: "Its different"@again.com
Message-ID: <vl2qllnmibfie9@corp.supernews.com>
Source record: 26518

P.S., Amp hours and Milliamp Hours are similar in the following fashion. There are 1000 milliamps in 1 amp. Even some AA batteries now have 1200 Milliamp hours. This would be 1.2 Amps for for 1 hour.

I stumbled across the following while researching comments for this posting. Visit it, it may help. But look below the quoted text for an easier solution.

http://www.powerstream.com/BPD.htm

"Cell capacity is rated in amp-hours or milliamp hours. The symbol for capacity is C. This is amps times hours. Divide by hours and you get amps, divide by amps and you get hours. For example a 5 amp hour battery is the same as a 5000 milliamp-hour battery. If you want to discharge in 10 hours, you can get a current of 5/10 = 0.5 amps. If you need 100 milliamps current, then you can run for 5000/100 = 50 hours.

Often a discharge or charge rate is given proportional to C. So a discharge rate of C/5 means C/(5 hours), or the constant current to fully discharge the battery in 5 hours.

The calculation of run time versus current is a rough estimate, but is accurate under the right conditions. The faster you discharge, the lower the capacity of a battery. This trade-off depends on the battery chemistry and construction. Usually the capacity of a battery is quoted at a C/20 discharge rate. So an 12 amp hour battery sealed lead acid battery will actually put out a steady 0.6 amps for 20 hours. However, if you discharge the same battery at 12 amps, you would expect to run an hour, but you will only last for 22 minutes. Also, if you wan to run at 10 milliamp you will get less than the expected 1200 days, since self-discharge of the battery will limit your run time.

Different battery chemistries differ in this respect. Lead acid batteries are probably the worst at the rapid discharge end of the scale. NiCads and NiMH are much better."

Or the easiest way is to get a pre-fabricated 12V pack with charger. There must literally be tons of them available. They usually look like small blocks with a cigarette lighter jack.

Here's one that I found. http://www.batterybusters.com/PowerPac12.htm

Or here!

http://www.kooleraire.com/12%20Volt%20Power%20Pack.htm

Hell, for that matter, a 12Volt pack with recharger for a modern hand drill should work.

http://www.contractorstools.com/dewaltbatteries.html
http://sale-depot.net/tools-hardware/item/B00004Y2MK/

But looking at the hand Drill specs, I don't think that the amp hours (2) are great enough. Refer to the links for the Power Packs.

Regards.

I have the Uniden without the Digital Card. (APCO). Unless your area is APCO compliant, there would be no sense in buying the Uniden any way.

Do you know if your area is APCO compliant?

Uniden is expected to release another generation of Digital Scanners that will be compliant with a broader range of digital systems. You may be better waiting anyway. The prices will come down as the units become more popular, and the bugs will be ironed out as well.

Regards. (sorry to see your plight, I'm sure that it will get us all sooner or later)

>
> I keep wondering and today I ask!!!
>

You add the world "Heavy" to your call sign if the aircraft is capable of having a Max Takeoff Weight of 255,000 lbs or greater. Even if your actual takeoff weight is less than 255,000 lbs as long as the aircraft is capable then you must use Heavy. Example: "Miami Center American 498 Heavy with you level Flight Level 330"

This is so that ATC and any aircraft who hears the callsign realizes this is a heavy aircraft. The reason this is important is to because the heavier an aircraft is the more 'wake turbulance' it will generate.

Now the term slick-sided is new to me. Never heard this in 16 years of having my pilots license.... Can you recall in what context it was used? Part of a Callsign? The sentence it was used in might give me a clue...

Could "slick sided" actually be "slick sighted"? Could be they're
reporting an oil spill in the water. Or, if you're misunderstanding the
word "slick", they may be reporting visual sighting of something else.

Although I laud the availability of Digital Trunk Tracking radios, they (those responsible for decisions at the Public Service Level) have relegated Scanning Radios to the level of computers, where one will no doubt have to buy a new unit every several years to keep up with the changing formats. (if we are luck enough for the government to deign that we can listen, and if they don't encrypt all transmissions, and if they don't criminalize the mere ownership of scanning radios. I can see it now, the scanning radio task force, where your neighbor will get 1 year of free cable if they turn you in for having an illegal radio, hell, people will be turning you in for suspicious clothes lines, lest they actually be concealed antennas).

And the fun is just beginning, digital AM/FM, digital shortwave, etc. These heathens have assured that any of us that collect radios will have totally useless units, useful for museum pieces only.

One of the proponents of digital AM/FM radio systems said that the transition from analog to digital will generate the sale of an additional 2.x billion radios. It's nice to see that U.S. authorities are so concerned about the Chinese economy, because they sure won't be made here.

Hello Burr,

I've been monitoring both civil and military air comms since the late 1950's. I don't ever recall hearing the term "slick sided." If you hear it again I'd appreciate your posting the context in which it was used.You may have misunderstood the words, although I can't think of anything commonly used that sounds like the phrase. I would agree with the poster that said it might have been "slick sighted," perhaps in reference to an oil or fuel spill. If you're in the Massachusetts area there was a recent offshore aircraft accident and the transmision may have been in reference to a search-and-rescue mision. There's also a slim possibility you've intercepted a transmission from an experimental or "black ops" military aircraft and you did, indeed, hear the phrase "slick sided." If that's the case, it's anyone's guess what it means.
This is a hobby in which we're constantly learning. There's always something new. Hope you enjoy listening to the air bands as much as I have over the years.

Morning Dwight,
Live in the desert in the middle of "all" the flight research center
for everything from aircraft to radar.
I live next to China Lake, 50 miles from Edward's and 100 miles from
Nellis (area 51) also Fort Edwin 25 miles.

We see and hear a lot of "funny" things out here at night and during
the days at times.

No telling what I picked up but I'll keep an eat tuned for those key
words and see if I can remember them.

Why would you want to know these? They have no voice.

I ask only because, it's all too easy to sabotage or "shoot'em down" by transmitting. The freqs are public and should be easy to find, but maybe your request should be asked of www.modelaircraft.org

Modelers have many thousands of dollars invested into some of these planes. Caution is needed.

I would be happy to answer questions about the hobby in private email.

My addy is not altered. Just reply.

How's Betty?

Anyway, it actually looks Retro if you can ignore the pushbuttons. Not exactly what we're accustomed to, but, as with mold, it may grow on you.

Its ease of use remains to be seen. I just bought the Uniden 785D (about 6 months ago) and it's a learning curve. I'm convinced that they failed to correctly execute the Weather Alert Features, and have written exhaustively to Uniden about this. They steadfastly believe themselves to be correct. I believe that someone is going to get hurt if they rely on the Weather Alert feature. I have gone so far as to contact the Consumer Product Safety Commission, and am actually awaiting a response from Uniden before pursuing it further.

So many of the newer technologies have been inadequately thought out, daytime driving lights on vehicles for one. So many people now drive at night without turning on the headlights because A: The lights are sufficient for them to see forwards. B: Many cars have digital dashboards, and the information is there without additional lighting from the dashlights of old. As a result, an increasing amount of cars can be seen driving through the city without any taillights. (They never turned on the headlights). Oooops.

You'd think that someone would discover this, but noooo. Modern engineers rely too much on computers and too little in common sense. Take a drive through a modern parking lot. The engineers drew the plans for it from a directly overhead perspective, see how easy the traffic flows. But to us suckers at ground level, some of the parking lots seem almost impossible to navigate.

Save us from the modern engineer.

Regards.

Well you have to understand there are 28 of us in the HAM / Scanner club and when a program wont run on the 6 computer in the clubs building and the members computers at there homes, then it's not a computer or radio problem, i.e. it's junk software. We first install this on a new 2.66GHz Pentium 4 computer that runs TrunkStar780, ARC780, SanPro780, Java780 and CC780 just fine. ID Tracker would not find the scanner and keeped telling us to hit F-12. I installed it on my Toshiba Tecra 9100 Notebook, Pentium-4 2GHz and tried that with both the 780 and the 785, same thing, i.e. hit F-12, there it said it could not connect to the radio. So we fireup TrunkStar780 and theirs the radio working just fine.. We do a setup about 30 times with ID Tracker before someone said "screw this not working free junk lets go get dinner" so we uninstalled it from all the computers deleted the junk from the hard drives and went to AppleBee's. "the end"

Well Burr back in the day slick meant one of two things, i.e. non-military and or no guns. Sometimes I flew a slick OV-10 sometimes it was "BEAR", i.e. as in loaded for, 2 37mm canons, 2.75" rocket puds and mavericks under both wings. out there where you live you should be getting 29 Palms and March Air Force base, George Air Force base, MCAS Miramar and Miramar Naval Air Station. You have gun and bomb ranges all around you, so if I had to guess i'd say your hearing a guy without a guns.

Hi That Other George,
Thanks for the note, I'll bet your right. Sounds like you few in Nam? I rode in Nam, civilian doing things. I remember the dust off's were slicks. I rode a lot in Hues with guys riding the rails, or the Hughes fire fly. Brings back memories!

Hope your sitting down for the news I'm about to tell you!!!

George AFB is a civilian parking lot for unused airliners, March only has a air reserve wing!!! and, MCAR Miramar is closed but they are talking about basing a chopper wing there!!!

That would be a "white tail", jet was constructed before McBoeing knew who
was going to buy it. Very rare occurance, but possible if the customer is
a leasing agency.

McBoeing applies airline colors to each jet prior to the first test flight.

Hey, just wondering if anyone had this scanner i just ordered it off of the net and i think it is really good just wondering ur opinion, and was wondering if there was n e thing cool that n e one no's about it that i could try, and/or modifications

this is a great scanner if your looking.

1156. Newbie question: icom ic-r7000

Newsgroup: rec.radio.scanner
Date: 2003-09-01 16:25:54 UTC
From: "George M. Buzzell" <vze2vtqx@verizon.net>
Message-ID: <mqK4b.16106$NC2.15427@nwrdny01.gnilink.net>
Source record: 26459

I recently came into possession of a radio receiver I purchased for my father (who passed away- that is why I now have it), an ICOM IC-R7000. The problem is that when connected to a low gain omnidirectional discone antenna which I
purchased recently, it does not even have reception as good as my FM home stereo in the FM band and it doesn't seem to have very good reception at any other frequency.

Here's the question: do I need some kind of amplifier to make this set work even to the performance capabilities of my home stereo system? If so, does anyone have any recommendations on what kind of a preamp I should use. Do I need a specialized antenna for the various bands? Is there anything else I can try to boost performance?

I have to admit that I know just about nothing about scanning, but think I would like to learn.

Thanks in advance.

Check for a button called Attn (attenuator), make sure it is OFF. If it's on, it suppresses the signal. What type of antenna cable did you use, and how long is it?

Bill Crocker

Hello George,

I am sorry to hear about your father. If he enjoyed the R7000 he must
have been an interesting fellow.

It is unlikely you need an amplifier. Very unlikely. I live deep in a
rural area and hear anything I want to hear with a simple outdoor
antenna.

Check and make sure the ATTENUATOR switches are *not* pushed on your
receiver. I don't recall how they're labeled on the R7000, but they
should not be activated. Tune to something like a local weather
station (162 point something) or any station you can hear, and play
with any ATT adjustments. You may find significant improvement.

Amplifiers, especially consumer/hobby amps, generally add more
problems than they solve. Money is best spent in antennas and decent
feedline and connectors.

If you are in a busy high population area, you may be receiving off
frequency signals (remember any antenna hears any frequency, although
at different degrees of efficiency), and those strong signals may be
overloading your receiver. You don't know if those other signals are
there because they're on a different frequency than the one(s) you're
trying to monitor.

If you live near a tall building with a potent paging transmitter on
the roof, and there are tens of thousands nationwide, that could kill
your receiver over the entire band, whatever it is. If this is the
case, switching in the attenuator might help. It's quick and free to
experiment.

The R7000 is a pretty decent receiver. If it's working properly, it doesn't need a preamp.

If it's not working properly, adding a preamp is a needless expense. Have the receiver serviced.

It's probably working.

There are some articles in the White Papers section of our website discussing antennas and reception. Read some examples of where smaller antennas resulted in better performance.

You have a nice receiver, nicer than many will ever own.

Theres nothing real great about it if you compare it to other scanners.
About the only thing it has going for it is the alfa tags. With only 100
channels you wont get too far. Its just a basic radio without very many
features.

Depends on the context it is used. If the frequency listing is referring to a repeater operating frequency, you would want to program in TX. If the context is referring to the mobile station, you would want the RX frequency.

There are some systems that use a base station on one frequency and the mobiles on another, so the mobiles can only talk to the base. In that case, to pick up both sides of the conversation, you would need both frequencies (plus be in range of the mobiles).

This is in excellent condition-
Except it will not run off of charger.
It runs fine off of batteries.
The fault is in the radio. If are technical you could probably fix it. I
never tried.

Please post to the newsgroup if you are interested, or I may put ut on eBay.

Thanks.

I could also add the Optolynx and cable.

I have two of them. It's my favorite handheld. When/if you get tired
of the BP-180 battery pack, you can easily change to a NiMH battery
pack. Neatest trick: it has a stereo headphone jack, so you can use
Walkman-type headphones with.

Most people pay a little more for the Sportcat 200. In my case, the
store sold only the 180, so that's what I got.

Frank, the point you make is valid; however, what you have missed is that the DEFALUT for anything that starts with www is http. Of course it could be something else, but only then should you put it in. This is called common usage (also common sense).

I am thinking that they mean the RX frequency is the the frequency that the repeater listens to that is being transmitted by the mobiles or handhelds. The TX would be the frequency that the repeater transmits on. In the case below, it doesn't make a difference as that must be a simplex frequency, which means the radios transmit directly to each other without the intervention of a repeater.

If the publication is different than what my thinking is, let me know. If you have a listing where the TX is different than the RX frequency, I would use the TX frequency. On a different note, some systems do utilize an input as a talkaround frequency of sorts..... Sometimes it is worth programming that one in as well.

Any other questions, feel free to email.

Assuming it has a wideband FM setting (sorry not familiar with the specific radio), try FM Wide rather than just FM.
Bear in mind that the audio will likely be mono and not stereo as well, so will not sound as good as a proper stereo radio.

Hi,

Question concerning modes:

Have several listed frequencies between 30.0 and 40.0 MHz for town fire and police.

Can't seem to receive them (well).

Would these likely be fm ? (thought they were pretty low freq's for fm, but new at this, and don't really know)

Bob

Generally speaking they will be FM. I'm sure there may be some instances where they may not be, but FM would be the general rule.

Anyone yet have an idea what the secret feature is noted in the below
link?

http://www.strongsignals.net/access/news/news.cgi?
type=single&section=radio&entry=1153

i thought the display looked very cramped as compared to my 250D, and no,
I am not a rat shack hater. I have a 2004 and pro-43 which I love, so
they have been the recipient of some of my funds over the years.

http://www.strongsignals.net/access/image/radios/pro-96_e.jpg

just trying to see if this radio has any advantages (other than the
9600baud) that would appeal to me.

It's called a 'slick' because it does not carry armament for attack
purposes. Usually just a machine gun manned by the crew chief is the only
weapon carried.

Get a mono to stereo headphone adapter and a set of amplified computer
speakers. That should work reasonably well.

I use the Radio Shack amplified speaker with my handheld in the car.
They are really quite good.If you have a 12vdc power supply it will
work fine in the house too.

I am running my scanner audio thru my computer and it works fine..
except.. I noticed I have a faint hum on the audio. I can click the
audio off and on and the hum goes away. I do use the RS stereo to mono
adaptor.. which did help and allows the audio into both right and left
but.. it did not take the hum out..

A friend suggetsed a .1 cap across the legs of the audio.. anyone have
ohter suggestions or do you think this will work?
Thanks

Can't decide whether to get a BC 245 or some Rad Shack
model.
I do like the idea of alpha tags and easy to use software to
enter all of the info and download it to the scanner.
What a the major pros and cons??

What use is a video taken two months after the event? The attack took place on
11/9/01.

Source record: 26421

The MilAirComms.com Log report for 9/3/2003
All times are Eastern Time, frequencies in MHz and
unless other wise noted modulation type is AM.

unid
Time: 0912 "vehicle is leaving at this time". Sounds like a JSTARs
mission
Frequency: 141.8500 (JSTARS)

unid
Time: 0913 ACM over the Gulf? Excellent signal (see antenna note 1)
Frequency: 388.3500 (W470 Common)

TANKER 39; ??SHARK??
Time: 0934
Frequency: 265.4000 (NORAD); 264.8000 (Cape Control)

ROBIN
Time: 0934
Frequency: 319.0000 (Miami Cntr-Vero Beach)

unid
Time: 0935
Frequency: 228.4000 (Townsend Rng R-3007)

CESAR 21 (flt of 2)
Time: 0938 starting decent to FL240 when checking in on 348.7
Frequency: 360.7000 (JAX Cntr-Lowell); 319.0000 (Miami Cntr-Vero
Beach); 348.7000 (Miami Cntr - Melbourne); 343.7000 (Miami Cntr - Melbourne)

CESAR 21 (flt of 2); TANKER 39
Time: 0942 ready for refuel
Frequency: 265.4000 (NORAD)

RESCUE 2120
Time: 0950 On Scene, no EPRB signal, waiting instructions for D8
Frequency: 8.983 USB (US Coast Guard)

unid
Time: 0954 mention of SCREWTOP. Weak sig, antenna point west for
the Gulf instead of north.
Frequency: 349.8000 (FACSFACJAX)

OMAHA 6CS
Time: 1005 missed id, two aircraft a/a talking about an operation
to go down at about 1400 Local. Sounds like they're waiting for a drug
deal in the area of Andros (Bahamas). Have 55K & PANTHERS on standby

for when operation goes down.
Frequency: 282.4250 (US Customs)

OMAHA 6CS
Time: 1013 wkg HAMMER. Wants to know when 55K will be departing
MIA to the location of the PANTHERS. Second question "mother may I go
below the 24th". Asking for permission to go below 24 degs Lat. That
will put him on the south side of Andros Island (Bahamas).
Frequency: 282.4250 (US Customs)

TANKER 39
Time: 1013 wkg St. Pete FSS for radio check at request of Miami Center
Frequency: 243.0000 (Emergency)

OMAHA 16Q
Time: 1020 wkg HAMMER, just off JACKPOT
Frequency: 282.4250 (US Customs)

unid
Time: 1026 ALE traffic
Frequency: 7.527 USB (US Customs)

unid
Time: 1033 "set up for the break"
Frequency: 399.8000 (Tyndall SOF)

unid
Time: 1048 only ID for this freq I have is Tyndall Command Post
however it sounded like ACM activity
Frequency: 361.4000 (Tyndall CP)

unid
Time: 1057 ACM
Frequency: 314.0500 (Tyndall a/a);

ROMAN 12
Time: 1059
Frequency: 323.1000 (Miami Cntr-Key West)

SEAHAWK 11
Time: 1100 WX for NAS JAX and St. Aug. for the next hour
Frequency: 344.6000 (METRO)

unid
Time: 1100 female voice flying around cape area.
Frequency: 126.6500 (KSC WX aircraft)

VIDAR 5
Time: 1107 cleared into R2907
Frequency: 357.0000 (Pinecastle Rng Ctrl); 380.8000 (Pinecastle)

NAVY 128
Time: 1111
Frequency: 364.2000 (NORAD - JSTARS)

SEAHAWK 11
Time: 1112
Frequency: 351.8000 (JAX App)

6U; K8
Time: 1117
Frequency: 285.0000 (TSCC)

unid
Time: 1122 wanting to work Avon Park, I thought he said he was a
B-1, but I could be wrong.
Frequency: 292.2000 (AvonPark Rng Ctrl)

DARK 11
Time: 1125
Frequency: 269.2500; 349.0000 (Miami Cntr-AvonPark); 275.0000
(NORAD); 285.7250 (AvonPark)

KING 15
Time: 1127
Frequency: 292.2000 (AvonPark Rng Ctrl)

VIDAR 5
Time: 1136 DAB on the emergency freq tells VIDAR 5 to contact him
on 387.0000. However DAB isn't answering VIDAR 5 on that freq.
Frequency: 243.0000 (Emergency); 387.0000 (DAB App)

VIDAR 5
Time: 1137 going to 5X, gives up on DAB. (This isn't the first
time DAB has problems with their UHF, seems like a common problem)
Frequency: 267.5000 (FACSFACJAX)

RED TALON
Time: 1338 calling FIDDLE in the red.; previous xmissions were
encrypted
Frequency: 285.0000 (TSCC)

unid
Time: 1402 "Testing, Testing"
Frequency: 5.732 USB (US Customs)

unid
Time: 1403 "requesting higher and direct Wilmington'
Frequency: 282.2000 (JAX Cntr?)

unid
Time: 1430 a/a ACM possible SHARK
Frequency: 138.4500 (a/a)

MAKO
Time: 1457 RTB 1517
Frequency: 285.7250 (AvonPark); 307.1000 (Miami Cntr-Pahokee)

MADFOX 4
Time: 1503 level 5500, looking for 5X

Frequency: 267.5000 (FACSFACJAX); 341.1000 (FACSFACJAX)

SHARK ##
Time: 1530 20 miles south of Placed; RTB due to fuel gauge problems.
Frequency: 292.2000 (AvonPark Rng Ctrl); 139.8000 (a/a); 285.7250
(AvonPark)

OMAHA 6CS; OMAHA 41SK
Time: 1624 possibly coming back from the mission they left for this
morning.
Frequency: 282.4250 (US Customs)

NASA 962
Time: 1627 Landing
Frequency: 128.5500 (KSC Shuttle Landing Facility Tower)

unid
Time: 1628 in the clear "all glazed, glazed on counter top".what is
this, description of donuts?
Frequency: 169.4500 (US Customs)

FE128
Time: 1710
Frequency: 120.9500 (FACSFACJAX)

It will probably work, and it's probably the best option for a handheld scanner. Grounding a base scanner will often do the same thing, but grounding isn't easy to do with a handheld.

Lloyd;

Try one of the bargain bin radios at

<http://www.grove-ent.com/hmpgbbb.html>

And check out the message board "classifieds"

<http://www.strongsignals.net/access/boards/classifieds/board.cgi>

Go to the other dealer's sites to check out used radios scanners.

Down load the manuals ON LINE before buying a used radio
to make sure it has the coverage and the features you want.
The reviews at strongsignals have links to manuals.
Having a manual on the computer will help you learn how to us
the radio scanner. If a manual goes missing or dose not arrive with the used
radio, you will have it on the computer. Manuals on line are available
for many other types electronic gear also!
Jim

1227. 780 Or 785 (w/o Card) For First Scanner ?

Newsgroup: rec.radio.scanner
Date: 2003-09-05 11:29:12 UTC
From: Robert11 <rgsrose@tiac.net>
Message-ID: <cs_5b.71$_26.23@newsread2.news.atl.earthlink.net>
Source record: 26430

Hello:

Going thru the "agony" of deciding on my first scanner.

I don't need digital, or 9600 capability.

Thinking of the Uniden 780.

How does it compare with the 785 (without the card) ?

*Other than having only 500 channels, anything else of significance?

Most of you folks find 500 channels is adequate ?

Other thoughts on, etc., would be appreciated.

Thanks,
Bob

There is no such thing as "Too Many Channels". Get the best that you can
afford. When you get to monitoring you will always want to hear more.

Three black rob a bank in a little one house town called Mojave, Kern County and ran in a white car. The ink pack went off, they changed into a stolen SUV and headed south towards Lancaster in LA county.
They have just about run all of them to ground including the two woman that were driving the SUV.

I have had the pleasure of listening to every work for the last two or three hours. What a chase, lots of cops out of breath from foot chases and the high pitched voice of the cops in the cars chasing them on the freeway and on the city streets. They have the dogs after the last guy right now.
This is what scanning is all about.

Bob,
Its always nice to have as many channels as possible.

However I have both, actually 7 BC 780's and 2 BC 785's. As far as the 785 does I really don't like the radio at all. It suffers from FM overload which reduces the real world sensitivity and it also suffers from intermod problems. Two things I have yet to have a problem with on the 780's.

I would only suggest a 785 is if you NEED digital. The 785 does digital just fine. The main reason I didn't sell my 785's is because I use them to monitor the NASA Kennedy Space Center 400 MHz Digital Trunk system. It does fine for this. However when it comes to trying to pickout distant stations in the MilAir range (which is what 99% of my listening is) the 785 sucks when compared to the 780.

You can see pictures of my 780's and 785's here:

The MilAirComms.com Log report for 9/4/2003
All times are Eastern Time, frequencies in MHz and
unless other wise noted modulation type is AM.

unid
Time: 0953 ACM
Frequency: 314.0500 (Tyndall WHETSTONE CTRL)

OHAHA 79A
Time: 0953 calling HAMMER
Frequency: 282.4250 (US Customs

D4V (who/type?)
Time: 0959 Flight ops/position to CAMSLANT Chesapeake 29-37N 86-59W
(about 100 miles SE of Mobile, AL)
Frequency: 8.983 USB (USCG)

unid
Time: 1003 ACM
Frequency: 361.4000 (Tyndall a/a & HaveQuck Timing)

BOBCAT 01
Time: 1004 Level FL270; High TACAN app to JAX Int.
Frequency: 254.3250 (JAX Cntr-Lake City)

CG 1706 (C-130 Clearwater)
Time: 1018 Departed Andrews AFB for Elizabeth City, NC (at same
time there was a strong ALE). 1706 then QSY's to 5.696 for radiocheck.
CAMSLANT comes in LC but 1706 is not readable.
Frequency: 8.983 USB (USCG)

KING 15
Time: 1116 getting field weather. They have rng scheduled for
1230-1330
Frequency: 292.2000 (AvonPark Rng Ctrl)

unid
Time: 1117
Frequency: 388.3500 (W470 Common)

KING 16
Time: 1134 Inroute to W158A - 31J; To meet the 71st Rescue Sqd out
of Moody.; 26 miles east of Ormond Beach.
Frequency: 267.5000 (FACSFACJAX)

NASA 529
Time: 1136 Up most of the morning looking for clouds. Sounds like

some sometype of research as there isn't any launchs scheduled.
Frequency: 126.6500 (KSC WX aircraft)

GULFTEST
Time: 1714 leaving 6Y, 7Y, and going to 3X & 4X
Frequency: 120.9500 (FACSFACJAX)

NASA 529
Time: 1716 landing Patrick
Frequency: 133.7500 (Patrick Twr)

A freekin men (AMEN)

The 785 is destroyed by overload or intermod. I live in Pittsburgh Pennsylvania U.S.A. not exactly the biggest city in the U.S.

I need to use a 1 inch antenna on the radio, no telescope, no outdoor, nothing but the 1 inch antenna, otherwise I get to listen to the local PBS television station on frequencies all over the radio, as well as various pager signals.

Admittedly this is a problem here, but I can handle it well enough with various Radio Shack scanners (I know, made by Uniden, but they are older models), an Alinco, and a Yaesu VR-500, but, as with the 785D, my Yaesu VX-5R is devastated by intermod.

Also the weather radio in the 785D is a joke. I've been communicating with Uniden and the Consumer Product Safety Commission to try to understand if the weather radio feature is a design problem or if the instructions are inadequate in the weather radio section.

Good luck, let us know what you decided.

Hi George:

Thanks for info., and all the help with my dumb, new-user- type
questions in the past. really appreciate it.

Have just about decided on the 780, but am still toying with the idea
of a handheld.

Can i assume the 250 has all the same problems that you described that
the 785 does ?

Any handheld equiv. to the 780 ?

What's your opinion on the display colors ? Like green better than
orange ?

Did they change anything else besides the color when they went to
green ?

Best regards,
Bob

I too have heard the changed the color to green on all of their scanners. All that I have are still orange so I canï¿½t confirm the rumor to be true. Iï¿½ve heard they did this because the green displays take less current to run resulting in less heat build up. The 780ï¿½s 785ï¿½s and the 250 scanners do get very warm. So green might be a plus here, personally I like orange better.

They have made minor changes in the software in the scanners however there hasnï¿½t been any really important changes. In fact I donï¿½t know what they did change. I know there were changes because when you check the Firmware Version number there are a couple different versions. Out of the 7 BC780 scanners I have I have 3 different Firmware versions but canï¿½t tell any difference in how the scanner performs. I wouldnï¿½t be too worried if youï¿½re getting one that has been on the shelf for awhile verses one just from the factory. Actually I only bought 1 brand new 780, the rest I had bought used and the newest one was probably manufactured well over a year ago. I have two 785Dï¿½s and both I bought new and they both have the very same Firmware version number.

Now about the 250D. Actually itï¿½s a pretty good radio. From a circuitry standpoint it appears Uniden did NOT copy the 785D after the 250D because the 250D is a MUCH better radio than the 785D. I donï¿½t

have FM overload or intermod problems with my 250 like I do with the 785. And the 250ï¿½s sensitivity is about the same as the 780 which is good. Although I really donï¿½t like the 785D (other than for receiving NASAï¿½s 400 MHz Digital system) I can say that Iï¿½m pretty pleased with the 250D.

There isnï¿½t a handheld version of the 780. If a handheld is what you decide you want I then would go with the 250D.

I've written my own scanner software, once piece of software will program any of my scanners so I don't have much experience with other packages. I wrote my own so I could interface it directly to my Access database where I keep 1000's of MilAir freqs and alpha tags. However I did buy one package, the ScanCat SE for $150.00. 2 weeks later I sent it back, many bugs with the functions I wanted to use. I did download a demo of the Butel (http://www.butel.nl/) software. It seem to be very nice and nicely priced. I've heard nothing but good things about it. Since I have 19 scanners in the shack, 11 of which are computer programmable it really doesnï¿½t make sense for me to actually run the scanners with a computer, after all I donï¿½t want 11 computers in my shack . And since I have 4 different types of programmable scanners (PRO-2052, BC780XLT, BC785D, and BC250D) I really didnï¿½t want to have to buy 4 different pieces of software inorder to program them. Since in a past lifetime I was a software applications engineer it was easier for me to write my own and have it do exactly what I needed.

I donï¿½t know how Butelï¿½s database is as I only used the demo. But many people seem to like it. I use Microsoftï¿½s Access database to store all my frequency information. With all the MilAir freqs I store and keep track of Access is very good. I can use it to store freqs, alpha tags, modes, military call signs and then have it spit out files with just the areas I need, example I can have it create a file with just Jacksonville Navel Air Stations freqs to program a scanner and it will interface with the programming software I wrote.

Hope this helps you some,
George

1248. ARC780 REG INFO FULL VERSION

Newsgroup: rec.radio.scanner
Date: 2003-09-06 23:57:41 UTC
From: MRQuickBoard <none@thistime.com>
Message-ID: <Gtu6b.61$T91.51892@news.uswest.net>
Source record: 26351

ARC780 REG INFO READ HOW TO USE BELOW.

name: Registered
key: 468360

For their ARC 780 Software all it did was put a file called WINSOC7.DLA in your windows system directory if you delete that then the reset command will not be sent to your radio and the software will be fully functional. If you use the reg. info above and the software dont run you have WINSOC7.DLA on your computer delete this file and it will work. just remember dont hook your radio up untill you delete WINSOC7.DLA or it will reset your radio

HA! Good one Dwayne! I know what Burr meant but it was still funny.

Also, if anyone is interested, I've got quite as few recorded audio files of pursuits and other stuff including the SWAT shootout with the suspect that took the life of LA County Sheriff's Deputy Stephen Sorenson back on August 8, 2003.

I've looked into PAR filters, but I need to know the offending frequency. The problems is that PBS broadcasts the same shows on TV channels 13 and 16, therefore I don't know the exact frequency. Do I poke and hope that I guessed the correct frequency? Is there something available that has a broader range of application?

Thanks, I'll look at the site that you provided.

Regards.

1260. BC250D puzzle

Newsgroup: rec.radio.scanner
Date: 2003-09-07 19:19:13 UTC
From: Xxxxx <Not_gonna_give@all.com>
Message-ID: <RwL6b.12157$ae6.534@nwrddc01.gnilink.net>
Source record: 26363

I've done conventional scanning for over 30 years. However, I'm new to trunking. And, while I understand how trunking works, I'm having a devil of a time trying to get the BC250D to do trunking.

I don't know if there is an assumption I'm simply not assuming, or what. But, there's something I'm simply not getting. I programmed Fairfax County, VA's 20 trunking frequencies into Bank 1 (channels 1 through 20).

I *think* I programmed a bunch of talk group IDs into M1-1 through M1-0, and in M2-1 through M2-7. At least, they seem to show up there when I inspect the Talk Group settings for Bank 1.

I then set Trunk Type to On and Type2 800 (which I've been told is correct for Fairfax County).

After that, I hit the scan button. It appears to be scanning Bank 1 (as well as any other banks that are selected), but will only stop on conventional frequencies.

It doesn't show any talk group IDs. I've read here that you press the "." to toggle between Bank and ID. However, pressing "." simply displays the Reverse frequency for the current channel. Nothing I do can convince it to display talk group IDs.

I've tried pressing the Trunk key... It stops the scan at the current channel (whatever happened to be whizzing by). If there's a transmission on that frequency, it then lets me hear it, but it stays on that channel/frequency, and does not track the conversation onto other trunking channels.

For some reason, when Trunk Type is On, the scanner refuses to stop on any of the trunking channels. I hear more of the complete conversation if I set Trunk Type to Off, and scan as if they were conventional (albeit digital) channels.

I keep reading that you're supposed to press the Search button. But, when I do that, it wants to search programmed ranges... it doesn't seem to have anything to do with the trunking bank(s).

There's something I'm simply not understanding. I've read the owner's manual cover to cover several times, but still don't understand what I'm doing wrong. Pushing the various buttons doesn't seem to produce the results they're supposed to produce. It's as if there's some magic mode setting key combination that I'm simply not seeing.

Help!

Okay... I did that. But, when I hit Search, it just searches Range 1, rather
than the bank containing the trunk frequencies.

If they are in fact, encrypted, then their statement is correct. "Digital", and "encryption", are two, totally different things, and many get them confused with each other. Best way to be sure, contact your police, and ask them.

I havent been following this thread but do you have the comm port set
right? Are you using a Serial-USB adapter? It could also be the cable
you are using is the wrong one.

Huge thunderstorm today in town, had a strike that I saw out my south-facing window and there was an *instant* boom. Five seconds later local FD is dispatched to a fire on a telephone poll as the stike blew up a transformer, 10 blocks away.

I know, not as exciting as what some folks have posted recently, but here in Podunk, Az., population 24, its pretty neat.

There was a big transformer down at the end of the street where I used
to live. One day a storm went through, and there was this huge BLAMMMM!
and the lights went out and smoke is coming over the tops of the houses.
I go down there,and the transformer, one of those big green ones that
sits on the ground, was blown off it's perch and it has been totally
destroyed. The power company brought a semi in with another transformer
on the trailer to use as a temp until a new one arrived.

I don't remember how long it was, a week or so before the got the
replacement in, but after dozens of power failures during that period,
they got it in and then, IT GOT HIT AGAIN!! It was even louder the
second time, for some reason, and instead of getting knocked off it's
perch, it had a hole in it about 6" accross with the edges of the hole
looking like it was cut with a torch.

It only took a few days to replace this time, my dogs went nuts
everytime the power went off due to the smoke detector sounding off
every time the power came on. Between no sleep from the dogs, and not
much A/C due to the power outages, it wasa long couple of weeks.

>
>I've looked into PAR filters, but I need to know the offending frequency. The
>
>problems is that PBS broadcasts the same shows on TV channels 13 and 16,
>therefore I don't know the exact frequency.

Hiya-
The three different Par models offer rejection in the 152, 158 and 462 MHz ranges... and if I'm not completely off, over-the-air TV channels 13 and 16 fall outside that range (13 is in the range of 211-216 MHz, and 16 is in the 482-488 MHz range)... so Par may not be able to help you in your case.
You could try building your own stub-type filter, attaching a 'T' connector inline with your antenna lead-in, and attaching a specific frequency-cut, open-ended stub of 50 ohm coax to the 'T' section (perpendicular to the antenna lead-in)... the formula to find the stub length should be:
(75/Freq. MHz) x 0.67 = Stub Length in Meters... I couldn't find a formula that finds the length in inches, but I'm sure it's out there!
The exact freq's you need to notch out (I just found a book that has them) are:
Ch. 13 Pic-211.25, Audio-215.75
Ch. 16 Pic-483.25, Audio-487.75
So you can see the commercially available Par filters probably wouldn't ultimately reject the freq's you need to kill.
Try a search for home-built stub and notch filters. There are some ideas out there.
Good luck-
Linus

These are fairly common events in Manhattan. Since Manhattan has only underground electric service, these explosions also blow manhole covers high into the air. It is awe inspiring to watch a 300 pound steel cover shoot 10 feet or so straight up.

Of course, if your car is on top of one at the time...

Uh oh, better get Maaco.

Thanks for this story. It confirms something that I *thought* I
remembered, from a winter visit to NYC circa late '60s, when I was
around 10 years old. I was walking down a sidewalk when a manhole cover
in the street shot up a good 10' right next to me in a shower of sparks;
over the years I've been thinking that I must have misremembered - no
way a manhole cover would really have flown up that high! It's good to
know that my memory of this could be correct.

As I recall, I couldn't have been more than 10' from it when it blew. I
was very impressed at the time at the kinds of shows NY put on for
visitors, and that the cover came back right down onto the hole!

Not familiar with the Alinco radio, but does it require a stereo, or a mono, plug on the cable.

Radio Shack PRO92, 93, 95 scanners require mono, and will work with a stereo/mono adapter on the end of a cable which has a stereo plug. Such adapters are available at Radio Shack, and other such suppliers.

Incidently, the plug is on the cable, the jack is on the radio. Plugs are male, jacks are female :-).

>I am new to radio scanners. My question is:
>
>What is Trunking?
>

Simply put, Trunking is a computer controled system of radio use management.

It sets priority and imput of users on the radio system.

See:
http://www.trunkedradio.net/
http://home.att.net/~wwhitby/

For general info.

Not all areas are using Trunked Systems and as may be noted in an earlier Post, some departments may have gone Trunked but the patrolman still use the conventional system for informal talks and chats.

Do a Search via: Google or other engine under the terms " Scanner Radio" , "Trunked Radio" to learn more.

Also, Police Call will show if your area is Trunked and what type of system is used.

Look at:
http://www.modelaircraft.org/Comp/frequency.htm

Most Clubs require the display of used frequencies at fields and such, can you guess what would happen if 3 or more people were using the same radio frequency.

Try a search using:
"RC Frequencies"
to learn more.

Hi Jon,

It only takes ONE person in the pit to turn on his transmitter to shoot down a fellow pilot. If they are on the same freq, it is common courtesy to wait till the other pilot is done. Usually a time limit will be set when sharing freqs. When a pilot arrives at the flying field, he places his AMA card on the freq board. If you share the same freq, you place it behind the other pilots.

Brian

<kevin.gribben@ntlworld.com> wrote:

>Still getting the same message "A communication error occurred 1" then i
>press ok then get next message "cannot find dj-x3"
>
> But scanner screen still says OK

If the scanner display shows "OK", it means data is sent correctly to
the radio. This means that your COM port setup is correct and that the
electrical connections to the radio are OK (data is transmitted and
received on the same pin, so you cannot miss one and not the other).

The error message means that the program does not receive the reply
from the radio. This means that either your interface cable has a
fault which prevents the data from the radio reaching the computer, or
you have some software problem that prevents the program from
detecting the incoming data from the serial port.

To test a little more, start Hyper Terminal. Configure it to *not*
"echo typed characters locally" (clear the check mark), 9600 bps,
XON/XOFF, no parity. Also, clear the check mark for "Send line ends
with line feeds".

Now connect your interface cable to the computer, but do *not* connect
your radio. In Hyper Terminal, hit "enter" a couple of times and then
type some characters. If you can see what you type, the interface
cable is OK, and you have a software problem. If you cannot see what
you type, you have a hardware problem.

I have read people claiming the software does not work with XP, but
for me, it works perfectly, both with Windows 2000 and Windows XP.

Hi all,
I have the AR 8200mk3 & the AOR datacable with home made discriminotor audio out to PC Sound Card.

I am able to record audio via the connection to my SoundCard but when I put the AR8200mk3 into WFM mode the audio out via the discriminator stops.

Is there a reason for this?
I'm trying analyse hi speed data links >=1Ghz and it would be great if I could record in WFM mode as NFM cuts some of the hi frequencies out.

Any ideas please reply.
Cheers,
Xanax.

You will need written permission from the fire department administration to
decode the digital transmission. Then you will need to buy the equipment and
software from the vendor(s) and obtain the proper software licenses. If you
do anything else you will run afoul of several Federal &/or State laws
and could put your job in jeopardy. Consult a lawyer for proper guidance.

^ You will need written permission from the fire department
^ administration to decode the digital transmission.

That isn't true. Teletype is an authorized FCC emission type just as CW and AM, SSB, and FM voice are. Teletype is a transmission format, it is not a method of encryption.

^ Then you will need to buy the equipment and software from the
^ vendor(s) and obtain the proper software licenses.

That isn't true. There is a plethora of software, much of it freeware, written for teletype reception. Look for the software on ham radio web sites. No hardware beyond your PC and scanner is necessary.

^ If you do anything else you will run afoul of several
^ Federal &/or State laws and could put your job in jeopardy.

That may or may not be true, but the governmental agencies and the employer would be in the wrong and subject to civil proceedings.

Frank

Keith <XSu7b.5136$PE6.4193@newsread3.news.pas.earthlink.net>...

^ Obviously your knowledge of Federal and State laws is nil.

Which laws are you referring to? Can you point to any court decisions to validate your claim? There are no federal laws that prohibit listening to teletype. All federal law prohibits is listening to certain personal communications, such as cell phones. Teletype is regularly listened to and interpreted around the US and around the world.

Any state can write whatever silly law it pleases, but many of those laws don't pass the test in court.

1324. USS Enterprise Strike Group off the Florida Coast

Newsgroup: rec.radio.scanner
Date: 2003-09-10 18:38:21 UTC
From: GeorgeF <av8tor@licensed4funREMOVEBEFOREFLIGHT.com>
Message-ID: <3F5F6F9D.50004@licensed4funREMOVEBEFOREFLIGHT.com>
Source record: 26327

Hereï¿½s your chance to catch some comms, both UHF and HF, of an Aircraft Carrier Strike Group. It appears weï¿½ve got the USS Enterprise off our Florida Coast. From previous aircraft calls it appears to be SouthEast of Jacksonville, donï¿½t know distance.

However comms are up on 5399.5 KHz USB, excellent sigs here in Daytona Beach FL. Also heard comms this morning on 381.7000 (STRIKE freq). Both freqs are booming into Daytona.

Other freqs which might be used will probably be those of FACSFACJAX which can be found here:
http://www.milaircomms.com/uhf_facsfacjax.html

Previous freqs used during Carrier operations off our shore are:
236.4500 STRIKE - CD Flights
290.5000 Charlie Delta A/A
362.4750 Charlie Delta A/A
362.6000 Marshall
363.7000 Marshall
366.8500 STRIKE Button 3
369.3000 STRIKE
375.7000 SCREWTOP
381.7000 STRIKE
385.3500 Marshall
387.4500 Carriers off Fl Coast

Thanks to MAC in Georgia for the Heads Up and Iding this as the USS Enterpriseï¿½.

George

Just heard SCREWTOP ask to go to their secondary freq. After putting a few scanners in search I found them on 266.6500, so thatï¿½s what theyï¿½re using today as their secondary freq.

Hereï¿½s the freqs being used today by the Carrier Strike Group:
5399.6 USB
266.6500 Secondary SCREWTOP freq
387.4500 SCREWTOP
381.7000 Strike

Plus all the normal FACSFACJAX freqs are active, listing and maps here:

Can we get some details on the problem you're having? I'd like to check this out myself. I have both radios at my disposal, infact
my 250D is here in the office with me today.

Maybe one of us knows the answer. It wouldn't be the first time someone here knows more about a product than a "customer-no-service"
rep.

You might try downloading TrueTTY (small fee for registering but you
can try it out for free). It decodes Baudot Teletype (RTTY) and
ASCII Teletype among other formats. All the extra hardware required
is a male-to-male audio cable from your scanner headphone jack to the
line-in jack on your PC.

I've seen cards that can be put into a PC to do that, or out-board devices that will connect to a PC, but no warnings from the ads about it being illegal. I would think it would be necessary to warn people about it being illegal if the feds had a prohibition about that. If you can interface your scanner with the PC via a RS 232 cable and have the right software, or can afford the outboard option or a PC card, I see no reason you could not do what you would like.

The Enterprise uses radio frequencies? Did Starfleet install a backup comm system on the 1701D?

Don't remember the 1701D using ordinary radio for contact with the fleet..

Wonder if Captain Picard asked Geordi to..

oh wait a minit...

Hmm.. Oh that Enterprise...

Yeah...like active duty military personnel.....the men and women
defending our country.

> OR,the confusing ballots...

Only for the illiterati......

>or votes not being counted.

As in all the dead folks who "voted"?

>or people being turned away from the polls

Didn't happen.....except for the military....

Give it up already. The votes are in, Gore lost. He tried to backstab the
very veterans he claims to be one of.
Thank God that Al Gore wasn't President when 9-11 happened. He would have
surrendered.

The Rat Shack Pro-95 overall is a good model, and I enjoy it. The only
MAJOR function I wish it had was tone scan and CTCSS (tone decode) as there
are times for me when a locally used frequency is overrun with "skip"
stations. Aside from lacking that, I love the Pro-95.

Using the standard supplied antenna, should this receiver still be fairly lively on medium and long wave, or is it very deaf down there and needs an external antenna?

If the latter, is there a max length to avoid overloading the receiver?

Reason for question, just bought one, and can hardly hear anything below 90 MHz, but putting an indoor wire about 20 feet long on it causes it to totally crossmod right across from 100kHz to 30MHz.

Why wouldn't I want to do this?
I would like to purchase an amplifier for my scanner antenna. I saw a
cable tv amplifier with 10db gain for the frequencies 10 - 900 mhz.
Why wouldn't this work; or would it?
Remove the "123" in my address to reply by email!

>Why wouldn't I want to do this?

Possible reasons would include having enough intermod/bleed/noise on your scanner as it is BEFORE adding the amplifier, in which case the amp would only make it a lot worse. Also, if you have some noise but not much, but the amp will boost signals below 30 MHz, you may find some added interference from signals in that region.
IF it boosts FM freq's as well, you have that to deal with.
That said, though, if you already have a fairly clean system and just want a bit of a kicker in receiving fringe stations, etc., there's no reason it shouldn't improve things overall.
Just make sure you place it AT the antenna, not at the scanner... you want to boost as much signal as you can BEFORE the noise added along the feedline, etc.
Good luck-
Linus

Message-ID: <3F611417.5010003@licensed4funREMOVEBEFOREFLIGHT.com>
Source record: 26263

LL71 is over a small boat with 4 POB. Boat does not appear to be sinking however is dead in the water. SCREWTOP is relaying comms from LL71 to SEALORD on 267.5000. US Coast Guard ship is in route to the small boats position. Position is 30-22 N, 80-13 W which is about 70 miles east of Jacksonville, FL.

LL71 wanted a freq in which they could be in contact with the USCG ship. LL71 was given freq 2.182 MHz (USB). I have not heard comms yet on that freq as of 1749 EDT.

LL71 has been requested to stay on scene until USCG ship arrives, ETA about 2 hours.

SCREWTOP has informed other players in the USS Enterprise Strike Group exercise of this situation on 310.2500.

1361. More Vessels In Distress, F-18’s diverted to assist

Newsgroup: rec.radio.scanner
Date: 2003-09-12 00:32:53 UTC
From: GeorgeF <av8tor@licensed4funREMOVEBEFOREFLIGHT.com>
Message-ID: <3F611435.1020108@licensed4funREMOVEBEFOREFLIGHT.com>
Source record: 26264

I went out for dinner, when I came home I hear two more boats are in distress. Vessel #1, name Kimber Lucky is being escorted to port by ship callsign CHARLIE. Vessel #2, location 31-05N, 80-02W, about 110 Miles NorthEast of Jacksonville. 2 F/A-18ï¿½s have been diverted to overfly the second vessel.

Freqs where comms regarding this SAR are:
5399.6 USB (USS Enterprise Strike Group)
310.2500 (Callsign Screwtop, relaying comms.
156.8000 FM (Marine Channel 16) Hear USCG Mayport and another unid, possibly SCREWTOP.
157.1500 FM (Marine Channel 23A) USCG

Also hearing comms on 243.0000 UHF Military Emergency freq, too many radios going off at once, not sure if these comms are related.

These boats should feel lucky that there is a large military exercise in the Atlantic off the Florida coast.

George

It will work, if you go here:
http://www.milaircomms.com/antenna_mounted_amplifier.html you'll see an article I wrote about my experiences about using a TV amp. In the article I used an Antenna mounted amp.

I've also used a wideband amp for receiving Military Satellites in the 260 MHz range. You can see this at:
http://www.milaircomms.com/shack.html just scroll down until you see my Handheld and homemade 5 element Yagi.

In short if you do it rigth it will work wonders. If you add it and start picking up FM Overload and Intermod you might want to invest in some filters. Depending on what I want to hear and the direction I aim my beam I will have some problems. However once I insert my Hi Pass Stridsberg Filter 99% of my problems go away. The HiPass filter I'm using will block signals below 225 MHz. Since 99% of my listening is MilAir this is perfect.

Mount the scanner on a kite and use external speaker wires as the control string. This technique will overcome problems of loss on a long feed line. A balloon will work too.

Frank

Poor sensitivity, weak audio, tinny construction. Compared to my old Bearcat and newer AOR 8000, it's just not made as well, nor is the reception as good. Signals heard strongly on other scanners fade in and out on Pro 96. It's going back.

Caught the end of the conversation. I'm not sure if SCREWTOP was in direct comms with CHARLIE or not. I think CHARLIE was talking to USCG Mayport, who via phone was relaying to SEALORD in turn relaying to SCREWTOP.

Message-ID: <3F613053.5050601@licensed4funREMOVEBEFOREFLIGHT.com>
Source record: 26270

With the extra amount of Military traffic relating to the USS Enterprise Strike Group Exercise (http://www.news.navy.mil/search/display.asp?story_id=9460) I simply haven't been able to log all the traffic. But here is just a sample of what I could log in the last two days. Even if you have no interest in UHF or VHF will even have a chance to catch some comms on HF (2370 KHz & 5399.6 KHz USB have been just about non-stop).

If you're in the Florida or Georgia area and have wanted to give MilAir a try here is your chance. Start by programming in the freqs from my following logs and if you actually have your coax plugged into your scanner you WILL hear something. If not, return your scanner for repair J Heck even on a rubber ducky I've been getting many commsï¿½.

The MilAirComms.com Log report for 9/10/2003

I love my ScanTenna. In fact using a combination of two Stridesburg Amplified Multicouplers (seen here: http://www.milaircomms.com/review_stridsberg_mca204.html) it drives 11 of the 19 scanners in the shack.

I can't think of any minuses at all. It is a non-dirctional antenna, so if you have interference in the area you can NOT null it out by rotating the ant in a different direction. Because of that I don't use a pre-amp on the ScanTenna. However I've had many non-directional antenna including $110 discones. The ScanTenna puts any discone to shame...

About the only think I've found that is better than the ScanTenna would be beams such as the ScannerBeam or the Create Log P.

you might want to try a ScannerBeam (found at http://www.AntennaWarehouse.com) to receive that one signal you're trying to get. You might have better luck doing that, and if that still doesn't work then add a pre-amp to the ScannerBeam. If you try to add a pre-amp to a non-directional antenna you'll increase your chances at picking up FM overload and other interference related problems. Not saying it won't work but saying your chances will be better with a beam.

Try a beam. If necessary point it at large metal obects and hope for
reflections. Best signal may NOT be on a direct line to the repeater.

Curious to know if it'll track the new Phoenix/Mesa APCO system. They've concluded their testing on it and the only active comms
I've found in the past few days on it have been encrypted. But, it would be nice to start actually trunktracking it instead of just
demodulating the audio, in preparation for when they throw "the switch" and light it up for real.

The amplified Multicoupler only has a 4 dB amp, just enought to overcome the looses of the multicoulper itself. You can buy an un-amplified multicoupler however each scanner connected would experience a 3dB loose in signal.

A pre-amp is an amplified designed to actually increase signal, usually 10 dB - 30 dB.

FWIW, if you can get you antenna higher, that might help. If the signal flying is heading for outer space, you won't hear it any better with an amplifier. If getting the antenna a few feet higher will help, it might be worth a shot. Just use high quality coax to minimise loss.

Police have declared a full-scale security alert at Gatwick airport after a "suspect vehicle" was found abandoned near the south terminal.
Bomb disposal experts are on the scene, and the south terminal has been evacuated and closed, Sussex police said.

The perimeter road and the A23 leading to the West Sussex airport have also been closed and cordoned off since the vehicle was discovered at 2100 BST on Friday.

Police have warned there will be severe congestion on both roads, and are urging people to stay away from the airport unless absolutely necessary.

Passengers are also being asked to check with the airport for flight details before beginning their journeys.

As the south terminal - one of two at the airport - runs parallel to the airport's railway station, major disruption is also expected to rail services passing through Gatwick.

No one at Gatwick airport was available to confirm whether any flights were arriving or departing from the south terminal.

I reply:

I purchased one here in Michigan and find it to be equal in sensitivity and image rejection to my previous scanner, the BC-245 (Uniden TrunkTracker 2) on standard FM and analogue trunking. I live about a block away from 4 powerful commercial FM stations, putting out a total of 125,000 watts of rock music. The PRO-96 doesn't suffer from any interference.

Since our State Police use 9600 baud APCO-25 trunking, I'm able to hear our State Police for the first time on this scanner. I can hear two different State Police trunking transmitters from my location in Oak Park, MI and it follows the conversations flawlessly.

Ergonomically, it's fine, just different from the Uniden Bearcat model. One of the best features is that you only have to program in the control channel of a Motorola Type II or APCO trunking system and it'll find the whole system. On the Uniden, you had to program in each frequency used by the system. Thus, I use only two channels in a single to trunk both State Police systems that are within my reception range. Also, I like the single priority channel for the entire scanner. On the BC-245, each bank had its own priority channel.

Perhaps Lynn got a poor sample of the PRO-96.

For scanner users here in Michigan, the PRO-96 seems to be the best solution for a "full scanning package" that's unmatched by any other available scanner.

If you bothered to read what was written you have seen the part about
"Pentium 4 computer that runs TrunkStar780, ARC780, SanPro780, Java780 and
CC780 just fine" So I guess the answer to your serial port questions is
"Duuuuuuuuuuuuuuuuuuuuuuuuuuuuuuuuuuuuuuuuuuh" geeeeez i don't know....

> Do all those nice modern computers have serial ports, or are you using
> USB adaptors??????????????

Thanks Joe,
Be sure to check out my Audio Library at
http://www.milaircomms.com/audio_library.html as I just put on some new
comms from the USS Enterprise Strike Group exercise including some
bombing raids on our local range....

Have fun,
George

And if you bothered to setup the comm port and the baud in ID Tracker
then it would have worked for you. You guys really need to stop testing
software if you cant learn to setup the software you are testing. You
bash a program just because you dont know how to use it. Also what does
the pent 4 computer and the other programs have to do with it? NOTHING

^ handheld that can cover amatuer bands and aircraft
^ (50,108,144,420mhz). ... 50 channels ....

Most scanners have that plus much more. To get just that you'd probably have to go back to a model designed prior to 1990. If that's all you want, just go for the cheapest you can find. But if you want SSB on the ham bands you may need to look at the newer models from Icom, Yaesu, Kenwood, etc., almost anyone but Radio Shack (Realistic).

1407. Antenna grounding.

Newsgroup: rec.radio.scanner
Date: 2003-09-13 20:06:42 UTC
From: kjfj <kjfjj@cox.net>
Message-ID: <_NK8b.54626$uh6.34483@lakeread05>
Source record: 26210

If someone could clarify (Excuse the pun) this for me i'd appreciate it.

I bought this antenna to use on my AOR 8600
http://www.scannermaster.com/store/13-540457.html
It's a lot better than my old discone and beats the Scantenna on 50/145/440,
I mainly bought it for its advertised 500KHz-1500MHz bandwidth and it's a
truly great antenna.
The thing I'm confused about is grounding, I have it on a 30ft pole outside
my apartment in a 6ft concrete base, the soil is mostly clay. If I run a
heavy gauge braid from the top of the pole where it attaches to the antenna
into a copper groundstake would it reduce my noise level on HF? It's also
impractical to drive a 6ft stake into the ground however there is a
grounding point 6ft away.

Thanks for any help, if anyone's looking at buying a wideband antenna I'd
definitely recommend this one.

You want to ground the receiver, not the antenna. And it would help reduce the noise a bit, and increase the signal strength of the received signals.

If you had a longwire antenna or if you live in thunderstorm country, there are devices to help remove static from the antenna before it reaches the receiver, and devices for shunting lightening to the ground. But the antenna should not be grounded.

From the manual, page 7, I found the note below.

If a power failure occurs or if the power
cord is disconnected, the scanner's
memory backup circuit keeps information
in memory for up to 3 days.

Note: The memory backup circuit begins
to protect memory within a few
minutes after you plug in the scanner.

The behavior described implies that a capacitor is used to backup memory,
not a battery. If you keep the radio plugged into a live AC outlet it should
retain memory when the radio is turned off.

The parts list shows a 0.47 Farad 5.5 volt supercap and that is almost certainly for memory backup. It might need to be replaced or the circuit that charges it up could be bad. You'll probably need a service manual to get into it much deeper.

no it's capacitor dischage circuit.

follow the reset routine for the radio, the processor might be having
trouble with all the flat outs.

also it is worth checking the radio on a 12vdc supply or battery.

does it do the same??

if not maybe the internal PSU is low on volts not allowing the cap to charge
though i think it's a 5volt system??

^ I'm down south and I have an RS Discone that I want to put
^ up. CAN I put a splinter in the line and feed two locations??

Yes. There will be some signal loss but with a high gain antenna you may not notice it. No need for a split, just put a T on one of the scanners.

I don't know why a multiplexor would be necessary -- I've been using two antennas on four scanners with no trouble. I have a dipole feeding two scanners and a mag-mount feeding two more.

When you're dealing with receive only antennas most of the antenna rules are mostly irrelevant. You don't need a phased harness or a balanced system. I had one antenna system that worked very well and consisted of a long horizontal dipole joined at the scanner with a four-band mag-mount scanner antenna and an 800 MHz coax antenna. I had three T connectors on that scanner and I would sometimes join it with another scanner.

3rd party answer here ... I have a 95 and I recommend getting the Radio Shack special 800 meg rubber duck. It works, and works great! Much better than the stock antenna.

But if you're using it in a car you may want to use an external antenna instead.

I had the Diamond and gave it to the garbage man. After using the AntennaWarehouse ScanTenna (http://users.cis.net/kingpop/Scanner/Scantenna.htm) I won't ever buy a Discone again.

First you need to remember that a Discone has no gain.

Since you only have two choices I would pick the MON-3 simply because they at least advertise some gain where as a discone is a unity gain antenna.

1435. Infrared Remote Control for BC780XLT and BC895XLT

Newsgroup: rec.radio.scanner
Date: 2003-09-15 01:25:01 UTC
From: sales@swl-remotes.com
Message-ID: <3a16aa07.0309141725.57af5628@posting.google.com>
Source record: 26238

Hello All,

We at swl-remotes.com have developed an Infrared remote control for the Uniden BC780XLT and BC895XLT. Now you can control your scanner from your easy chair. You can initiate scanning and searching; control bank selection and manual modes; enter bank search limits; and store frequencies and modes to memory channels on the BC780XLT and BC895XLT using a common TV Universal Remote. Directly entered frequencies or searched frequencies can be stored into memories using the remote.

The Infrared remote interface unit can also be powered by 12VDC along with the scanner for applications where the scanner is to be run from a 12VDC source.

Check it out for yourself at our website:

http://www.swl-remotes.com

I also have the PRO-95 and love everything about it. When I bought it
I knew it would spend alot of time in my truck so I also bought the
multi band mag mount that rat shack sells.. The only problem I have
had with it is trees, being that it is on the roof of the truck. It
hasn't ever fallen off up to 85 MPH.
And it works MUCH better then any radio mounted antenna you could
buy.. YA need to get that antenna out of the metal vehicle to get
decent reception.
For walking about, the stock rubber duck is ok, but the lenght of it
gets on my nerves a bit, so I am going to make something, or try out
one of those stubbies.

1438. SCVA? on a fire channel

A neighbor's mobile home burned last night. At one point they said anyone not wearing an SCVA was to leave the remains of the coach. What is that? SCVA?

If I am remembering the acronym wrong, my apologies.

It is amazing how fast mobile homes become completely involved. It to 40 minutes before the fire was under control.
